This auction is for ONE Milcom 900 Mhz linear Amp.
Model #P15-05LI-C1
Power in= 150mW
Power out= 150Watts

This is the mother of all amps. Milcom has designed a great pre-amp, so you only have to drive it w/ 500 mW. As you can see in pic #1 this was on 935Mhz, so it should work well in the 900 ham band. I think this unit was last used for some kind of linking. Milcom made this for Uniden.

Yes, this is a True Linear amp.

Thanks for looking.

For what it is it is an excellent radio. What do you think when they put hf/2m/440 into a single box smaller than a lunch box.You are not going to get a 1000D/776 etc? I have worked all continents from my mobile, audio reports are excellent, and the receive from my High Sierra antenna cant be beat. Say what you will but, for the money you can't match it. I will have to admit there are a lot of new operators not willing to give an honest report. I have heard some junk audio and everyone keeps saying it is great even if it is full of RF or FMing. Come on guys tell the op the truth and we will all be better off. Don't worry about hurting someone's feelings. I for one, appreciate an ones opinion.

That's easy, just look at the wiring on the MD-1 and compare it to the schematic for the mike on the 847- in the owner's manual. I suspect that the 847 uses one wire with a resistance change to determine up/down direction, whereas the MD-1 probably uses a separate wire to ground for each direction.

I'm looking to buy a 40-60 ft Tower. Crank-up or non crank-up. What do you have ?? Needs to be delivered or shipped to the Reno,Nv. area 89433 zip.

I'm also looking to buy these items :

6 meter verticle

2 meter yagi's or satillite antenna's
430-450 mhz yagi's or satellite antenna's

Also need a 2 meter bandpass filter (intermod problems from near by tv and fm broadcast transmitters)

Contact me at ki0pa@yahoo.com

or at 775-250-3972 cellphone or 775-673-2410

Thanks

Tom ki0pa

So- you think the radio was made in Japan??? WRONG!

Try reading occasionally. You'd know that Kachina
manufactures their radios in Arizona....it's some
kind of Indian name I suppose. Wanna try again?

> I just bought a van with a raised fiberglass top. I need a two meter
> antenna that I can use that does not require a ground plane.
>
> Any suggestions?

For this, you need a half-wave antenna. It requires a matching
network, but no ground plane.

> Also I need a twenty and forty meter antenna as well.
>
> Any suggestions?

Forget it. You absolutely MUST have a ground connection to
chassis for an HF antenna to work properly from a mobile.
Unless, that is, you use something like an AEA or MFJ remotely
tuneable loop antenna (expensive). You might try something
I've always wanted to try- find a nice big butterfly capacitor,
and run copper tubing around the circumference of your roof,
sort of like a luggage rack. Raise it off the roof with plastic
pipe. Connect the capacitor the same as AEA or MFJ does. You'll
have to get out to adjust it. Should work all HF bands 80-10m.
Also, you can paint the tubing to match your vehicle.

Good luck -Web, KR4WM in Myrtle Beach, SC

I'm getting a new radio, so I have a nice Kenwood TS-150S for sale.
Cosmetically it's about an 8, operationally a 10. Good finals and driver.

160-10m, no WARC, with 19m receive (15.000-15.600)
Comes with operation and service manuals and
nice MC-50 desk mic. plus will throw in a Vectronics 300 watt 50 Ohm
dummy load.
Asking $400 for the lot, will ship anywhere in the US.

Also have a Vectronics PM-30 300 watt cross needle SWR/Power meter with
built in
dummy load for $50.

10. Repeater freq near receiver freq?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-01 03:17:24 UTC
From: Shawn Reeves <kleptein@hotmail.com>
Message-ID: <ln4tjtgqv025jtqmc67mpd0ob9594e1ok8@4ax.com>
Source record: 57914

I'm considering placing a receiver at a site of another club, and am wondering how much of a problem I'm going to run into. The site has a repeater on 146.760, 100 watts or so.. we have a special receiver that would (theoretically) work well at this site due to its height and loction, but I fear there may be a problem. Our receiver is on 146.715. Is their repeater going to completly blow the socks off our receiver? The receiver is just a "card receiver" that we took out of an old MSR2000 repeater station. Their transmitter is a modified GE MASTR II I believe.. it looks pretty clean, but still, its only 45 kHz away.

Any comments? Am I nuts to even consider this?

Hi all

I was just in one of the local pawn shops and they had a Icom IC 281H for sale for $145.00. I have not been able to find out much about it on the net and it doesn't have a manual with it. I was wondering if anyone out their had a owners manual that was downloadable or knew of any site that may have one? Any help would be appreciated and thanks in advance

Why forget it? Why not just mount the HF antenna in the center
of the fiberglass top and run a ground wire over and down,
connecting to the nearest part of the metal body?

Bill, W7TI

19. Re: Help with mobilke antenna????

One reason is that that "ground wire" is then part of the active radiating portion of the antenna system. Depending upon frequency, wire length, etc., it could (a) work great; (b) not work at all; or (c) screw things up so badly it will neither load nor radiate effectively.

Any "ground" connection from the braid of the coax to the vehicle chassis/body must be as short as humanly possible to function as a true "ground" connection and not as an extension to the radiating system.

What will happen is that however long the "ground" wire is, it
will be included in the overall length of the antenna. On the
lower frequencies this will not be too important but on the
higher ones, you may find the antenna is resonant at too low a
frequency and will have to be trimmed to maintain resonance.

I found this out the hard way once when I mounted a Hy-Gain 4BTV
on my trailer. Trying to be clever, I mounted it up on a four
foot pipe extension off the bumper. Worked fine on 40 but would
not tune on 10. It finally dawned on me that I had increased the
overall length of the antenna by four feet. I could have
shortened the 10 meter section but I took the easy way out and
just mounted it directly on the bumper. Worked fine then.

Mounting the gentleman's HF antenna on the fiberglass top will be
a similar situation with similar results.

As they say in New Yawk: "Fugetaboutit" Although you haven't said how far away the transmitter is, I'm guessing you want to mount your antenna on the same tower. With lots of notch filters you might eliminate the 146.76 signal, but you won't get anything through on 146.715 either. The first thing you need is a lot of physical separation.

Yes, interesting little goody they're showing. I wonder how it differs from the current PRO that I haven't bought yet (and might not for a while)? Perhaps this is why all the Icom rebates grew last month and are due to expire shortly - trying to get rid of all the old stock. Parlez Vous Japanese, or Sprecken zie Sushi?

How do these 2 rigs compare???? I know the 746 doesnt have UHF capability - but considering 2 meters and HF - is the TS2000 worth the extra money in features??? I here the stock 2.4 filter works fine in the 746 so is digital filtering really needed for the money??? Any comments between the 2 radios would be appreciated.

The catalog price is $229. It's probably an okay deal, if you think 7/10-watt
output power is all you'll need.

One thing that can cause this is if your injection frequency is not properly set. Typically, the injection frequency to you balanced modulator should be around the
-20 to -25dB slope on your I.F. filter. In your operating manual, or the service manual, this adjustment will be illustrated, but before you make any adjustments, make sure that you measure the injection frequency with an accurate frequency counter. Also, if the people on the receiving end are using a wide bandwidth, this manifestation will show up. In this case, the problem will not be on your end. I generally use a 6KHz bandwidth on my homebrew equipment, and I will notice this phenomenum on strong signals.

The IC756 PRO is due out very shortly. they have updated the DSP and have added a playback record facility. I believe that there will be no upgrade for existing users. The insides and mother board of the new pro are totally different. Icom are really good at burning their existing customers like this. They did the same with the 706. Once you spent your money you get burnt since they bring out new versions without considering those who have already bought. They make the software companies look like angels, but at least you can upgrade software.Its a pity they use their customers as paying guinea pigs. It think for what we paying for radios today, we need better specs and certainly better service

It will never work. Normally the repeater input is 600 Khz.
lower. Don't understand why you want to receive at the 146.715
frequency. If you mean to receive at the 146.115 frequency and
output at 146.715, then you may stand a chance. You will need to
notch out the other transmitter frequency of 146.76, just to be
able to even hear anything weak.

Jim

Yep more equipment for the 10 metre pirates. This same company is selling this gear all over Asia. It has wiped out the 10 and 12 metre bands in Asia, Pacific, VK and ZL.

The competitor to this company is bringing out a version that goes all the way to 20 metres. In VK , ZL and the Pacific, during the night the 20 metre band is full of pirates singing and carrying on like on CB. There is nothing that can be done because there is no law and simply put there governments dont care.

HAMS SHOULD NOT SUPPORT THESE COMPANIES. ALL THEY PROMOTING IS TOTAL ANARCHY ON THE HAM BANDS.

Yes we know there are many CBers using Icoms and Yaesus etc, but these radios are priced to sell. Thats why there is Taxi companies from the Philiphines on the low end of 10 metres.

Willy

No. Its not worth the extra money. Unless your going to operate satelitte stuff. Then get the yaesu 847. If not, get the ic-746. Its the best buy for the money.

Tom

45. Re: I'm going to buy a 756PRO -- Does this look right?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-01 17:24:47 UTC
From: "George, W5YR" <w5yr@att.net>
Message-ID: <3B3F5CD2.B9194533@att.net>
Source record: 57799

In all fairness, when you consider how transceivers like the PRO are being manufactured today, it is rather unrealistic to expect them to be "upgradable" by making a few component changes.

Almost all the capabilities of the PRO and similar radios resides in the special chips, etc. and in the multitude of hard-programmed multiprocessors with which they are implemented. The labor costs alone of replacing these circuits, etc. - even if technically feasible to do so - would make such a move highly unattractive to most users. And forget about Joe Ham doing *anything* under the hood of a radio like the PRO . . .

I have not recently seen *any* manufacturer of any modern product designing successor models such that previous models could be upgraded. Autos, TVs, audio equipment, computers (to a small extent still, but that is going away as more and more of the system is hard-wired on the motherboard), etc.

More to the point, I am unaware of ANY manufactured radio - have to leave out the kits, now - that provides for upgrades. Some of the software-based models make provision for firmware upgrades and control program upgrades. The Kachina, before its demise, allowed for upgrades on a PCB/module replacement basis but that was terribly expensive and even then frequently required that the unit be returned to the factory for the work. Evidently, that business model was inadequate as witness the current status of the Kachina 505DSP and the Kachina amateur radio business.

Kit radios, such as the Electraft units, are amenable to limited upgrading but they form a tiny, tiny segment of the market.

Modern merchandising relies upon planned (and a lot of unplanned) obsolescence. I don't think it is fair to single out Icom for being a part of a much larger scheme.

I have absolutely no complaint with the performance and capabilities of my PRO. Should I find that I need/want those of the PRO II, then I will trade for - not "upgrade" - a PRO II and let someone else continue to enjoy the PRO. On the other hand, I usually never sell or trade a radio - maybe that is why the closet and shack shelves are so full! <:}

In short, having owned Icom radios since long, long ago I have never felt burned by Icom with the appearance of a newer radio with newer features and capabilities. To the contrary, I have always enjoyed the new sets and been thankful that our small amateur radio market can still induce companies like Icom, Kenwood, Yaesu, Ten Tec, etc. to make investments in research and development that lead to these wonderful new boxes that keep coming out.

72/73, George W5YR - the Yellow Rose of Texas QRP-L 1373 NETXQRP 6

In defense of Ranger's RCI line of radio Name me a better radio for SSB on 10 or 12 Meters? It will talk Circles around a Kenwood or Yaseu on SSB and on AM. FM I dunno about.
THe DX models with Surface Mount Technology are a solid performer not just good for CB !

You may have to put a notch filter on 146.760 on the front end of your receiver. If you can put vertical distance between the antennas that will

help. Remember, two mtr repeaters are only 600Khz xmit/rec freqs and the filters required are intense.

Good luck, John w1hzh

ps: no ur not nuts but I would move the frequency a bit... :+)

Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I have just acquired these transceivers, which are less than two years
old, and they have never been serviced or modified.
What puzzles me is that both these units "S" readings seem very
optimistic, compared to my 2 HTX-202's and Yaesu FT-2600M.
For example, using the same antenna and cable, repeaters that register
S3 to S5 on the 202 and Yaesu will show S7 to S9+ on the ADI's....

Any ideas of why this is, or how to bring the ADI "S meter" calibration
in line with my other radios.

:
: Todd,

Sorry to hear of your RF troubles. Typically, Cable TV equipment
will provide more than adequate isolation between on-air and off-air
signals as to make this a non-issue. However, leakage in cable
equipment does happen more often than cable companies like to
admit, and there are uncommon circumstances that do crop up
from time to time.

Cable TV channels actually operate on the same frequencies that
many commercial, amateur and broadcast stations operate on, so
it is imperative that cable TV and on-air signals be isolated by the
Cable system, and all splitters and cables and equipment in the
home. High-pass filters on the TV set or Low-pass filters on the
ham station will have no effect because, isolation between on-air
signals and cable signals should be far greater than either of the
filters could provide. Fundamental Overload that some have

referred to would be impossible for the same reason.

More common, is leakage from customer owned splitters, cabling, connectors, VCR or other equipment in the cable path, or cable jumpers. If you can feed the Cable company supplied cable directly to one TV and the problem goes away, you know you will need to concentrate on your installation in the house. The use of Double or Quad-shield RG-6 cabling (including jumpers) hi-isolation splitters and carefully installed connectors should be used in any in-house distribution.

If you still have problems with a direct connection to the Cable Co.'s drop, then you need to concentrate on direct chassis pickup by the TV set itself or on Cable company faults. If the TV (or VCR or DVD, etc.) is at fault, it may be incurable. However, RF may ride down the outside of the cable or through the AC line to the TV where the chassis will be exposed to an abnormally high level of the ham signal, and may directly interfere with signal processing in the set. Most TVs are well prepared for interference through the AC line, but other accessories like VCRs, may not be. Others have referred to "shield-breakers" as a fix for this, but they can actually worsen cable leakage. A far better solution is to wrap several turns of the cable or AC line through large torroidal ferrite cores in line to the equipment stack and/or plug strip.

Another possibility; If the signals are AM such as from a CB or some die-hard boatanchor fan, the signals may be picked up and easily heard by active audio devices through speaker wires or audio cables. I note this as an aside, because AM is not in common usage by hams anymore. Torroids and shielding will usually stop this kind of interference.

Some Cable Co. faults are from corrosion or faulty equipment in cable vaults or aerial distribution boxes. These are the Cable companies' responsibility, but they don't usually have a comprehensive plan for detecting these malfunctions without customer complaints. In cases of cable leakage, signal from the cable will often escape and cause interference to other radio services too, so that is how someone could trace the location of the fault and determine whether or not it is on homeowner property or Cable Co. property.

Jim, ac6tk

Take off the cover, on the top of the pc board there are several pots in the middle near the front edge of the board. One is the S meter level set. The others are for deviation and power level settings. Sorry, I forgot which one is the S meter set pot, but a little "trial and error" (by first marking, then moving the pots) should reveal the correct pot.

FYI, the S meter was way too liberal on my 247 - it made it worthless for use in aiming a yagi. I backed it off about 1/2 turn, now it's fine. It's not accurate, but it's now very useful in aiming my 15 element yagi.

Macnet is the WW group of Ham Radio Operators that use Mac computers
to extend their communications capabilities.

We stay in touch with each other via Radio, Internet, Telephone, and
actual visits.

o Amateur Radio CALL SIGN
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o EMAIL ADDRESS

To join Macnet, send YOUR STATS to mailto:wd1v@mediaone.net and access

* Macnet Member Listing - as the name implies, its "The List" of all of
the hams in the world that are using Macs with their radios. In ZIP CODE
order so you can see your neighbors and get together easily.
ftp://ftp.qsl.net/pub/wd1v/Macnet2001.html

* Macnet Ham Radio Software Listing - "The List" of the latest - much of
it with FTP links so what you see is what you can get with just a click.
http://www.qsl.net/wd1v/Page7.html

* Macnet Software Collections
ftp://ftp.qsl.net/pub/wd1v/
http://www.qrz.com/download/mac/index.html

* For latest Mac versions of the already cool...

From: drgrant@ziplink.net
Message-ID: <3b408aba.48350954@news.tiac.net>
Source record: 57654

The 8100 didn't have a potato mic, that was the FT-8500, which IMHO
was the best dual bander yaesu ever made, aside from the 5100/5200
series. After that the 8000/8100 and 7100 (intermod sponge/tampon)
are all pieces of crap, with the 8000 being the most reliable of the
three, but that's not saying a whole hell of a lot.

From: WG <nojunk@mail.com>
Message-ID: <J9M%6.6229$E93.628468@news1.telusplanet.net>
Source record: 57817

Thanks for the help Brenda Ann.

That was about the only site that I could find anything also except for some of the for sale sites. The price looks to be a good price for that radio. If I can't program the off sets and the memory channels the radio is no good to me. I do have one or two other options. One is to contact Icom direct and have them send me a manual. The other is to contact a friend of mine that is the senior communications technician for a large vhf radio company and see if he has an old owners manual that he can photo-copy for me. Thanks anyway

If you go to www.njstar.com and download their demo software
(which never seems to expire) it will translate the page into Japanese
characters. This will give you a slightly better sense of whats on the
page, especially in regard to specifications.

70. HTX-202 deviation

I agree with Tom. I just sold a IC-746 and Ft-847 and now have TS-2000.
If u do not need sat's or 70cm or possible 23cm get the IC-746. It is a
great rig. Only reason I sold mine is because I needed 70cm.
My FT-847 had 70cm but just did not like the radio. I love my TS-2000
though.

Looks way overpriced. It's $459 for 25 watts pep ssb, 10 watts am-fm-cw, and
covers 10 and 12 meters only. What do you do when those bands are dead?

A Kenwood TS50S, with 100 watts and all hf bands, 160 thru 10, is only $699 at
AES.

Yo power house!

Dude! theres a real good handle ya sure...

I can read just fine, and what I read was
a spam ad for a CB radio posted to the
rec.radio.amatuer groups.

Keep your CB crap to the CB groups and
all will be OK.

BTW, I went to the ranger website for
my info, and all I saw was a bunch
of overpriced CB crap designed for
fools...

CUL..

BTW... PLONK!

Charlie,

It is all CB crap, posted to an amateur group.

If you think that we are fooled by this thinly disguised
SPAM, you need to go back to school.

Pllease keep the CB radio SPAM on the
CB radio group.

Is that really all that hard to understand?

RCI has one hell of a way to go to be considered
a real contender in the amatuer radio world.
I went to their website, all I see is poorly disguised
and overpriced CB radios.

Methinks you doth protest too much!?

A notch filter will not work this close. You will also suck out
your own receive frequency. Notch filters are not sharp enough.
You may try a crystal filter, but it too may not work. You may
have too much power coming in and blow the crystal filter.

Jim

I apologize if this posting is objectionable or inapropriate to this group,
I did attempt to verify that at least similar posts were present first. I
know some people object to posting of "auction" notices, if they are
prohibited by charter for this group, please drop me a line.

Anyway, that being said....

Nope, you're ok, Aaron. For future reference though, we generally try to put FA in front of auction posts and FS in front of for sale posts. This allows people to pass if they want. Example: "FA:Eico Integrated Amp..."
Everyhing else is fine. Good idea to post a direct link like you did.
Regards

What I want to know is why that club needs a repeater with so much power? Nothing like being able to hear a repeater a 100+ miles away and not being able to get into it.

With less power a crystal filter might work, but 100 watts...

I'm looking for recommendations on RFI resistant GFCI outlets. If you've had positive or negative experiences with RFI (both the generation of, and sensitivity to) and GFCI outlets, I'd like to hear about your experience.

Thanks, Michael N9BDF, mlinden@enteract.com

We are all spoiled now. We have all these mass produced radios to chose from
and few people appreciate the technology or take part in it. I am afraid it
is true that a lot of people nowadays are just "appliance operators"

With many of the moble rigs running around 50 watts now, a 100 watt repeater is not much overkill. With some noise near the moble receiver the effective sensitivity can be less than the repeater receiver. There are some repeaters that don;t cater to the HT hams and their 5 watts or less.

I have a rohn 25 tower. 3 full sections 1- 5' section.
the Glen Martin Hazer H-2 with the roller bearing wheel kit installed.
1- 7 element 5 band beam 20-10 meter beam 40' long built by KMA Antennas

in New London N.C.
1- 40 meter rotatable HI-Gain Antenna
1-AR-10 Ringo 10 meter vertical.
1- Hy-Gain IV rotor and control box.
Everything in still in the air but with the hazer on the tower no
problem to take antennas down.
Reason for selling relocating.
Buyer must pick-up local Greensboro north carolina and take down I will
help with the take down and loading on your truck or trailer.

Thanks!

I'll accept that as a compliment. I do belong in the
amateur radio world. Judging from the stuff you
post about imagined "rights" to use the spectrum
as "you" see fit, I'll guess that you are at home
in the CB rathole.

Have fun there!

Gary

Source record: 57859

I don't have GFI outlets, but have GFI breakers on those circuits normally requiring the outlets. One of them routinely pops when I run 800 watts out on 15 meters. The antenna is fairly low and RFI on devices plugged into AC indicates plenty of RF getting into the lines. One of the lines runs underground, and that breaker has never popped from RF.

Real amateur radio!

Yeah -- go to RCI's site and check out their new 6-meter mobile rig!
They say it's excellent to take to those "field trip contests" -- hey
RCI, if you're building ham gear, get the No. 1 contest of the year
correct, MORONS!!!!

On top of that, did you notice the nice PA feature on that new 6-meter
rig? Oh boy, I gotta get one!!!

CB crap.

Miles,
I have my TS450SAT for sale, with the automatic internal antenna tuner. It is in excellent condition both cosmetically and
functionally. Has all original accessories,
hand mike, power cable. manual and original box. $600. + $20. UPS, double boxed and insured. Tnx / Barry-N1QWA.

PS -The TS450 is a more current and advanced radio than the TS850, much more internal menu features.

For a transceiver that is so new on the market i would not expect such a minor upgrade to occur so quickly. What this tells me that the radio was never ready for the market. The test results certainly confirm this. In real terms of specifications the PRO is no better that a old TS520. But i am glad you are happy and getting good results.

Poor 3rd order IMD, poor phase noise and poor receiver 3rd order intercept points, how can this be better. You better read the specs again

Well tell us what the 2nd and 3rd order intercept points are plus the
blocking dynamic range. Please also let us know the transmitter phase noise
and 3rd order IMD numbers.

What you saying is just heresay CB crap.

Is there a modification to change the scan mode on a IC 706? I have
it set to resume, but it stays on the channel for only ten seconds.
My understanding is that if I turn off the resume mode, the scan will
cancel when it comes to a busy channel and will not resume. Am I
reading the manual correctly?

All of your diatribe aside, the RCI is useless on SSB for 10 meters. It still has the "roger beep". Does it have the innate capability to run an external changeover relay or connection on the rear apron to control an amplifier?

Nobody is trying to tell you how to control the frequencies. There is legislation/law in place though.

I can only assume that you approve of the bandit use on the lower end of 10 meters.

My original call was KA4PBD - it is now N0DGN. No vanity call issue at all - I happened to be in 0 land and checked the wrong block on the 610.

Anyway you stack it - the RCI-2985DX is not a ham rig. YOU know it - we know it. Get a grip!

Hmm, and still another closed mind. Your loss, not ours. I'd rather pay $300 bucks for an all mode rig than $400 dollars for one that will only do FM.

I never was much of a "field day" participant, mostly noise and confusion released on the bands (kinda like channel 19 cb). I have made a lot of field trips with radios though.

Maybe I just misunderstood the posting. Or possibly the word "for" was accidentally deleted between "correct" and "morons" ?

Pretty nutty! Actually FCC rules were written by hams with
years of experience in order to allow the maximum flexibility
of operation without jamming fireman, ambulances and
aircraft in flight. The rules being a guidebook of how to do
just that. Even the self-policing policy reinforced that.
I know that has been changing lately as corporate lawyers
take over more and more

I see this mentality borne of the CB experience of anarchy
and I wonder what do they want with Ham radio anyway?
It just seems they want Ham tickets so they can get even
for some imagined oppression. It's like bringing a bat to
a golf game and throwing a tantrum because they can't
get on base... Actually, it is people like that who infiltrate
our government and threaten all our freedoms by getting
citizens to throw away their rights in the hope that the
government can do something about it.

They probably pee in their own food to mark it.

Rights/responsibility vs. parent/child

Act like a child, get treated like a child. Turn 18 and look out!

C'mon VE's, quit being easier than a teenage hooker and
show a little more fortitude and discretion.

But you can get a whole bunch of used 5 band radios for $200 or less.
I see used HW-101s for $100 with the manual, and it's a great
learning experience. You can have a lot of fun while you save your
money for antennas and upgrades. My primary radio is a TS-830s
because it's a man's radio with great features, performance and a
solid feel. Some of the newer stuff is just so chintzy.

That ranger thing is just a busy box for the playpen. It's bigger
than a IC 706 though.

Sadly, these GB's - "good buddies" - haven't the slightest clue what those specifications mean and how they relate to the performance of the rig. If they did, RCI would be out of business tomorrow. Trying to have a rational discussion of these technical specifications with a GB is like trying to explain nuclear fusion to a migrant farm worker. A classic exercise in futility...

Yes you are reading the manual correctly, I thought it was a bit strange
when I got mine as my ic2100h can be programmed with different pause lengths
but it appears the 706 can not.

The GB's (good buddies) can't comprehend - and don't care - about those
things. As long as the rig has 200% modulation, transmits a 50 kc wide
signal, and can drive their "leeneer's" they are happy. Throw in a few
extra knobs and buttons and a big meter with lots of "swing" and they are
in chicken band heaven...

Bull. A Ranger can't even touch the audio nor the power performance,
nor the reciever of a Kenwood.

End of story.

Yeah, but Ebay has a much better selection of ham radio stuff than Yahoo does
and the ham radio section of Yahoo is 90% CB's and FRS crap.. they need to make
a seperate section for those... Of course if you're looking for a good illegal
CB amp, Yahoo's the one to check...

Zack-

I have a Kenwood TM-742A in my car (2000 Passat). Use it on 2m
& 70cm frequently with no adverse effects on the car. Have a dual
band antenna on the trunk. Also have a 6m module (and another tri-band
antenna). When on 6m, I get RFI into the speakers, but I know that's
because the antenna isn't grounded. Not about to scratch off paint
just for that.

I'm getting power from the fusebox on the left side. Found an empty
fuse socket with power, so I figured I'd try that. Works fine. Going
all the way to the battery is better, but I couldn't find any holes
to the front where I could put the cables thru, and do not want to
drill the car.

Got some QRM on 146.52... think it's from the car (running or not). The
noise is there whereever I go and doesn't change. Don't remember the
noise on the freq when it was in my other car or in the house.

Many hams don't have a clue what they mean either. Also look at the antenna gain numbers for either CB or Ham antennas and they both seem to be just made up for the most part. YOu can not go by what the makers tell you, but have to check them out. Don't depend on the magazines either. One magazine gave a good review to a mobile rig and said yo could see the display in any lighting condition. I could hardly read mine and a fellow ham could not hardley read his display either. If they mislead you on the simple things like that, just think how they may mislead you on other things.
Afterall , how many bad reviews did you ever see ?

Hello,
I just obtained one of these older mobile units a couple weeks ago. The only information I could find on this radio is how to modify it. Even the Alinco web site barely acknowledges that they ever made it. My first question is a request for information about the -22t, any problems, strong points, repair issues, etc...

Also, I went ahead and modified this unit so I could listen on police and emergency frequencys. Since then, I have experienced a problem that may or may not be related. It doesn't appear to be transmitting the PL tones properly. (I can't activate a local repeater anymore, but if I dial the override, I can hit it fine). I only had the radio a couple days at that point, so I can't confirm that I lost the tones as soon as I modified it or not, and I only noticed the loss this weekend. (I thought I was out of range) Does this sound like a problem that could result from the mod, perhaps over-zealous (messy?) soldering, or overheating of the chip? If not, does anyone have any suggestions on testing and/or repairing whatever might cause this?

Thanks for any information you can provide.
Brian

I wouldnt support this line of rigs for the one reason is that they are mostly used by CBers. They sell them everywhere and thats why 10 and 12 meters are full of idiots. They have a new 6 meter rig coming. But screw then TEN TEC has a 6/2 rig that i would buy anyday before that cb based crap.

I have owned all of them i rate them like this

847 worst esp on HF Weak signal is good
746 and 2000 tie for weak signal
2000 a little better on HF with its built in selectable filtering.

The TS 2000 will have a firmware upgrade by the end of the year FYI.

At 45KHz between your RX and their TX, you are not going to be able to filter enough to have any real useful sensitivity from your RX. Filter technology is not that good, and even if it were, it would exceed reasonable cost.
Personally, I would find another site.

156. FT-847 vs. IC-746

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-03 04:55:38 UTC
From: Zach Sadecki <zsadecki@hotmail.com>
Message-ID: <efc07.9857$WT.1753274@typhoon.austin.rr.com>
Source record: 57759

Which is better? Pro and Cons? I'd like to hear opinions from people who've owned both.. I'm considering buying one to replace my aging TS-680. Here's how I estimate I'll be using it: 6M SSB 75% time, 2M SSB 10%, 2M FM 10%, HF 5%. If I get the 847, factor in 430 SSB/FM into 2M time... And I might dabble in Sats a little, too...

So I won't be too concerned with HF problems, but I do have a few locals that could be a concern for 6M, 2M weak signal...

Thanks,
Zach

05.01.2001 First created.

Welcome to the IC-746 FAQ.

Q: What is an FAQ?
Q: Where can I get a copy?
Q: Where do I send feedback?

Short Answer

FAQ stands for "Frequently Asked Questions". It tries
to cover common questions/problems/issues associated
with Icom's IC-746 HF/VHF amateur radio transceiver.

The master copy is kept at:

http://groups.yahoo.com/group/IC746/files/IC746-faq.txt

Mirrored copies (after a short delay) appear at:

http://www.skysdaughter.com/icom746-faq
http://206.230.2.41/IC746-faq.txt

Monthly announcements of revisions are posted to:

rec.radio.amateur.equipment

Additionally, you can post questions/comments
about the FAQ to the above newsgroup.

Long Answer

The format of this FAQ should become apparent right
from the start. Questions start with a "Q:" and
will sometimes be grouped together when they are
inter-related.

When possible/practical, there will be both a short
and long answer. The short answers will try to be
brief and to the point, typically about one paragraph.
While correct, quick, and immediate, it will often gloss
over subtleties and details. The long answers will cover
theory, alternatives, dissenting opinions, and other
supplemental material. We try not to unnecessarily
duplicate information between the answers (this one
is an example of that). Long answers may go on for
several pages.

The questions that are addressed here (as well as the
answers) come from several sources.

This FAQ was created by and is hosted by folks on a
Yahoo e-mail discussion group at:

http://groups.yahoo.com/group/IC746

Another (bbs style) on-line discussion group can be
found at:

http://vartel.com/icom746/icom746index.html

There are also the following newsgroups:

rec.radio.amateur.equipment
rec.radio.swap

Specific comments or clarifications can be sent directly
to the FAQ coordinator. "Content submissions" would be
greatly appreciated. However, general discussion/debate
over the answers is best done in a more public forum,
like one of those mentioned above.

Q: Should I buy an IC-746?
Q: What are the IC-746's features?
Q: How does the IC-746 stand up to the ______ ?

Short Answer

Yes. Try it, you'll like it.

Long Answer

This FAQ is maintained by happy, loyal, and devoted
IC-746 owners. What do you really think we're going
to say?

For features, check out the IC-746 specifications
from brochures available at your local amateur radio
equipment store, on-line documents at various vendor
sites, or directly from Icom's WWW site at:

http://www.icomamerica.com/

Most of the 746's problems or faults show up either in
this FAQ (eventually) or in the archives at:

http://groups.yahoo.com/group/IC746

Probably the most objective, quantitative comparisons you
will find are the QST product reviews (freely available
to ARRL members):

http://www.arrl.org/members-only/prodrev/

Simpler, more limited, comparison charts are available
on the Amateur Electronic Supply WWW site at:

http://www.aesham.com/compare/comp_hf.html

User written reviews can be both more personal and
more detailed. They can also be more biased. You can
find plenty of them at:

http://www.eham.net/reviews

Q: How much is a used IC-746 worth?

Unlike used cars, there is no official "blue book"
for ham equipment. Only YOU can decide this.

Your best bet is to peruse the archives for

rec.radio.swap

over the past 6 months or so.

You might also check out one of the following sites

Electronic Boneyard Prices:
http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm

E-Bay prices:
http://aade.com/hampedia/prices.htm

Virtual Hamfest - Recent Prices:
http://www.vhamfest.com/prices.html

Good luck.

Q: Is there a dedicated HF net for the IC-746?

Not yet. It's been proposed several times, but nothing
has ever congealed.

There two HF nets devoted to Icom rigs in general.
They meet Sundays, on or about 14.317 Mhz, at 1700Z
and 2200Z.

Q: Is there an electronic copy of the IC-746 operators manual?
Q: Is there an electronic copy of the IC-746 service manual?

No such copies currently exist, although they would
quickly become popular if they did. As of May 2001,
Icom had no plans for creating either. Additionally,
Icom considers any such external productions to be a
violation of their copyright. Ray (the product manager
at the 2001 Hamvention) was very firm on this.

Hard copies of both are available through any Icom
retailer as well as through the W7FG Vintage Manual
WWW site at:

http://www.w7fg.com/

Q: What's that funny rattling noise I hear when I first power on the
rig?

Often, its the antenna tuning unit. The relays make
audible clicking/rattling sounds.

Q: Why doesn't the ALC meter work while adjusting the "mic gain"?

Despite what the manual says, the ALC meter only works
for SSB; not FM, CW, or RTTY. Nobody knows what (if
anything) the ALC reading means on the other modes.

Q: Why can't I program any numbers into the memory names,
the CW memory keyer, etc...?

Use the keypad to enter numbers. The dial only does
letters and punctuation.

Q: What power supply should I use with the IC-746?

Short Answer

Any good quality, communications grade, power supply
rated at least 20 amps or more (continuous duty) should
do just fine. However, most of us use larger supplies
(for a variety of reasons).

Popular supplies that are known to work (via testimonial):

Astron RS-35M 25/35A linear
Astron SS-30 25/30A switching
Astron SS-25 20/25A switching
MFJ 4125 22/25A switching (MightyLite)
MFJ 4225 22/25A switching
Samlex SEC-1223 23/25A switching
Kenwood PS-52 20/22A linear

Popular supplies to avoid (via testimonial):

Astron RS-20 - overloads too easily
Diamnond GZV-4000 - RF hash on 40/20m

Long Answer

This question typically arises for one of two reasons.
Either someone wants to buy a new power supply, or they
have an existing power supply that they want to use.
In both cases, the issues are: load capacity, size,
weight, electrical noise, mechanical noise, cost,
features, and appearance. Buying a new supply gives
you a lot of options; there are plenty of great supplies
out there. With an existing supply, you have no control
over these factors; you're simply looking for a "fit".

You'll want to consider the following factors.

Reviews

QST tested and reviewed many supplies in January and September, 2000. You'll find the results informative. ARRL members can access those and other reviews on-line at:

http://www.arrl.org/members-only/prodrev/pdf/pr0001.pdf

http://www.arrl.org/members-only/prodrev/pdf/pr0009.pdf

Transportability

The larger the capacity, the larger and heavier the supply. If size and weight are critical for you, consider a "switching" supply as they are usually less than half the size of a "linear" supply.

Electrical Noise

All supplies generate some electrical noise. Typically the noise from linear supplies will be in the form of AC hum while from switching supplies the noise will be RF hash. Communications grade power supplies of either type are designed to minimize the noise, and generally cause no problem. (i.e. this is not a good place to cut corners)

"Computer" power supplies that are pressed into radio service are particularly bad when it comes to electrical noise.

Usually, the harder you push a supply (the heavier the load), the worse the noise will become.

Mechanical Noise

Many supplies have cooling fans. Sometimes, the fans are loud enough to be a noise problem themselves. Fan noise is variable from supply to supply (even within the same manufacturer and model). Likewise, hearing tolerance varies from operator to operator. Thus, it's hard to tell in advance if a specific supply will have a problem. Time may yet tell.

We do know that fans are driven by load. The closer you operate to a supply's capacity, the more the fan runs.

Also, some of the transformers used in linear supplies will generate an audible hum. The transformer itself vibrates with the AC supply. Mass seems to help here. Usually (not always) the heavier the transformer, the less the hum.

Its pretty easy to put a noisy power supply under a table, behind a cabinet, or elsewhere to cut down on the noise level. Just be careful to allow proper air

flow for cooling.

Features

Most of us consider current limiting, over voltage protection, and high temperature shutdown to be mandatory in a new supply.

Fuses or breakers are required for UL certification. Buy spare fuses right away; they never blow at a convenient time.

Meters are non-essential, they are luxury items. They make the supply bigger and more expensive. However, they can be very handy and even fun. Lets face it, most hams enjoy gadgets.

Adjustable output voltage is a useful feature, more useful than you might realize. Most new supplies have it (usually internally).

Load Capacity

The size, weight, and cost of a power supply all tend to increase with its load capacity. Those factors encourage us to get the smallest supply we can. There are also factors that encourage larger supplies; such as noise, heat, accessories, etc...

The IC-746 specifications list a current drain at maximum transmit power of 20A at 13.8Vdc. Thus, the recommendation that your supply should handle 20 amps (or more) continuously.

It is possible to run the IC-746 with a smaller supply, but extreme caution and discipline are required. Very few, if any, of us recommend it for normal operation.

For example, the 20 amp maximum in the IC-746 specifications is full key-down at full power. You could just lower your RF power to help match your load to the supply. You could even run the IC-746 QRP, drawing as little as 3-4 amps on transmit.

Another factor is operating mode. Some of us have measured full-key loads as high as 21-22 amps. Normal SSB transmit at full power draws 6-15 amps. But FM, digital, and CW will generally pull 18-20 amps at full power.

Continuous vs. Intermittent Load

There are issues concerning a supply's "intermittent", "peak", or "surge" capacity. A supply might be rated

for 16 amps continuous and 20 amps peak. Normally, the IC-746 runs at about 2-3 amps for receive and only hits the 20 amp maximum during transmission. Thinking of transmitting as "peak" or "intermittent" activity can lead one to think that such a supply is acceptable. It might even be. However, a problem develops when we try to define what peak or intermittent activity is.

Everyone would agree that transmitting for 3 minutes at 20 amps till the repeater time-out cuts you off is not a peak. How short a time constitutes a peak and at what duty cycle? Without some sort of specification or standard, "peak" and "intermittent" could mean just about anything. Most of us feel more comfortable with a "better safe than sorry" approach.

This dual rating system for power supplies is a great source of confusion. Specifically, you could buy a power supply rated for 20A and have it fail under full load. The Astron RS-20 and Pyramid PS-21 are examples of such supplies. While both are excellent supplies, they just can't keep up with an IC-746 under full power.

The exact definition of intermittent, peak, or surge as used by the power supply manufacturers has not been established.

(Some of us are going to try to talk to the supply manufacturers about this to get more details)

To quote a tech from Samlex:

Maximum rating is surge current requirement for starting reactive loads or short term dynamic loading and is limited to a few seconds.

This supply is not designed for pulsing loads.

Currents beyond the maximum rating will force the unit into current limit and the output voltage will drop and it will no longer be regulated.

Meanwhile, MFJ said (of the MFJ-4322):

Our units will shut down at surge. At 25 amps surge, the power supply will shut down at about ten seconds.

So while it is theoretically possible, most people do not use supplies rated less than 20 amps continuous. In fact, most use substantially bigger supplies.

Bigger Supplies

Why use a bigger supply? There are several reasons.

As noted earlier, the closer you operate a supply to
its rated capacity, the greater the electrical noise,
mechanical noise, heat, etc...

Strain leads to wear-and-tear. So it can be argued
that a bigger supply should last longer.

The IC-746 is rated at 20 amps max, but loads as high as
21-22 amps have been measured. "Your mileage may vary"
definitely applies.

The continuous rating is generally based upon an
ambient air temperature of 20 C. The rating degrades
as the temperature rises, by how much, we're not sure.
Filed Day conditions will be stressful to your supply.

13.8 V times 20 A yields 276 watts. There's a tendency
for some supplies to drop voltage a little when they
get hot or overloaded. There's also a tendency for
some radios to increase their current pull when the
voltage drops. At 12 Vdc, that same 276 watts would
imply 23 amps. You push the supply capacity, which
drops voltage a little, which drives the rig current
up, which pushes the supply further ... then BANG.
You blow a fuse. (AK6R has actually seen this effect
with his 756pro)

There are plenty of other devices that need DC power.
You need to account for them as well.

Other and future rigs may have greater power demands
(like the 756pro). Extra capacity now may avoid the
need to upgrade your supply in the future.

You might well spend most of your time in a low power
situation (SSB QRP) and get by with less than 5A.
But, in an emergency, you and your gear may be called
upon to operate in different modes, at higher power,
and with heavier duty cycles. Planning ahead for the
worst case usage helps prevent an untimely failure at
just the wrong time.

Conclusion

So, you'll find most of us with power supplies ranging
from 20 to 30 amps continuous; and some with even
bigger supplies.

Q: What antenna should I use with the IC-746?

Short Answer

Any antenna you want.

Long Answer

Seriously. ANY antenna will work with the IC-746,
with the proper interfacing. People have even made
contacts using dummy loads.

Antennas are probably the most uniquely individualistic
aspect of any ham station. Antenna selection is a BIG
topic; much too big to deal with in an FAQ (at least
for this one).

The IC-746 has 50 ohm, unbalanced, coaxial RF outputs.
With the automatic ATU capable of handling SWR
mismatches of up to 3:1, you have a wide variety of
choices available to you.

There are many excellent books on the topic; the ARRL
has a couple dozen of them. A good one to start with is:

The ARRL Antenna Book

At over 800 pages (and over 1,000 antennas), you're
sure to find SOMETHING that fits your style and budget.

For more information, try hanging out on one of over
50 e-mail groups on the topic at

http://groups.yahoo.com

or visit one of the hundreds of antenna oriented WWW
sites indexed by AC6V:

http://www.ac6v.com/
http://www.ac6v.com/antprojects.htm

or follow along with the discussions on the newsgroup:

rec.radio.amateur.antenna

or visit the on-line antenna magazine:

http://www.antennex.com/

or, you could just put up a trusty old dipole.

Just be sure you do use an antenna. The IC-746 does not
like to transmit into an open load (no connected antenna).
It will put an undue (and possibly fatal) strain on your
output transistors.

Q: What range can the automatic antenna tuning unit (ATU) handle?

Offiially, the automatic ATU in the IC-746 can handle SWR mismatches of up to 3:1. In practice, many people get even wider ranges.

Q: Are there any "tips" to using the ATU?

Yes. The ATU appears to pay attention to the reflected power, not the SWR. [Note: we'd love someone to analyse the schematics to confirm or deny this.] This is evidenced by two effects.

When starting from a close match at QRP power levels, the auto ATU doesn't always home in on the best match. Increasing the power level and tuning again often improves the match, which the ATU then retains when returning to QRP power.

The converse situation can also cause trouble. When starting from a poor match at full power, the auto ATU sometimes can't find a match at all. In this case, tuning at lower power allows the ATU to get a match, which the ATU then retains when returning to high power.

Q: What "mods" are there for the IC-746?

Short Answer

Most people who ask this question are looking for ways to make the IC-746 transmit or receive additional non-amateur RF bands. Modifying the IC-746 to transmit outside of the amateur bands is generally considered to be illegal. There are a few exceptions; like perhaps MARS/CAP, transverter usage, changes/additions to ham bands, etc..., but they can become controversial.

That said, MARS/CAP/TX/RX modifications for the IC-746 (and many other radios) can be found at:

http://www.mods.dk/

Long Answer

Not all mods are about TX/RX frequencies. Here are some of the others.

W2ENY has devised a way to replace the stock 15KHz or 9MHz IF filters for AM work with 6KHz filters.

http://www.geocities.com/w2eny/icom/filter.htm

AH6LE has modified his IC-746 to provide safe sequencing for EME work.

http://www.ah6le.net/radiomods.html

OK2WY has a "Simple CAT / programming interface for ICOM RIGs". Rumor has it that he has also designed an in-board step attenuator.

http://www.qsl.net/ok2wy/projects.htm

Some folks have replaced the transistors that drive the LCD backlight in an attempt to prevent overloading and burnout. See the question devoted to LCD lamps.

Q: Where can I get replacement power connectors?

Short Answer

The connector you need is often called an "OEM-T" connector. You can order Icom part number OPC-025A or OPC-025D from any of the major ham equipment retailers for a pre-wired cable.

Long Answer

Icom's cable compatibility chart lists the OPC-025A. Most retailers sell the OPC-025D. Both apparently work. The OPC-025A is rated for 20 amps, while the OPC-025D is rated for 30 amps. Most hams prefer the beefier cables.

Rather than finding another Icom connector, many folks put inexpensive connectors on the cables of all their rigs and power sources. That way they can use any rig with any supply no matter what brand. Particularly handy for switching between mobile rigs. Even Radio Shack has these, cheap.

One very popular connector is the Anderson PowerPole.

http://www.andersonpower.com/

which is readily available from either

http://www.dcpwr.com

http://www.powerwerx.com/

In fact, the PowerWerx folks have pre-wired, PowerPole to OEM-T cables ranging from 1 to 10 feet long that are much cheaper than the Icom part (less than half the cost). You can always just snip off the PowerPole connector if you don't want it.

Many clubs and organizations have been standardizing on the PowerPole connectors for their high amperage 12VDC power. This makes all of their equipment inter-compatible and interchangeable; a real plus in

an emergency. There's a good article on that subject at:

http://www.dcpwr.com/standard.html

Q: Why isn't my output power up at 100 watts?

One possibility is your DC supply voltage. The IC-746 really wants a full 13.8 Vdc. Check the actual voltage your rig is receiving. You may need to adjust the voltage setting on your power supply.

If your rig isn't getting the voltage you think it should, then check for voltage drops along the power cord and across joints and connectors. It's possible to lose as much as a half volt per connection. Solder joints and use high quality connectors where possible.

12 AWG wiring is the minimum, but 10 AWG is better.

Q: The backlight in my LCD has stopped working. What's wrong?

Short Answer

Its probably one of the display driver transistors on the S-Logic board behind the display. It will have to be replaced.

Long Answer

Unfortunately, this has become a problem for some 746's. It's not the actual 'lamp' itself, but one of the driver transistors. The lamp is fluorescent, and will probably never wear out. Even if it did, the lamp isn't available as a separate part; it's part of an assembly you need to get from Icom.

There is a DC/AC converter driving the "lamp". Check the S-Logic board for transistors Q301, Q302, Q303, and Q304. Q302 is the most likely culprit as it is the voltage regulator for the dimmer function. If you have a DC voltage on the collector which is variable by the dimmer function on the radio, then this transistor is OK. Q303 and Q304 are the next most likely candidates. These 2 transistors are in push-pull configuration to drive the X-former (base is 180deg phase shift by the X-former)

Refer to pages 6-1, 9-1, 10-1, and 11-2 in the "Service Manual" for more details.

Several folks at:

http://groups.yahoo.com/group/IC746

have successfully performed these repairs themselves.

OZ5ACI feels that the way the Q302 transistor is mounted
is a design flaw. Icom used the cooling fin of the
transistor as a soldering point, thus when it gets
hot, the soldering melts. That slowly deteriorates
the soldering material resulting in a lost connection
and a cooked transistor. He has a feeling that future
cooked transistors can be prevented by simply unsoldering
the transistor cooling fin to lift it and lengthen the
center leg to establish connection at the cooling fins
soldering point.

AH6LE counters that if the transistor gets hot enough
to melt solder (300 degrees or so), then there are
other problems. Most solid state devices won't survive
such temperatures, thus we're seeing the result, not
the cause.

OZ5ACI used an "overkill" transistor from his junk box
and had to cut a bit of the cooling fin to make it fit
under the shield. The original transistor (2SB1201)
is not very tall and can be left at an angle so no
cutting is needed (or wanted!). He says it's all fairly
simple. The only trouble is that the front section of
the 746 has to be taken totally apart and getting it
back together with no dust behind the plastic screen is
a pain. Get yourself a small can of workshop compressed
air or CO2 if you can.

Of course if your 746 is still under warranty, you
may want to consider going that route. Either way,
contact Icom for the parts you need.

Q: Can I use a Heil microphone with the IC-746?
Q: Do I need a pre-amp to use a Heil microphone?
Q: How do I adjust the IC-746 for a Heil headset?

In theory, the IC-746 has enough microphone gain to use
an unaided Heil microphone. Heil even has a newsletter
that discusses the topic, see:

http://www.heilsound.com/newslettermay00.htm

In short, you use moderate compression along with
moderate mic gain for the best results.

However, the above procedure just doesn't seem to work
for everyone. For those that still have gain problems,
adding the Heil HMP microphone pre-amp should work
just fine.

Q: Is there some way to get the Icom-746 to generate DTMF tones?

No. The IC-746 will not generate DTMF tones.

However, you have some options for generating DTMF
tones yourself.

The good news is that Icom's compatibility table
shows that the HM-14 DTMF hand microphone will work
with the IC-746. It even comes with a handy switch to
enable/disable the UP/DN buttons. Remember, you have
to press the PTT switch to use the DTMF pad.

The bad news is that the HM-14 is a discontinued item,
so availability is limited. Also, as K9HFX discovered,
there are apparently two versions of the HM-14.
The version without the scan button enable/disable
switch did not work for him. More information is needed.

While not listed on Icom's compatibility charts as such,
VE4HAY reports that the DTMF pad on the HM-56 will also
work with the IC-746, but it's scan buttons will not.

Another option is a portable tone dialer, such as one
that you could get at any Radio Shack. Just send the
tone sequence right through the microphone. Not all
such devices give access to the 'A' - 'D' tones, but
those tones don't get used much anyway.

Some have suggested wiring a DTMF pad into a microphone
cable, much like what you would do for a TNC. However,
as yet, nobody has shared any success stories.

Q: Are there different versions of the IC-746?

Yes, there are at least two distinct versions of
the IC-746.

While most of the indications are circumstantial,
one definitive piece of evidence are the two different
procedures for modifying the transmit/receive range.

There are varying reports about the necessity of
a microphone pre-amp when using Heil microphones,
leading some to speculate upon differences in the
microphone input circuitry. K9HFX's problems with
getting the HM-14 microphone to work might be related.
There isn't enough information yet to be conclusive.

Some rigs seem to have problems with the transistors
that drive the LCD backlight, some do not. This might be
due to a circuitry change, or a difference in assembly.

The jury is still out.

The only way the issue will be resolved conclusively
is for someone to organize a data collection effort
to sort out these details by serial number. So far,
no one has volunteered.

Q: Can I hook up my straight key to the front "Elec Key" Jack?
Q: Can I connect my own Electronic Keyer to the IC-746?
Q: How do I wire up my paddles for use with the internal keyer?

Short Answer

Yes, virtually any type of key/keyer can be connected
to to the IC-746 via either the front "Elec Key" jack
or the back key jack. However, the two jacks require
different wiring, and only the front jack will give
access to the internal electronic keyer.

The front "Elec Key" jack on the radio accepts a
3-conductor 1/4 inch stereo phone plug and can be wired
for use with anything. The back "key" jack accepts a
2-conductor 1/4 inch mono phone plug and can be wired
for use with either a straight key or an external keyer,
but not for the internal keyer.

See page 68 in the operator's manual for wiring details
and pages 23 and 27 for the programming details.

Long Answer

FOR A STAIGHT KEY OR EXTERNAL KEYER:

For a diagram on how to wire the stereo plug see page 68
of the operating manual. For a straight Key or keyer,
wire only the tip and the Sleeve, and leave the ring
as No-Connect.

tip ring sleeve
oooo ====]]]]]]} ---------> 2 cond wire to key/keyer
(+) (nc) (-)

The back "key" jack is a mono 1/4 inch phone plug and
is easy to wire.

When using the front Jack, You also have to set the
radio to recognize that the ring is not used. To set
the radio, You do have to go to the "key", "set"
menu and tell it you will be using a straight key.
See Page 23 and page 27 in the operation manual.
While in CW mode press KEY(F4), then press SET(F5),
Press the down arrow(F2) until you reach the sixth menu

(KEYER TYPE), Use the Main tuning knob to set the type of keyer to "Straight Key".

TO USE THE BUILT IN ELECTRONIC KEYER WITH PADDLES:

Wire the 3cond Stereo plug (use the front jack) so that the "Dit" is the tip, the "Dash" is the ring and the sleeve is common(-). (You can also wire up a "bug" this way (without electronic keyer))

oooo ====]]]]]]} ---------> 3 cond wire to paddles
(dit) (dash) (-)

To set the radio to use the internal electronic keyer, You do have to go to the "key", "set" menu and tell it you will be using paddles. See Page 23 and page 27 in the operation manual. While in CW mode press KEY(F4), then press SET(F5), Press the down arrow(F2) until you reach the sixth menu (KEYER TYPE), Use the Main tuning knob to set the type of keyer to "Elec Key". (or "bug Key" to use the bug without electronic keyer)

Q: How do I wire the IC-746 up for computer control?
Q: What cables do I need?
Q: What are CT-17, OPC-478, OPC-662 all about?

The IC-746 is computer controllable through a serial interface, but it is not RS-232. This is both good and bad. Bad, because you can't just plug it straight into your computer (wrong voltages, etc...). Good, because you can control four separate rigs with the same serial line. Therefore, to connect the IC-746 to a computer requires some interfacing. Icom made three: the CT-17, OPC-478, and OPC-662.

The CT-17 is the full boat. Versatile, it will allow 4 rigs to be controlled by a single RS-232 serial line. It's also the most expensive option and requires external power.

If all you want to do is connect up a single rig, then Icom's WWW site lists the OPC-662 remote PC control cable as the official part. If you can find it, then great. Most people can't. Instead, many hams have successfully used the OPC-478 PC cloning cable. It's less than half the cost of the CT-17. However, it is very short (1 ft ?) and will require a 1/8 inch stereo to mono plug adapter for use with the IC-746.

When you buy the RS-746 remote control software from ICOM, it comes with a single rig cable (OPC-662 or

OPC-478?).

W2ENY sells a complete CT-17 clone and a single rig cable. They're both more complete package than Icom's, coming with cables and software resources on a CD-ROM. They're also cheaper. You can find out more at:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

There's really not that much circuitry in one of these interface cables, and many have homebrewed them for as little as $10. Supposedly, the November 2000 issue of QST has a suitable design (with feedback in the January 2001 issue). On-line circuit diagrams based on the QST article appear at:

http://www.ambersoft.com/Amateur_Radio/Icom_Interface.jpg

and

http://www.qsl.net/civ_commander/interface.jpg

KD6UU posted detailed schematics and instructions on eham.net:

http://www.eham.net/articles/1588

and then wrote an excellent updated follow-up article at:

http://www.qsl.net/kd6uu/icomci.html

The actual design of the interface circuit is subject to debate (as the above link will make clear). Several alternative designs (along with a wealth of related information) are available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

Q: What is the control protocol for the IC-746?
Q: What is CI-V?

CI-V is the control protocol used by ICOM for remote PC control of their equipment. The basics of the protocol are documented in the manual. However, most people will prefer the documentation available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

or the documentation that comes shipped with W2ENY's control cables:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

W7FG Vintage Manuals has listings in their catalog
for both the CT-17 Level Converter and for the CI-V
Communications Interface on their WWW site at:

http://www.w7fg.com/

Q: What is the CI-V address of the IC-746?

The CI-V address of the 746 is $56 (hexadecimal).

Q: What computer software is available?
Q: Where can I get computer software and upgrades?

There are several choices (compromises?) available.
On one end of the spectrum, we have programs that
replicate nearly all of the IC-746 controls on the
computer. On the other end, there are programs that
do computer assisted contact and contest logging.

There is a fairly comprehensive listing of CI-V
compatible software on DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

We'll mention some of the available software options
below. User reviews for some of the below software
can be found at:

http://www.eham.net/reviews/

and

http://www.qrz.com/search.pl?topic=reviews

** Icom RS-746 software

Icom SELLS a program called RS-746; buying it
is certainly the path of least resistance. It is
available through the usual retail channels. It comes
complete with both software and the necessary cabling
(OPC-662?). Many people describe it as a thing
of beauty. (Of course, beauty only runs skin deep.)

A description of the software can be found at:

http://www.icomamerica.com/amateur/hf/746soft.html

To quote ICOM's own support FAQ (circa May 2001):

Q: Where can I download the ICOM PC programming (or cloning) software?

A: The ICOM programming software is not freeware, and is not available for download on our Web site, or anywhere else on the Internet. It must be purchased either from an authorized Icom America dealer, or direct from ICOM. RT Systems also develops programming software for ICOM radios.

Ray (the product manager at the 2001 Hamvention) was very firm on this issue. They take a dim view of the pirated copies available on the internet.

Last word we know of (January 2001), Icom had no plans to update/fix/enhance the RS-746 software.

** RT Systems software

OK, so Icom refers us to RT Systems at:

http://www.rtsars.com/

However, as of May 2001, RT Systems does not have a 746 control program. They told N8AVX (in February 2001) that they had no plans to do so either.

** Kingsmith Software

Kingsmith Software is developing control software for the IC-746 (RATS IC-746), but as of May 2001, it wasn't available yet. More information is available at their WWW site at:

http://www.kingsmith-software.com/

** W2ENY

W2ENY ships a CD-ROM with lots of software and documentation along with the PC to rig interface cables he sells. Many of the packages listed here are also on his disk.

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

** RadioComm

Arachnophilia has several programs: RadioComm, IcomControl, and EasyTuner (among others). Check out the download section on their WWW site is at:

http://www.arachnoid.com/

** YP Log

Tony Field (VE6YP) makes a radio control and logging
program called YPLOG. His WWW site is at:

http://www.nucleus.com/~field/

** TRX Manager

Some say that TRX Manager by F6DEX has more features
than the original radios. More info can be found at:

http://www.trx-manager.com/

http://www.hosenose.com/trx-manager/

** XMLOG

The freeware logging software produced by W1ECT also
talks directly to the IC-746. You can learn more at
either the WWW site:

http://www.xmlog.com

or at the yahoo e-mail group site at:

http://groups.yahoo.com/group/xmlog

** TR Log

One of TR-Log's claims to fame is that it will run on
just about any PC. More details at:

http://www.qth.com/tr/

** CI-V Commander

A package that integrates well with the DxLab software
suite. More details at:

http://www.qsl.net/civ_commander/

** IRC

One of IRC's claim to fame is selectable skins.
You get to choose what you want your radio to look
like, be it IC-746, IC-706, or even a 007 spy watch.
More details at:

http://n9zle.tripod.com/

Q: Why don't my "band edge beeps" match the US amateur bands?

Nobody knows what (if anything) the band edge beeps
correspond to.

Q: Can I transmit all the way out to the "band edge beeps"?

Yes, you can trasmit all the way out to the beeps.
The IC-746, as shipped from the factory, can transmit
outside of the amateur radio bands. This has been
tested and confirmed on several rigs via dummy loads.

Q: Can I reprogram the "band edge beeps"?

No, there is no known way to reprogram the band edge
beeps. There are no fixes or planned updates from Icom
dealing with them.

Q: Do we know anything about the "band edge beeps"?

The band edge beeps generate a lot of discussion and
speculation. As of June, 2001, the band edge beeps on
all tested rigs correspond to:

1.8 - 2.0 MHz
3.4 - 4.1 MHz
6.9 - 7.5 MHz
9.9 - 10.5 MHz
13.9 - 14.5 MHz
17.9 - 18.5 MHz
20.9 - 21.5 MHz
24.4 - 25.1 MHz
28.0 - 30.0 MHz

If you know of an UNMODIFIED rig which differs from this,
then please let us know.

While nobody has figured out what the band edge beeps
correspond to, we have been able to rule out several
possibilities.

They do not correspond to the amateur radio frequenicies
in Japan. For that matter, they do not correspond to
the ham allocations in any of the IARU regions.

They are not a combination of all available amateur
radio from around the world (a mimimal superset).
They are much wider than that.

As wide as the band edge beeps are, they do not encompass
all of the MARS/CAP frequencies. To do that still
requires a "mod".

Any other ideas or info?

Q: Where can I find plugs for the ACC connectors?

They are 7-pin DIN connectors (the old style AT keyboards
used 5-pin Din). A couple (of many) possible sources
are:

Digi-Key http://www.digikey.com/

BUX CommCo http://www.buxcommco.com/

Your local electronics store either have them or can get
suitable substitutes. For example, most Radio Shacks
have the 8-pin DINs in stock (#274-026). They are
compatible after you remove the center pin.

Q: How many optional IF filters can I install into the IC-746?

There are two (2) slots for optional filters in the 9Mhz IF,
and one (1) slot for an optional filter in the 455Khz IF.

Q: What optional IF filters are available for the IC-746?

Available filters for the 9Mhz IF include:

Icom FL-101 250 hz (CW narrow)
Icom FL-232 350 hz (RTTY, CW narrow)
Icom FL-100 500 hz (CW/RTTY narrow)
Icom FL-223 1.900 Khz (SSB narrow)
Icom FL-103 2.800 Khz (SSB wide)
Inrad 121 250 hz (CW)
Inrad 111 400 hz (CW)
Inrad 320 1.800 Khz (SSB)
Inrad 110 2.100 Khz (SSB)
Inrad 123 2.800 Khz (SSB wide)

Available filters for the 455Khz IF include:

Icom FL-53A 250 hz (CW narrow)
Icom FL-52A 500 hz (CW/RTTY narrow)
Icom FL-222 1.800 Khz (SSB narrow)
Icom FL-96 2.800 Khz (SSB wide)
Icom FL-257 3.300 Khz (SSB wide)
Inrad 306 125 hz (CW) (might not fit)
Inrad 122 250 hz (CW)
Inrad 116 400 hz (CW)
Inrad 322 1.800 Khz (SSB)
Inrad 314 2.100 Khz (SSB)
Inrad 109 2.400 Khz (SSB)
Inrad 124 2.800 Khz (SSB wide)

(The Inrad 306 is listed on their WWW site,
and is electrically compatable, but might
not fit in the available socket.)

While not an optional filter, W2ENY has a kit to modify
the IC-746 by replacing either the stock 9Khz or 15Khz
wide internal filters with a 6Khz wide filter. See the
"mod" question of the FAQ for more details.

Q: Which optional IF filters should I buy?

Better to ask, "Why would I even need filters?".

Quite possibly, you'll won't need any optional
filters. Use the Twin PassBand Tuning (TPBT) to
dynamically adjust your IF bandwidth first. Properly
used, TPBT can give you nearly any bandwidth you want.
You may decide that you don't need any anything else.

There are over a thousand (1,429) possible combinations
of optional filters. Most of them will make sense
(i.e. be useful) to someone, somewhere. As it is a
matter of style and situation, ultimately, the choice
will be up to you.

We've broken up this issue into several questions, each
targeting a more specific issue or problem. Short of
writting a book, it is the only hope of providing any
useful answers.

Q: What is an IF filter's "bandwidth"?
Q: What is an IF filter's "shape factor"?

Also called "passband", a filter's bandwidth is a
measure of how wide a signal will pass thru the filter.
For IF filters, this is typically measured as the span
between the filter's -6db points. (Some folks measure
bandwidth at the -3db points. Pay careful attention
to the specifications when comparing filters)

"Shape factor" tries to represent steepness of the
filter's attenuation curve. Typically defined as
the ratio of the -60db passband to the -6db passband
(bandwidth). The perfect shape factor of 1.0 is
unobtainable. Shape factors of 2.0 or less are
considered excellent.

This is one of those situations where a picture is worth
a thousand words. A good look at the spectral response
curve of a typical filter will make these terms clearer.

Inrad publishes basic performance curves of most of
their filters on-line. An example of a typical curve is:

http://www.qth.com/INRAD/graphs/116.gif

Several companies have good on-line treatments describing basic filter characteristics, complete with diagrams.

Corning Frequency Control has a very concise page styled in a glossary format at:

http://www.ofc.com/filters/definitions.html

Vectron International also has a nice on-line treatment of filter characteristics at:

http://www.vectron.com/products/xtal/filter.htm#definition

The folks at Piezo Technology Inc. describe filter characteristics with attenuation curves.

http://www.piezotech.com/filter/gen_desc.html#att

Q: Why do filter "bandwidth" or "shape factor" matter?

Narrower bandwidths reject more noise and improve sensitivity. Wider bandwidths provide better fidelity.

Narrower bandwidths also reduce the number of simultaneous signals the rig can "hear". This reduces the AGC pumping action caused by nearby signals, particularly important for CW and digital modes.

Smaller (tighter) shape factors reject more noise and improve selectivity. Larger (wider) shape factors generate fewer problems/complaints with fidelity or ringing.

Q: What is considered to be a narrow filter?

In the context of (and for the purposes of) this FAQ, a narrow filter is any filter that has a smaller bandwidth than the stock 2.4Khz wide filters. However, most texts will describe a filter as being narrow if its bandwidth is smaller than that of the desired signal.

Q: What are narrow IF filters used for?

Usually, narrow filters are used to reject unwanted signals or noise. The narrower the bandwidth, the less noise there will be and the better the sensitivity. You can lose part of the desired signal in the process, but that may be preferable to the interference you're trying to reject.

Q: Can an IF filter be too narrow?

Yes, an IF filter can be too narrow, but sometimes, that can actually work to your advantage. We'll describe only a few specific situations as examples.

When the IF filter's bandwidth is less than the bandwidth of the desired signal, then part of the signal will be rejected. This degrades the fidelity (quality) of the received signal. In phone modes, the fidelity loss is often mistakenly perceived or described by operators as "distortion".

Fortunately, the inherent information redundancy of human speech allows it to be readable even when an overly narrow filter has rejected part of the desired signal. That's where our advantage comes from.

One form of interference is when a nearby signal overlaps your desired signal; as in an overcrowded band. Rejecting the interfering signal necessarily rejects part of the desired signal as well. Thus, the filter is too narrow to allow all of the desired signal to come through, but it is narrow enough to reject the interference. While the result is "distorted" in comparison to a clean signal, it is still more readable than if you left the interference there.

Another example would involve CW or PSK31. The more narrow the filter is, the less the interference and noise. In these modes, it's almost impossible for a filter to be narrow enough to actually reject part of the desired signal, as in the previous phone example. Instead, when a CW/PSK31 filter gets too narrow, you start to experience the auditory equivalent of tunnel vision. This can make it difficult to scan around for signals.

One of the handy things about TPBT is that you can narrow your effective IF filtering bandwidth at any time.

Q: What's the difference between IF filters from Inrad vs. Icom?

Inrad filters tend to have a superior shape factor to Icom's (smaller numbers are better) as well as deeper stopbands. They also tend to be cheaper.

When dealing with adjacent channel interference, the filter shape (depth and slope of the attenuation curve) is generally the prime factor. Inrad filters tend to outperform the Icom filters for this application.

For example. The stock Icom filter in the 455Khz IF has a -6db bandwidth of 2.4Khz and a -60db bandwidth of about 5Khz. That gives it a shape factor of about 2.1 The comparable filter from Inrad has a shape factor of 1.6, a -6db bandwidth of 2.4Khz and a -60db bandwidth of 3.8Khz.

This all means that the Inrad filter has a steeper attenuation curve, resulting in better extraneous signal rejection and improved selectivity.

The Inrad filters tend to have greater ultimate attenuation than the Icom counterparts. Thus, Inrad filters tend to do a better job of adjacent signal rejection than Icom's filters.

However, while the 455Khz Inrad filters are drop-in replacements for the Icom counterparts, the 9Mhz filters are not. They need a short piece of coax and a connector to wired up to the filter first. The adapting connector plugs into the filter slot, thus alleviating any mods to the radio itself. Reported assembly times range from 1-4 hours per filter, depending upon the skill and care of the installer.

Q: Which IF should I put an optional filter into?

Realistically, the performance differences between using filters in the 9Mhz IF vs the 455Khz IF are fairly small and will probably go unnoticed in normal operation.

Most people make this decision based upon slot availability and filter cost.

Q: What's different between IF filters for 9Mhz vs 455Khz?

The 455Khz IF filters tend to have superior performance characteristics while the 9Mhz IF filters tend to be less expensive.

Q: What are the 9Mhz IF filters best for?

When dealing with interference from nearby signals, the sooner you reject the unwanted signals from your RF chain, the better. So a single narrow IF filter in a 9Mhz slot may outperform a single filter in a 455Khz slot.

Q: What are the 455Khz IF filters best for?

On the other hand, filters in the 455Khz IF seem to do
a better job of eliminating background noise, possibly
due to their superior performance characteristics.

Q: How do I get the best results from TPBT?

TPBT works best when the 9Mhz and 455Khz IF filters have
closely matching bandwidths. Non-matching bandwidths
will still work, but are less intuitive, which can
cause confusion.

There are several techniques to using TPBT. The one
described below has the virtue of simplicity.

Starting with both filters in their center, detented,
position (widest effective bandwidth), tune in your
desired signal as accurately as possible.

Grasping both IF shift knobs simultaneously, adjust for
the best sound. If you have a nearby, interfering
signal, then you'll probably have the best results
shifting your bandpass away from it.

Now, adjust just the 455Khz IF shift (the inner knob)
in the opposite direction for the best sound.

Q: How do I configure the IC-746 to use an optional filter?

After you've installed a filter, you need to tell
the radio about it. Using the SET menu, tell the radio
which filter you've installed (by Icom part number)
and which slot it is in. Then, hold in the FILTER
button for two seconds to bring up the filter selector.
Cycle through your available filters by mode and by
wide/narrow until everything is set up the way you want.

See the operator's manual for details.

Q: How do I configure the IC-746 to use a non-Icom filter?
Q: How do I use a CW filter in SSB mode to receive PSK31?

You have to lie to the rig.

All of the IC-746 filter settings are on the basis of
Icom part numbers. (This is supposed to make things
easier for new operators.) Just tell the rig you've
installed the Icom crystal that most closely matches
the one you're actually using.

Lying to the rig does have a side effect.

The 746 cannot actually shift the IF filters' passbands. Instead, the 746 shifts the LO frequencies of the 2nd and 3rd IF stages to shift the signal back or forth, aligning the edge of the desired signal with the computed edge of the filter's passband.

Small lies generate small effects, like when you tell the rig that a 2.1Khz wide filter is actually 1.9Khz wide, yielding a 100hz offset in the control. Larger lies generate larger effects, like when you tell the rig that a 400hz filter is actually 2.4 Khz wide, yielding a 1,000hz offset in the PBT control.

Q: How do I use a CW filter in SSB mode to receive PSK31?

Icom took their ease of use one step further, and programmed the rig to prevent the use of a CW filter while in SSB mode. They didn't know about PSK31 at that time. So again, you lie to the rig during setup, telling it that the crystal is wider so that the rig will allow you to select it for SSB use.

Q: Why is there only one optional 455Khz IF filter slot?

Nobody knows for sure, but the most popular speculation is that it made the radio cheaper.

Q: Where do I install a 2nd Inrad 9Mhz IF filter?

According to K7ZL, the place Inrad tells you to put the filter is way over on one side in a little opening next to a fan, and that works fine. But he has found a second location. When you have the rig opened, if you go on a line from the 9 Mhz filters, then to the 455 Khz filters, and keep on going towards the front panel, you will see a square metal plate on the circuit board. He mounted his second filter on top of the metal plate, on its side, and it seems to work fine.

Contributors + Acknowledgements

There are two kinds of contributors to this FAQ: direct and indirect.

Direct contributors have written entire passages that have been incorporated nearly verbatim. Often, they are

specifically authoring something with the FAQ in mind. Also, they are individuals who have been recruited to review specific sections prior to distribution.

Indirect contributors have had their comments and input collected and assimilated from public correspondence on discussion and news groups, often without their knowledge. They were simply answering questions, offering advice, or otherwise just helping people out.

The coordinator has not tried to keep a record of who has contributed what; the book-keeping would be horrendous. All sources of information have been INVALUABLE and are APPRECIATED. Listing contributors here is a small token of thanks for their neighborly spirit and generosity. The Coordinator apologies if anyone has been missed.

Source record: 57760

Yes, you're reading it right, unfortunately. This is one of my biggest complaints about the 706. It has two scan options:

-scan until it detects a carrier, then stop forever (stupid...)
-scan until it detects a carrier, then hold for 20? seconds and resume.

What it doesn't have is what it needs most: A "stop until drop" scan option where it stops on a freq as long as there's a carrier, then when the carrier drops, resume the scan.

159. FS: Yaesu FT-847 EarthStation HF/VHF/UHF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-03 05:27:38 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <eJc07.288464$p33.5777078@news1.sttls1.wa.home.com>
Source record: 57761

Yaesu FT-847 EarthStation HF/VHF/UHF Rig

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* MFJ 1278B TNC Adapter Cable
* Manual
* Original Box
* All Yaesu Factory Upgrades as of June 2001 (Including new processor and AF Gain Upgrades)

This rig is great for HF/VHF/UHF work.
It has worked many satellites, and the International Space Station on several occasions.
The InRad filter improves HF SSB operation tremendously.

$1325.00 plus shipping from 97006

Thanks,
Rick

161. Re: WTD: QST 8/82

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-03 06:26:03 UTC
From: Rick Kaumeier <k0vj@arrl.net>
Message-ID: <rqo2kt0ffn6pg439tfu81rgqftjg3g2ole@4ax.com>
Source record: 57763

About 30 seconds with the Google search engine turned up this link
relating to copyright and fair use:

http://fairuse.stanford.edu/library/faq.html

The quote that seems most pertinent appears about three quarters of
the way into the FAQ.

<cut & paste>

Although all of these factors will be considered, the fourth factor is
the most important consideration in determining whether a particular
use is "fair." Where a work is available for purchase or license from
the copyright owner in the medium or format desired, copying of all or
a substantial portion of the work in lieu of purchasing or licensing a
sufficient number of "authorized" copies would be presumptively
unfair. Where only a small portion of the work is to be copied and
the work would not be used if purchase or licensing of a sufficient
number of authorized copies were required, the intended use is more
likely to be found to be fair.

</cut & paste>

In my (admittedly non-legal) opinion, the "small portion" of the
original QST that the review makes up would seem to fit this scenario.
For what it's worth, I'd bet that the ARRL legal staff isn't exactly
breaking a sweat over the Xeroxing of a two-decade old review. If
someone were to start scanning the entire back library of QST reviews
and offering them for sale on CDROM, that would be another story.

Respectfully,

Rick K0VJ
Ham and ARRL member since '83

About 15 seconds research turns up the actual US Code concerning "fair use," (17 USC Sec. 107) which states:

"the fair use of a copyrighted work, including such use by reproduction in copies ..., for purposes such as criticism, comment, news reporting, teaching ..., scholarship, or research, is not an infringement of copyright."

Fair use does not cover copying for personal usage. The common thread running through all of the purposes explicitly stated in the code is that the result of all of those uses is of public (and not private) benefit.

Source record: 57767

10 PIECE BRISTOL SPLINE WRENCH SETS FOR COLLINS & HALLICRAFTERS. I have for sale the original hard to find 10 piece Bristol spline wrench sets. These are "L" shaped, made in the USA, and come in a fitted vinyl pouch. Includes all necessary sizes for Collins (even the tiny size for the 75A-4 main tuning knob), Hallicrafters, Johnson, and others. Price is $20. per set postpaid USA, $22. postpaid
World-Wide.

166. FS: Heathkit DX-40 transmitter

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-03 13:59:15 UTC
From: k5dh@raytheon.com
Message-ID: <Tck07.187$Mf6.3628@dfw-service2.ext.raytheon.com>
Source record: 57768
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For Sale:

Heathkit DX-40 transmitter. Front panel looks really nice.
Two small scratches, otherwise clean and shiny. Correct
knobs, meter, switches, jacks, etc. Cabinet is fair, with
some chipping, scratches, etc, but not hacked up or dented.
NOT ORIGINAL INSIDE. Power transformer was replaced with a
non-Heath part. Extra set of filter caps added, originals
replaced, 5U4 replaced with 1N4007 diodes. Tubes are good.
All AM modulator components have been removed. Rig works
fine on CW on all bands, but does not work on AM (AM could
be easily restored, I just don't have the inclination to do
so). Here is a link to a photo of the front panel:

http://www.qsl.net/k5dh/dx40.jpg

Asking $50 plus shipping. Not really interested in trades
at this time (too much gear already; trying to thin out!).

This is NOT a "collector's item". It's a good CW rig that
you can get on the air with and have some fun, and not have
to worry about its "collector value".

73,
Dean, K5DH

Why are you investing in HF capabilities when NONE of your operating will be on HF???

I have friends who have both radios. The Icom has REAL filters in the IF. Yaesu cheaped out and uses ceramic filters with lower Q which produces lousy shape factors ("soft" skirts). They try to tell you they take up the deficiencies in the DSP. NOT! Go with the '706!

Dave - W0LEV

169. DOC in Calif! 350XL Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-03 14:57:21 UTC
From: jml@satx.rr.com
Message-ID: <3b41daaf.11567318@news-server.satx.rr.com>
Source record: 57772

Where are you now that I need you? ha!
I have the winning bid on a 350XL, but the seller just emailed me that it now has a problem.
Output is low (3-4 watts) on 20 meters, but OK on the others.
Does this sound like a simple fix? He is trying to repair it, but has tried alignment with no sucess.
What are your thoughts on the difficulty of the diagnosis (Dr. jargon) and repair? vy 73

MORE RADIOS FOR PIRATES
MAGNUM IS BRINGING OUT ONE THAT WILL GO AS LOW AS 20 METERS. WE HAVE ENOUGH
CB INTRUDERS AND OTHER PIRATES. THESE RIGS ARE MADE FOR CB PIRATE TYPES.
DONT LET YOUR HAM DOLLARS SUPPORT A COMPANY THAT ENCOURAGES THE BLATANT
DESTRUCTION OF THE HAM BANDS.

yes George.... The TS520 was a great radio.... I especially liked the
similarity in features compared to the 756pro.... like the color
digital display, DSP, and lets not forget the electronic memory
keyer.....

My fellow hams have been raving about the $300 price tag for this glorified CB. Well c'mon, do some research! This particular chicken-band hybrid is the "low power" version of the RCI-2990DX, a 100-watt radio that includes 10 and 12 meters, and retails for $599.95!!!

Can you believe a two-band HF rig for $600? Ham Radio Outlet is currently selling the all-band Kenwood TS-50S, which has many more features and a much better receiver, for only $100 more! Who in their right mind would pay that kind of money for the RCI? (I know, I know.)

(If these radios weren't meant to be modified, then why do they have frequency counters? Do CBers really need to know which frequencies their 40 channels are on? They do? OK. I'll wait for RCI to come out with the first TV set that displays 205.25 MHz when I'm watching channel 12.)

Breaker 27.185, good buddy!

I think that your response was really directed to "willy" but the thing I miss most with the PRO that we had with the TS520 was getting to neutralize those parallel 6146's on ten meters! Or, maybe I just haven' found that adjustment yet on the
PRO . . . <:}

From: Bob Dodson <wb5apd@alltel.net>
Message-ID: <3B41EE60.D49C16A3@alltel.net>
Source record: 57778

I just recently had both IC-746 and FT-847 side by side. The IC-746 is
MUCH better radio. The Ft-847 has so many problems and deficiency's I
could not begin to list them all. It is the worst yaesu I had ever
owned. Pwr switch will burn out, Headset jack has low audio, Birdies all
over 70cm, main tuning knob wobble problems, power drift on 70cm, poor
freq readout on 2m and 70cm, ext ant tuner worthless on anything above
at 2:1 match etc etc. I have also had FT-990, FT-1000D, FT-736 R etc and
they were all fine, no problem and worked like they should.
The IC-746 also worked exactly like it should with great recv, vox,
great ant tuner, memory keyer, adj speech compressor etc. All the
things a normal HF rig should have that FT-847 did not have.
I used both mainly on ssb/cw 2m and 70cm. I gor rid of both rigs for a
TS-2000 and would never go back to either. I must say though the IC-746
was a GREAT rig and for the money would have it vs the TS-2000.
For HF/2m only the IC-746 I think is the way to go. I wanted 70cm also
so that is why i wound up with the TS-2000. I don't do Sat's either.
BTW The TS-2000 is the most advanced vhf/uhf rig I have ever had. It
does it all and ALL works like it should. In fact if will do things that
NO other rig I have ever owned would do. I am really a yaesu guy but the
FT-847 was a disaster IMHO..

Professional-grade programs slanted towards radio amateurs. A variety of technical subjects including simple coil and capacitance loaded antennas, transmission lines, Pi-L networks, power amplifiers, ground radials,

Small single files. Download in a few seconds each. Not zipped up. Run immediately. Enter numerical data. Obtain numerical output.

No catch. There ARE such things as free lunches after all.

Hi

Can anyone who owns or has owned this radio let me know of their experiences with it please.

Good and bad points, things to look out for and any musts with operating(filters, settings ect).

Are there any web sites(information pages) that are for the TS-570DGE??

Cheers

Richard

Michael;

Are you just checking or are you having a problem?

I have three bath rooms with GFI's and also work shop and several on outdoor circuits. Never had any trip due to RFI from my transmitters. At times I run legal limit 160 through 10 meters and between 100 and 500 watts on 6 through two meters down to QRP. I also have never traced any received interference to any of the GFI's.

From: Zach Sadecki <zsadecki@hotmail.com>
Message-ID: <K2s07.12873$WT.2503032@typhoon.austin.rr.com>
Source record: 57792

Thanks for the input guys... I really appreciate it. It seems like I have heard many bad things about the 847, so I guess I'll definitely have to avoid it. Now I'll just have to decide just how important 70cm is and decide between the IC-746 or the TS-2000... I don't know if I really want to spend the extra ~$800-900, but we'll have to see how the 746 vs 2000 thread ends up :)

And to answer your question, Dave. I'm looking at it this way: I'm going to get a vhf/uhf rig that throws HF in for free(or close to)... There aren't any radios that have the same features / quality / price and don't also include HF coverage... My #1 feature is 6M, followed by 2M & 70cm... I'm gonna look at the Ten-Tec 526 after some reviews come out on it, but it looks like it's missing a few of the bells/whistles that I'd like, and only puts out 20W. And the only other newish vhf/uhf rig I've seen is the IC-910, which is just as expensive as the 746 and not that great according to many reviews... Anyways if I could find a rig that had a good receiver, DSP, and a few other bells/whistles and put out 50-100W on 6, 2, and 440 and cost ~$1200, then I might consider it. And as far as I can see the big 3 manufacturers figure if they're putting in all those fancy things they might as well drop HF in there too... But Ten-Tec almost got it right ;)

The ones I used to hear on 10m couldn't touch much of anything. I
can't remember the exact model number, but the ones I've heard over
the past few years have had to be some of the most pathetic radios
I've ever run across.
Constantly FM'ing, RF problems with the audio. etc, etc. A friend of
mine had one, and the transmit audio was so bad you couldn't hardly
use it. I used to talk to a guy in CA with the same problem. I ain't a
jokin...My 706 would eat one of those suckers for lunch and spit out
the seeds. Oh heck..Any radio I have ever had in the last 20 years
would have been better...:/ And I don't have high end radios either,
except for my 830. "it's old now, but was top of line kenwood when it
was made".I'm not on a ranger dissin program, but they were bad bad
radios back in the late 80's early 90's. And still are I imagine,
until I see different. MK

197. Need help with icom icu2AT hT

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-04 01:01:51 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3B426AFF.5275C5C7@ix.netcom.com>
Source record: 57796

My Icom ic-u2AT isn't working correctly anymore.
When I turn it on I get no display on its LCD display,
no sound on receive even with squelch open. Only thing
that does anything is when I push the PTT button the little
TX led lights. Don't know if it transmits or not, don't know
what frequency if it does.

Anyone recognize this condition? Maybe the backup
battery died? Anyone do repairs on something this old?
I liked the easy control of frequencies, didn't need a
manual to figure it out.

Date: 2001-07-04 04:21:14 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <_Qw07.292199$p33.5876149@news1.sttls1.wa.home.com>
Source record: 57705

Yaesu FT-847 EarthStation HF/VHF/UHF Rig

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* MFJ 1278B TNC Adapter Cable
* Manual
* Original Box

This rig is great for HF/VHF/UHF work. No smoke, never mobile.
It has worked many satellites, and the International Space Station on
several occasions.
The InRad filter improves HF SSB operation tremendously.

$1275.00 plus shipping from 97006

Thanks,
Rick

I replaced the SSB filter with a 2.1 from International Radio which
helped HF quite a bit.

I use my 847 for vhf/uhf mostly.

What faults? :-)

210. HELP - Interference is 20 OVER !

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-04 06:17:57 UTC
From: Dave Schmidt <n9nlu@earthlink.net>
Message-ID: <pyy07.50$oa1.9761@newsread1.prod.itd.earthlink.net>
Source record: 57709

Hi all,

I need some help. I recently moved to a quite little village, but its not so quiet on the radio bands. There is so much electrical interference that it totally blots out broadcast AM stations, creates havoc receiving local 2 meter repeaters, and forget about working SSB here... ya just can not work any DX with a 20 over interference noise level.

Just by listening to the noise, I can tell its 2 different sources, maybe more. One of the sources is a constant buzz that goes on and off, as if it was switched on .... like a floresent light or something. The other is more of an arcing noise. The arcing noise isn't as strong as the buzz, but still, its an S5-S8 on my 706MKII. I've somewhat located the noise by driving through the neighborhood with the 706. I've called the electric company with pole numbers and street locations on this one. That was over 1-1/2 months ago. Its still arcing away and tearing up the bands.

Its this pesky buzz that is so strong that wipes out broadcast AM radio and wipes the HF signals off the map. I have a strong feeling that one of the people in my new neighborhood has a very noisy dimmer switch or a floresent light that is noisy.

My questions are:

1 - Does anyone have any plans/instructions for a compact HF antennas that can be used for directional interference locating?

2 - If I should find that its one of my neighbors that is creating this noise (unintentionaly).... does anyone have any sugestions how to aproach them about their faulty equipment that is making noise?

3 - Anyone in SE Wisconsin (around West Bend) that wants to do a little "live" intereference hunting, feel free to e-mail me so we can put our heads together and solve this MAJOR problem here.

4 - How can I set a fire under the electric companys ass to get them to fix the arcing noise? --- Do I have to chop down their pole or something??? -) ---

Thanks for your time

Dave

Message-ID: <Klz07.21119$e5.53709@newsfeeds.bigpond.com>
Source record: 57711

By pressing FAST and LOCK while turning the radio on the menu options 9-0 to 9-9 can be accessed. This way the radio can be set to transmit out of band (Option 9-9 GEN) Apart from this well advertised mod all other options are rather vague.

Is there anyone that knows where to find or who can explain the significance of the various hidden menu options....???

I am talking about the MPmodel - The MarkV owners are warned off to change anything other than the 9-9 options. Why is that?

I have the standard 2.4 kHz and added a 1.9 kHz in the first IF.

It wasn't worth it. I recommend that you not bother with additional SSB filters. The DSP is good, and I get much more benefit out of the PBT than the narrower filter.

I also added a 350 Hz filter for CW and RTTY. That one is well worth it.

Mmmm forget the gadgets and sixty colors boys. Lets get back to the specifications. Now lets see whats the the third order intercept point of the IC756 PRO. What about that wonderfull thing called blocking dynamic range. Lets not forget the 2nd order intercept point.

In Some ways i might mention that gastly Drake R4C, which seems to be better behaved in the strong signal environment, i wonder how the PRO compares to that dinosaur? I suppose the Drake must overload and get distorted like the PRO with broadcast shortwave signals on 15 metres. I suppose Drake and and Kenwood TS520 is so bad the receiver falls apart worst than the PRO on 160 metres during a contest. Anyway you have your electronic key, no tune and it must be nice watching TV on that color display.

Icom must really know who they selling their boxes too!

Both great rigs. Operated both but own the FT-100 going on about two years now. It's more compact than the 706 by just a little bit.

FT-100 has had some historical RF problems (spurious oscillations) fixed by factory or self-installed grounding. I've been very impressed with Yaesu service---turn-around within one week and no subsequent problems. They know what the problem was and took care of it, no questions asked, all within the one year warranty period. I doubt if current production models have the same problem.

I've operated portable and extensive mobile and contesting, east to west coast, without problems. Great signal reports. Fine performance on hf SSB/CW and vhf/uhf FM. Haven't dabbled in other areas.

My setup included the FC-20 tuner (but I think most people would recommend the LDG-11 tuner), Pro-Am single band "sticks", separation kit, which places the main body of the radio in the trunk. I've also added the CW filter. Routed radio audio output to the car's stereo system through one of those cassette adapters. Can't beat it.

Good luck with your choice.

As new Yaesu FRG-100B (1999 production) with installed optional FM board and 500 hz Collins CW filter. Also included is a BEEI remote key pad for direct frequency entery and rig control. Comes with original factory operators manual and factory service manual along with the "White Paper" issued from the test of this rig.

Immaculate condition.... non smoker, no dust really is as new. Digital pics on request. Asking $550 plus shipping, certified funds or PayPal only. Even with the recent price reduction to $480 on the FRG-100B at AES this set-up plus the service manual would cost you $800 to duplicate as a package.... save $250 and the sales tax and pick up this deal. You won't be sorry.

Regards,

Mike

Problems like yours are all too common these days, and it takes a lot to get them fixed!

> My questions are:
>
> 1 - Does anyone have any plans/instructions for a compact HF antennas that
> can be used for directional interference locating?

Most RFI tracking is done either at VHF (AM) with yagis, or with a simple AM broadcast band reciever. There are more sophisticated ways of doing it, and your '706 may be the best tool for locating problems. It sounds like you already found one, and you should work to fix that one, and then track down the next one.

>
> 2 - If I should find that its one of my neighbors that is creating this
> noise (unintentionaly).... does anyone have any sugestions how to aproach
> them about their faulty equipment that is making noise?

Although it may not seem like it, it's the power company's problem when one of their customer's equipment is causing interference. If you know the neigbors REALLY well, you might enlist their help, but in most cases leave it to the utility co.

>
> 3 - Anyone in SE Wisconsin (around West Bend) that wants to do a little
> "live" intereference hunting, feel free to e-mail me so we can put our

Check the local ham radio club if you have one.

>
> 4 - How can I set a fire under the electric companys ass to get them to
fix
> the arcing noise? --- Do I have to chop down their pole or something???

The FCC has been doing a good job of that lately, at least with the notorious PG$E here in Northern California, and if you keep mentioning to the power company managers, in a non-confrontational manner, that they have responsibility to the FCC, you will get a response. Remember that the "squeeky wheel gets the grease"! Keep calling and writing letters...again, non-confrontational, to keep your problem top-of-mind. Contact the FCC as a last resort.

I highly recommend a book called "AC Power Interference Manual" by Marv Loftness, KB7KK. It's very hard to find, but I think you can get it at Amazon.com., or through the publisher, Precival Publishing, P.O. Box 4122, Tumwater, WA 98501. It's definitly the "bible" for this problem!

Good luck &73..

228. FS: Yaesu FT-847 HF/VHF/UHF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-04 19:56:42 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <_xK07.296278$p33.5946952@news1.sttls1.wa.home.com>
Source record: 57726

Yaesu FT-847 EarthStation HF/VHF/UHF Rig

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* MFJ 1278B TNC Adapter Cable
* Manual
* Original Box

- Great for HF/VHF/UHF work.
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter greatly improves HF SSB operation.

$1275.00 plus shipping from 97006

Thanks,
Rick

There ought to be an extra manual out there somewhere because when I bought my IC-281 used, it came without a manual. So I bought a new manual from Universal Radio in Columbus/Reynoldsburg OH for about $25 or $30. The new owner now has the manual.

As I recall, it was a fairly complex radio and I ended up using the vfo a lot until I got the manual and was able to program everything in.

If you buy used Radio Shack gear, their manuals are downloadable, but not ICOM.

Hi:

This is for a short time only !! (Only a few left @ this intro price) Ends 7/10

Have you been looking for a Smartnet Radio that
is easy to program?

All of these have been checked over, in perfect working
order, they Also have the (A Through P) Selector Switch
and EMERGENCY BUTTONS.

SPECIAL NOTE:

THESE ARE SECURENET CAPABLE with the correct hardware (Not installed)

NO Engraving and the Cases are in Excellent Condition (All with the
Factory Model Serial Tags. All of these radios have been maintained
by a Factory MRSS

Models are H35WPA5170DN, Serial Series 678ARGXXXX,
Has Antenna in Perfect Condition
Has 1999 Date Code Battery (Analized with a Motorola Analizer to insure
optimum performance)

These radios are the latest series cramed with all the
features one could want. Has GPL 1.0 / GPS 1.0
Firmware, will do all the others too.

ALL THESE RADIOS ARE GUARANTEED TO MEET FACTORY SPECS !!

ALL ARE IN Excellent Condition. (At least 8-9+) Comes with a Factory
Motorola Battery 99' code date, antenna, and will program for free if you
send a Code plug.

I also have the Factory Rapid Chargers for 15.00ea;
and Factroy External Speaker Mic for $20.00ea.
If you desire a Multi-Unit Charger, I have those too for 65.00+Shipping
(These sold with radio only)

Photo @

http://www2.4dcomm.com/metrotech/stx_821.jpg

Our Web Site is under development @

http://www2.4dcomm.com/metrotech/

Please allow $ 8.00 for Shipping and Handling ($25.00 International)

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

thanks for the help
I can't figure out why radio manufactures can't make their manuals free and down loadable? I have been able to DL the manual for my alinco-580 and other radios but have not been able to find one for Icom. It is not like it is a secret or something.

Compare the "menu" options between the two. The 450 was introduced after the 850. On the TS450S,You can control the carrier
offset + or - , on LSB and USB seperately to adjust the ssb audio characteristics.. On the 850, the adjustment
must be done internally.

SGC and Ameritron have solid state non-tune amps in that power range, but none of them have automatic antenna tuning. Icom makes a 1-kw amp with antenna tuner, and so does Yaesu, but they're in the $4000-5000 range, price-wise, and would probably need 220 volts.

The Ameritron AL-811 and 811H tube-amps run on 120 volts, as does the AL-80B.

Message-ID: <5W%07.564$1R.153471@news-west.eli.net>
Source record: 57652

From my own experience with the FT100D it at best is a great radio if you enjoy having it in the Yaesu repair shop most of its life.

I tried 3 of the rigs , all new in box, and none of them worked properly. Poor sensitivity, very unstable receive and sever overheating problems. This is a common trait of the FT100D but check the 100D user group at http://groups.yahoo.com/group/FT100/messages
and see the many complaints.

I finally bought a 706MK11G and its works very well.

It to has its faults, DSP that works just OK and a NB that is great on ignition noise and nothing else.

Would urge anyone who gets a rig to get from a really good dealer as the initial thrill of the purchase can cover up many problems.

I made my purchases at AES and without their help I would have been stuck with a very poor initial purchase of the 100D.

>TS440SAT) that produces around 500W?
>

Yaesu made the FT7000 and now the Quadra (both 500W @ 120VAC)
Icom made the 1KL and 2KL and the AT500 tuner
TenTec made the Hercules II, and a matching autotuner #253

Of them all, I've used the TenTec, and it is literally transparent,
like having a 500W transciever. The FT7000 is hypersensitive to even
moderately high SWR, but can be modified to be less so. I've not
tried either of the Icoms. The Quadra is my latest lust, but at
nearly $4000 USD I'll be drooling ... and little else ... grin!

Other replies list amps that DO NOT include an auto antenna tuner. Do
your homework carefully.

From: chris <k4rch@yahoo.com>
Message-ID: <9i2spp$pf4$1@bob.news.rcn.net>
Source record: 57663

Hmmm, with $4k what would I buy? I would probably pick up one of the
following: Yaesu FT1000D, TenTec Omni VI or a Kenwood TS-950SDX. But,
seeing that you have an IC-756, I would wait till the IC-756 Pro II is
available for sale and trade up. Then I would spend the rest of the dough
and get some serious antennae, some new shack furniture and possibly pay off
the credit card as well.

73,
Chris

I am considering buying the Yeasu FT-100D transceiver with the ATAS as
a package.

Does anyone have any information about the ATAS antenna? Anyone
own/use one? Does it work, specifically as mobile?

The antenna sounds almost like "snake oil," too good to be true.

Thanks,
Turner

I have a rohn 25 tower. 3 full sections 1- 5' section.
I have pics if your interested.

the Glen Martin Hazer H-2 with the roller bearing wheel kit installed.
1- 7 element 5 band beam 17-6 meter beam 40' long built by KMA Antennas

in New London N.C.
1- 40 meter rotatable HI-Gain Antenna
1-AR-10 Ringo 10 meter vertical.
1- Hy-Gain IV rotor and control box.
also incuded guy wires.
Everything in still in the air but with the hazer on the tower no
problem to take antennas down.
Reason for selling relocating.
Buyer must pick-up local Greensboro north carolina and take down I
will
help with the take down and loading on your truck or trailer.

Hello. I have a VHF high power Motorola Maratrac Drawer, model # T73XTA7TA7BK. This units factory specs are 99 channels, 100 watts, 150-174 MHz, but I have other ones programmed down to 145. MHz with no problems. This is a left over drawer that I have from some that I purchased used. This drawer has no accessories (mic,cable,head or mounting plate). I have tested it and it works well. I am looking to trade this drawer for a used, but working Low Band motorola dash mount unit. A Maxtrac or M208 is what I am looking for. It has to have atleast 6 channels and scan and the split has to be 42-50 MHz. I need one for the local Low Band fire frequencies. I do not need accessories, I have everything here for it. Please E-mail me direct if you are interested in a trade. Thank you in advance for your time!

I run an original FT-100 (not the D model) with the ATAS on the roof rack of my Chevy Blazer. Both the rig and the antenna have worked flawlessly since day one, tunes all bands no problem, and I get lots of 5-8 - 5-9 reports both stateside as well as into Europe and Japan on 17 and 20 meters, and stateside 40 meter nets are no problem - even at night. However, if you need to run 75 -80 meters mobile, you will need an additional antenna for these bands (I keep a 75 meter hamstick in the truck for the rare times I need to do 75 while mobile).

I have to admit, I did not expect the ATAS to work this well for as small as it is, but compared to my previous setup - an Icom 706 and various hamsticks - the difference was amazing. It only took me three days of running with the Yaesu setup to put the Icom up for sale...

Heil Goldline GM-5 (has HC-5 Element and also the Goldline Full Range Element) with PTT
base and Kenwood Cable. Have all orig box and packing for it including zippered case. It is
about 3 months old. Works and looks fantastic. I decided to use a headset here instead.
New would all cost $175.00 plus ship. Will sell all for $125.00 plus $8.75 to send by priority mail FIRM.
You can see pic's of it here.

I think I'd just save my money if I were you. The 756 is a very good performer, but any rig you buy will be similarly limited by your choice of antennas. I doubt if you would be able to realize any great improvement regardless of what rig you use unless you could improve your antenna situation.

Perhaps you should make a small investment (around $150.00) in a ClearSpeech speaker first. These things are amazing at improving your weak signal copy ability on any rig you use them with...

73 and good luck in your quest,

Dan - W6DKN

It's going cheap. Last hours are left.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1251636557

"NO RESERVE" COAXIAL DYNAMICS MODEL 81000-A HAS OPTIONAL FEMALE QC
N-CONNECTORS
(SAME AS BIRD 43) "ALSO COMES WITH ORIGINAL MANUAL" NOTE- ALL BIRD 43
ELEMENTS WORK
100 % IN IT. BIRD 43 AND COAXIAL DYNAMICS ELEMENTS ARE INTER-
CHANGEABLE. Coaxial Dynamics
also sells an add on Peak Reading Kit same as Bird does for their model
43 (to make it same as Bird 43P). This one looks
almost brand new and works 100%. NOTE THE LARGE "MIRRORED SCALE" AND
MUCH "LARGER EASIER TO
READ METER" THAN A BIRD 43. I am selling JUST the meter and the original
manual. Buyer to pay fixed
packing/shipping charge of $10.75. Payment by Postal MO or Bank Cashier
Check.

Of the rigs available today, "I" find the Kenwood TS-870S to be the best and I say that based on its great audio. It has such a great sound out of the box, even before you get into fancy mics or external speakers - it sounds great!!

It's a nice "medium" size, doesn't need extra filters has a great CW keyer, etc. The TS-870 is a rig to own.

There's nothing wrong with your rig, especially for CW. Here's my
wish list, all loaded with filters, of course:

TenTec Omni VI+
Icom IC-781
Kenwood TS-950SDX
Yaesu FT-1000D

As a CW op, I say screw DSP, even in the IF, give me a good set of
crystal filters any day. You can add audio DSP easy enough. I have
the Timewave DSP-59y (same as the 599zx) built into my SP6 which I use
with my FT-990, and it offers only marginal improvement, and adds
little to my CW experience in most cases.

Your main concern, though, is your compromised antenna system.
NOTHING you can buy will give the increased performance a simple $20
dipole at 60 feet would.

Source record: 57604

If you like the headset you have, why not just use a small transformer to match the impedances? I've used a very small 120V - 12V power transformer to match 600 ohm phones to 8 ohm outputs on more than one occasion. The 10 to 1 turns ratio gives you a 100 to 1 impedance transformation, which is close enough.

301. Re: FT100D vs IC706MKIIG Which to buy ?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 01:27:15 UTC
From: kg4fet@aol.combadspam
Message-ID: <20010706212715.20473.00001135@ng-mk1.aol.com>
Source record: 57605

I would be willing to put my FT 100 and my money against any IC 706 anyday. The FT 100 has a better RX'er, better DSP, a working NB, CTCSS Decode is an option on the 100 and included on the "D" model, but you cannot even get it as an option with the IC 706. The only thing the IC 706 has going for it over the FT 100 is that you have more CAT options with the firmware in the 706 then with the FT 100. If this is the deciding factor in the purchase of a rig then get the 706. If you want a very good rig with better recieve including into the 800MHz range, although recieve outside of the amateur bands is not garunteed(which by the way the 706 will not do at all by the way) get the FT 100,BUT go into it with the idea that it has 2 minor problems with some rigs including a spurious osc at 13.750 that causes an SWR indication in 10 and 12 mtrs, and the second is a lack of fan cycling on U/VHF in idle that causes heat build up. The SWR fix is as simple as adding one more ground strap inside the rig (no Big Deal and I have pics of the mod). The fan mod is as simple as shorting one leg of a trasistor to ground and the fans will run all the time but the rig will stay cool or there is a circuit board that some of the guys in the Yahoo group are working on that uses a reed switch to switch the fans on and off in idle or Yaesu has a mod they da as well which I have pictures of. These I included if you decided to buy a used rig that need the mods done. I reccomend you do look at the Yahoogroups for both rigs too. In the FT 100 group you will find amid the pissing and moaning of some guys who are slamming a rig that they don't even have anymore you will find a group of people that care about the rig and a flow of ideas for installs, setups, hints on working satallites with the FT 100, ect ..In the 706 group you will find, well, nothing. Nothing at all, little info at all. K0LEE has a page dedicated to the FT 100 that is linked from the yahoo group. Please as an earlier poster stated look at the FT 100 group.
Good luck and all the best to all
DE KG4FET Sandor Proud Owner of Yaesus FT 100
By the way please feel free to email me with any questions you might have with regards to the FT 100 and my side by side comparisions of the FT 100 and various models of the IC 706 rigs.

Not to be smart-alecky, but even if you get a better receiver-side, you'll just
have even weaker signals that you cannot copy very well :-)

That sounds great; apparently you got a good Yaesu. But how would you address the person in this thread who bought three ft-100D's, and ALL THREE were defective, out of the box?

Sounds like there are still reliability problems with this little rig.

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* MFJ 1278B TNC Adapter Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1275.00 plus shipping from 97006

Thanks,
Rick

Scaled back on tower plans.

1) NIB, never hooked up Ameritron RCS-8V remote coax switch.
1 in 5 out N-connectors. Uses 6 wire cable.
Good to UHF.
$120 including shipping to CON US address.

2) Advanced Receiver Research (ARR) MML50VDG mast mounted
6 meter GaAsFET preamp. Used but in good condition with locking
DIN plug for control/power cable and manual. 24dB gain, <0.55 dB,
50-54 MHz. Handle 160 watts and can be RF keyed or wired for hard
keying.
Requires 11-16 VDC at 180 mA.
$55 including shipping to CON US address.

3) Have extra Motorola Model N1274A VHF (2m) amp.
1-5 watts in - 10 to 50 watts out (I am getting 70w out
for 5 in on mine) with 4 pin Jones plug. Broadband,
rated at 136 to 150.7 MHz. "almost new in box" - Friend
used it for about a week with HT in car till mobile rig arrived.
Plug and go - no tuning needed on this one.
$70 including shipping to CON US address.

email bbrackin@bellsouth.net - thanks - Bruce, KD5IUG

Perhaps this sounds flip, but it's not meant to be....

But if money were no object (even just that $4K), and you really wanted to be able to do a lot better with your hamming.. why not find a nice place out in the country, maybe on a hill, and move there. :) That $4K plus the equity in your current home would most likely get you into a nice place away from expensive neighborhoods with a covenant.. (I hate the idea of covenant neighborhoods... for my money it's no different than censorship... whatever happened to "land of the free" and the "American dream"????

From: Brenda Ann <brendaannd@uswest.net>
Message-ID: <9i5v91$r9r$1@news1.kornet.net>
Source record: 57618

I just bought a new 30 amp supply for a ham rig that I just ordered, so I no longer have a need for my nice 12 Amp regulated supply. The supply is 12 amps steady, 15 amps surge or short duration, and will run on either 120 or 220 volts. It comes equipped with a Eurasian type power plug and a North American plug adaptor. It is a metered supply, both volts and amperes. The meters are lighted. Unit has three sets of universal connectors (2 front, 1 rear) that take plain wire ends, spade connectors, and banana plugs.

I paid $85 for this supply a couple months ago, and it has had only about 15 hours use. It's a 10 cosmetically and a 10 electrically. I would like to get $60 for it.

Thanks..
Brenda Ann

You can't go wrong with the Heil Pro-set and the appropriate adapter cables. They are by no means inexpensive, but after you've tried a set, you'll never want to use anything else. Our local ham club bought two sets for Field Day, and you can't believe how much nicer it is to work those long runs late Saturday night. I spent 14 hour operating and worked over 1,000 stations with no "sore ear" fatigue! Super quality transmit audio, too.

Now if we can only get some more comfortable chairs!

73,
Ron

> I would be willing to put my FT 100 and my money against any IC 706 anyday.
> The FT 100 has a better RX'er, better DSP, a working NB,

I'm curious... What is better about the receiver? I like the receiver
on the 706g, so if the ft-100 is better, it must be pretty good.
Dunno, my noise blanker seems to work ok. They can be adjusted to work
better if needed many times. The DSP I'm not really worried about, as
I think it's fairly useless overall on both rigs. My outboard DSP on
this computer is light years ahead of either rigs DSP. And I still
really don't use it much except for CW at times. To me, DSP is a fancy
trinket that sees little use for me in the real world. I'd rather have
good filters. :/

If this is the deciding factor in the purchase of a rig then get
> the 706. If you want a very good rig with better recieve including into the
> 800MHz range, although recieve outside of the amateur bands is not
> garunteed(which by the way the 706 will not do at all by the way) get the FT
> 100,

Weeeelll, the 706 has out of band receive, just not as far up as the
ft-100.
The 706g is 30hz-200 mhz, and then skips 200-400mhz and then receives
from 400-470 mhz . So you can get police, normal air, etc, but the
ft-100 would have the advantage of being able to receive the military
airband between 200-300 mhz. Thats the only band I can't get on the
706 that really matters to me. I don't care much about the 800 mhz cuz
I'd rather use a trunk tracking radio if listening up there.

In the FT 100
> group you will find amid the pissing and moaning of some guys who are slamming
> a rig that they don't even have anymore you will find a group of people that
> care about the rig and a flow of ideas for installs, setups, hints on working
> satallites with the FT 100, ect ..In the 706 group you will find, well,
> nothing. Nothing at all, little info at all.

Thats usually a good sign though. That means everyone are happy
campers and busy on the air...:)

> By the way please feel free to email me with any questions you might have with
> regards to the FT 100 and my side by side comparisions of the FT 100 and
> various models of the IC 706 rigs.

I am really curious to the differences, but want only unbiased
accurate reports.

I bought the 706g, but I'm not against the FT-100. I could have gone either way, but have been icom in the past with good luck, and decided to go that way again. The 706G is a bangup rig. If the ft-100 is as good as you say, it must be pretty good too. A friend of mine bought a ft-100 not too long ago, and he had a 706g also a few months ago, so I'll be able to get the true accurate lowdown from him as soon as he checks everything out. It's hard to tell from posts, cuz people tend to bias towards the brand they bought. I think there are a few plusses to the icom you didn't mention, but there are also plusses to the ft-100. I think the icom is built a bit heavier duty, and is rated 100% duty cycle. Correct me if I'm wrong, but the ft-100 is 50% duty cycle. I like the front stand on the 706, which the 100 doesn't have. I don't think anyway. There are some "birdie" problems etc on the 706, but overall it has one of the most sensitive rcvrs I've had here so far. "probably by design to be used mobile with small antennas" I would think the ft-100 gets a few birdies of it's own. Is it as sensitive overall? The plus side for the ft-100 is mainly a good bit wider general receive on the UHF bands. But, much of that doesn't mean much cuz a lot is UHF TV. The extra miltary air coverage is the biggest plus. And 800 mhz for non tracking stuff I guess. Also, a complaint about BOTH rigs....Why no 220 mhz???? They seem to ignore that band now. MK

Well, there's always:

http://bbcyber.com/signalone/

but that's a little pricey.

324. Groundwaves - use 'em

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 13:49:32 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <9i74oo$m7$2@neptunium.btinternet.com>
Source record: 57629

NOW AVAILABLE, Program "GRNDWAV3.exe"

Groundwave Propagation vs Distance, Type of Terrain & Frequency.

Although the computed results of this program are valid up to 30 MHz and above it will be of greatest use and of greatest accuracy from 2 MHz down to ELF. Radio amateurs working on 136 and 73 KHz will find it a useful guide on what received signal strengths to expect over very long groundpaths.

The relatively short ground paths above 7 MHz are seldom used except for cross-city rag-chewing. And in any case, depending on time of day and operating frequency, the groundwave may be swamped by very high-angle signals reflected from the ionosphere. But it should not be forgotten the groundwave is present at a very reliable and constant level for 24 hours of every day of the year.

During darkness, when the F-layer Critical Frequency is low, the HF groundwave is usually the only path available. Signals may not be strong but the signal-to-noise and signal-to-interference ratios above 14 MHz may be excellent even well beyond the radio horizon. At 14 MHz the radio horizon is about 20 miles.

(The radio horizon is not a true horizon. It is the distance at which the effects of Earth curvature begin to be felt. Up to the horizon the Earth can be considered to be flat. At 136 KHz the horizon is at about 100 miles.)

The program computes propagation loss between two, short (in terms of a wavelength), vertical antennas. Such antennas are the only type available at LF and VLF even to commercial operators. Relatively high efficiency is achieved only by using extensive ground-radial systems. However amateurs can get by with quite modest ground electrodes. Vertical antennas, highly efficient radiators at 21 and 28 MHz which put out very strong groundwaves, are very popular although they are mostly used as low angle radiators for long distance ionospheric contacts during daylight.

The greatest uncertainty in program input data will usually be in antenna efficiency. Actual efficiency on antennas much shorter than 1/4-wavelength is usually worse than expectations. Some guidance is given in the program's notes on estimating efficiency. For more accurate estimates use other programs.

TANT136 can be considered as a companion to this program. Amongst other things it calculates the efficiency of a simple vertical up to a height of 1/4-wave or a simple T antenna, both above a set of

buried ground radials.

If the performance of the ground system is known then program
TOPHAT1 will compute the efficiency of a top capacitance-loaded
vertical up to a height of 1/4-wave. For a simple vertical just set
the length of the top hat radial rods to zero.

This new program, GRNDWAV3, may be used in reverse to determine the
efficiency of any vertical antenna when both radiated power and the
field strength at a known distance have been measured by some
means. This is a standard procedure.

Download programs in a few seconds. Not zipped up. Run immediately.

334. FS:YAESU FT-530, FT-2500M, extras

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 16:09:05 UTC
From: xyz890 <xyz890@netzero.net>
Message-ID: <5vcekt839p3tsmu1jubtq0t2ki669gm4og@4ax.com>
Source record: 57638

I'm getting out of the hobby, I guess I was never really into it. I have 2 Yaesu transceiver's for sale, damn near new, antenna's, and power supply. I used them primarily for listening, I only actually talked on them a few times to get weather information from a local net. Here's what I have:

All radio's bought from: Ham Radio Toy Store, Inc.
117 West Wesley Street
Wheaton, IL 60187

Yaesu FT-530, 2M/440cm, expanded for MARS/CAP, 2 batteries/ 7.2V @ 1800mAh, 7.2V @ 600mAh, RS speaker/mic, wall charger, original box w/ packing materials & manuals.
$400

Yaesu FT-2500M, Heavy Duty 2M FM Transceiver, RF Output Power 50/25/5W, DTMF backlit mic, original box w/ packing materials & manuals.
$350

Hustler G6-270R base antenna, 2M/440, 102", 6dBd VHF/UHF, 100W
I have all parts and original packing.
$150

Diamond SG7900 mobile antenna
w/Diamond trunk lip mount (not the cheezee one)
original packing
$100

Larsen NMO 2/70 mobile antenna, magnet mount
$30

Pyramid PS52K power supply, 52amps, variable voltage, volt/amp meters
$200

I am willing to accept reasonable offers, but remember this stuff was never really used, so don't bother with stupid offer's. All item's are as is.

All item's shipped UPS COD or you pick them up.

mailto:xyz890@netzero.net
mailto:n9yim@aol.com

I recently moved so my address is not current with Call Books or FCC

335. Grundig YB400-PE vs. Yaesu FT-840 for SWL?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 16:21:38 UTC
From: tek_guy@hotmail.com
Message-ID: <cbf4a67d.0107070821.45e06f30@posting.google.com>
Source record: 57639
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

I'm thinking about getting a Yaesu FT-840 for ham use, but I also have a Grundig YB-400PE. I'm a little short on cash right now, so I want to know if it's a good idea to sell the Grundig, and get the FT-840. How is the SW, MW, and LW receiver sections of the FT-840? I like the YB-400PE and would rather not part with it, but if the Yaesu rig outperforms it, OK.

I have a seperate receiver I use for FM, so I'm not worried about losing that capability.

Any help would be, well, helpful.

73s,

Jim

336. 706 and odd offsets

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 16:40:23 UTC
From: Ed Culp <eculp@adelphia.net>
Message-ID: <3B473BB9.5BECFE14@adelphia.net>
Source record: 57640

I can't get my IC 706MKII G to accept a memory with an odd (1 Mhz) offset without changing all of the offsets in my stored memory locations!

If I change the offset to 1.00, ALL of them change in my memories, thus making them useless.

Anyone figure out how to overcome this problem? I called Icom and they suggested setting up a split, but that doesn't use the PL tone, and won't trigger the repeater.

BUMMER of a problem!

Any help appreciated!

>
>
>
>
Bob,
I can say that I might be one of the lucky ones but I have several friends who have also purchased FT 100's and they are all happy with thiers. The gentleman who got 3 bad ones out of the box could have had a couple of things wrong.
It have been the fact that he was already soured against the rig and he might have had a minor problem he didn't try to fix but rather blamed it on a bad rig rather then see if it was a another thing. I have done this myself on a couple of occasions with a piece of equipment that I thought was faulty and sent it back. I then recieved a like piece of equipment that had the same fault. I called and was nasty and generally an Asshole to the manager and the sales person who had sold me the equipment. I finally decided that it might be a problem on my end and started trouble shooting my station. In the end I found a bad ground. I called the guys back that I had been such a jerk to and apologized. The FT 100 is not a forgiving rig.
I did send my rig back to Yaesu for service before the warranty ran out (a procedure I would reccomend to anyone who has bought a new rig) for any updates including firmware that were then available. I was happy with the rig prior to sending it in but thought it was just a good idea to get a check up and make sure I stoped any problems that might be starting before things were going to cost me a pretty penny.
You see and hear so many things that might be wrong with the FT 100 and I can imagine that if you see the first sign of a problem that it easier to blame it on a faulty rig rather then chase down a problem that might be on your end.
The gentleman who got the 706 after 3 "bad" FT 100's did he mention that he had changed anything on his setup before buying the 706? Would he, do you think, admit that he had if so? Remember it is easier to blame a 'bad" rig then to admit you were wrong about a rig

Source record: 57645

Hey all, the wife and I are looking for radio gear. Cash isn't at an all time high, if you know what I mean. So, I'm willing to make someone an AWESOME deal, if you could use any CCTV gear. Maybe for surveillance, ATV use, whatever. That's what I do by trade, and I have about $12,000 worth of excess gear, ie. color cameras, b&w cameras, switcher, monitors, time-lapse vcr, etc. I'll trade it ALL for some radio gear. I could use just about everything. Would really like a nice base rig, but any is considered. The gear is just taking up space. I have LOTS of references, including over 90 Positives on ebay, and NO negatives. Please, make offers on what you have.

Take Care, Ken & Sallie

Sorry about re-posting this, but I hope someone who missed it before might respond.

Hello and Thanks in Advance. I am looking for a shop manual or alignment information for a Realistic DX-300 short wave Rx. I have the Owner's Manual including schematic. Tandy/Radio Shack has no manual available. My research with google showed that someone on this newsgroup listed a DX-300 with shop manual for sale in Feb. 1999 but he hasn't responded to my e-mail inquiry. Does anyone have a manual that they would be willing to duplicate? I will pay for copying and mailing.

Thanks from Ken, KO6NO.

Hi
I would ,without a doubt ,trade in the YB400 for your FT840. It doesn't even come close. It's like comparing a black and white tv to a new HDTV. I was just at this site http://www.yaesu.com/amateur/ft840tx.html and looking at the specifications. I see that in the basic , out of box version with no add-on's, it has what looks like one intermediate frequency filter with IF shift added on . It is a ham txcvr,with general coverage receive added on. If you want a narrower IF filter you have to get an optional filter put in ,same with a wide AM filter for SWBC. But IF filters aside,you are looking at a much better recieve section with more sensitivity, better strong signal handling,and better tuning for ssb. I think with a good antenna, you will hear a lot more stations on the shortwave side of radio than the YB400,as well as better MW hearing. Not to mention, when you get tired of chasing down fellow hams on the 40 meter band ,you can switch off the microphone and chase down Ethiopia on the 41 meter band.
YB400 is a good little portable ,but it's not going to hear nearly as well as that Yaesu.
Hope this helps
Chris

345. IC706 Mk11G mobile with LDG AT-11 - SWR

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 18:47:21 UTC
From: James Hall <nwtncc@iswt.com>
Message-ID: <B76CC3A0.4C10%nwtncc@iswt.com>
Source record: 57549

Hello:

I've installed the above into my Dodge RAM truck with a Diamond HV-7 antenna. After tuning the HV-7 to resonnance with a MFJ meter, the SWR readings on the IC706 were close but different. After adding the LDG AT-11MP the tuner shows easy matching to all bands (even when different coils were attached !). The IC706 showed infinite SWR when the tuner showed matched and it showed lower power output - the tuner said full power ! I switched the meter on the IC706 to ALC and ignored the rest. I've been making easy contacts without problem. Still, I hate seeing what I see on the Icom meter.

Can anybody help here ?

Jamie

For this price class, I would consider also the Icom 718 - it has a few more features (such as direct frequency entry - something sorely missed when using the 840).

I've had two 840's over the last few years and it's a very nice lower priced radio, but in my opinion, for about the same money, the 718 beats it hands down. Just reading specs on either radio won't tell you a lot, but in the side by side comparisons I've done here, the 718 comes out as the best radio for the money. I've sold the 840's.

Good luck with whatever you end up with...

John

347. Re: Which BOOM mic / headset?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-07 19:16:05 UTC
From: ham_guy@webtv.net
Message-ID: <18213-3B475FF5-138@storefull-131.iap.bryant.webtv.net>
Source record: 57552

Yes, you are right.... they are David Clark model H 7040. Guess I've been on the farm too long, working on that British David Brown tractor. (HI HI)
I sent an email to Mouser Electronics, asking them to recommend an appropriate matching transformer (thanks to Floyd) from their line of stock. If my arithmetic is correct (600 Ohms / 8 Ohms) would indicate that I would need to buy a 75:1 turns ratio, miniature transformer.
I'm considering putting together an adapter box that I could plug the headset into. The box would house the transformer and a PTT switch. I have some momentary push-button switches from Radio Shack, but noticed they aren't very good quality... the resistance is unstable and the contacts are flaky. I suppose I should get a decent switch from Mouser too. Next question is, how much current does a PTT switch carry? Also would 2.5 ounces of operating pressure be about right, do you think?
I already bought an extra mic cable from Ten Tec. It has 4 wires for their 4 pin plug. (Red, black, yellow and white) The white wiere has shielding around it. I would guess that the white, shielded wire is for the mic ouput and the shield would be connected to chassis ground? Gee, you wouldn't think a guy would get into so much trouble, just trying to plug in a headset, would you? Hi Hi. Thanks, Johnny W4XKE

For a "quick and dirty" amplifier, I'd check the hybrids listed in the front of the RF Parts catalog. They are also online with everything. It isn;t necessarily the least expensive way to go, but can't beat it for simplicity!

ignore
> that band now. MK

That is the single most important statement made so far about either rig.
WELL SAID! As for the FT-100, it will receive the 220 band fine in all
modes, you can even set a PL tone and repeater offset and save it to a
memory location. It just doesn't transmit !!!!

In looking at the specs for the output transistors, there is no reason they
couldn't transmit on 220 - in fact they would have higher output on 220
than the 440 piece. I'll bet the only thing lacking is a few bits of code
in the rig's firmware and maybe a choke, or coil or two. With my FT-920, it
was simply a matter of re-programming an EEPROM with updated microcode to
open up the rig's HF xmit.

I have been patiently waiting for some enterprising person to come up with
the mod to open the 220 band on the FT-100 (I have even heard rumors that
somebody has accomplished this feat) but so far I have found nothing
concrete. Whoever does figure this one out will surely become a wealthy
man - I'm sure that there are lots of FT-100 owners willing to spend a few
dollars for this improvement. Let's see, at $100.00 per rig x 50,000 (or
more) rigs.... >:)

WTB: Drake SW8, latest version, in PERFECT cond. Also have
to trade:

Sony 7600GR, manual, case, reel ant., box, two mos. old
Icom R2, unblocked, box, manual, one mo. old
Bearcat UBC-3000XLT, unblocked, beautiful case, ps, manual,
box, Watson W881 Super Gainer ant.
RS DX-398, case, no manual

Will consider trade combinations.
All in perfect cond. Hardly used at all!!!
DeWayne KE9K

356. KENWOOD TM-732 manual needed

>been on the farm too long, working on that British David Brown tractor.
>(HI HI)

Okay. I don't see that model listed on Clark's web site tho.

I'm really surprised that your radio won't run 600 ohm phones.

> I sent an email to Mouser Electronics, asking them to recommend an
>appropriate matching transformer (thanks to Floyd) from their line of
>stock. If my arithmetic is correct (600 Ohms / 8 Ohms) would indicate

That's the impedance ratio alright but the turns ratio should be about 9:1.
(8.67:1)

> I'm considering putting together an adapter box that I could plug the
>headset into. The box would house the transformer and a PTT switch. I
>have some momentary push-button switches from Radio Shack, but noticed

>too. Next question is, how much current does a PTT switch carry?

In most modern radios, the PTT circuit is nearly dry, i.e. very low current is
switched.

>Also
>would 2.5 ounces of operating pressure be about right, do you think?
> I already bought an extra mic cable from Ten Tec. It has 4 wires for
>their 4 pin plug. (Red, black, yellow and white) The white wiere has

>the mic ouput and the shield would be connected to chassis ground?

That is probably correct, but don't you have a schematic for the radio? Once
you get the headset/mike working correctly, why would you want PTT. VOX is a
dream, especially when the clacking relay noise is attenuated by the headset.

>Gee,
>you wouldn't think a guy would get into so much trouble, just trying to
>plug in a headset, would you? Hi Hi. Thanks, Johnny W4XKE

If your headset/mike is like mine, you have an amplified-dynamic microphone that
is going to require a DC current source and coupling/blocking capacitor. The
headphone matching problem is going to be the least of your worries. (Other
models have electret or straight dynamic mikes. You need to find this out too.)

However, the effort is well worth it. Before acquiring the Clark equipment I used Koss stereo phones and an Electro-Voice desk mike. I avoid "communications" stuff like the plague. I tried a Heil headset/mike for about five minutes and took it back to the dealer. The received audio distortion was pathetic. Listen to a few people using HC-4 and HC-5s and you should come to the same conclusion about the transmit side. (I can hear the howls of outrage right now from the users of Heil stuff. Their howls are full of distortion and they're splattering all over the band.) Distortion on receive is very tiring, especially after listening for hours to noise on the weak-signal modes like troposcatter and EME.

IMHO, frequency response should be shaped electronically, not mechanically. The Clark stuff is "lower-fi" than what I was using before but at least it has basically a flat frequency response that is not being tuned to someone else's idea of an "optimum" peaked response.

$80.00 Small Wonder Labs SW40+ 40 Meter Transciever + SWL Enclosure
+ SWL RIT unit + SWL FreqMite Frequency Counter. All Accurately
assembled and installed into the tranciever case. All My handiwork,
tuneup and testing was checked out by a fellow ham formerly employed
as a Kenwood Radio repairman on Quality Test gear. Excellent
Condition AND NEVER USED. I'm including all 4 manuals complete and a
generic power cord. Original price for all $132.00 How about a small
lightweight keyer to go with it?

$45.00 AEA CK-2 Contest Keyer : uses virtually any style key on any
transmitter. Powered off power supply, batteries, or cigarette
lighter. Programmable 1-99 wpm And has 10 memory settings 500
characters total with included battery backup. Yep a Beacon
Mode too for calling CQ while your monitoring and busy with something
else. Weighs in at 1lb 12oz for those backpack trips. Working AC-2
wall adapter included (you'll need to splice a plug on to fit into
the unit though) and DC-1 The cigarette lighter cord in good
condition.
All in Good Condition. Complete good quality photocopy of the manual
included. Wouldn't it be nice to have a key to go with this?

$50.00 Bencher Classic Paddle Key. Square Heavy Black base. Silver
Metal Hardware with Clear Triangle Paddles. Allen wrench for
adjusting.
Hooked up via sheilded cable and large phono plug included. Excellent
Condition. Want to operate this stuff a little better and build some
of
your own gear?

$20.00 W1FB Qrp Notebook originally $10.00
W1FB Design NoteBook originally $10.00
W1FB Antenna NoteBook originally $8.00

Finally... be able to use practically any type of antenna with
this ATU:

$45.00 Emtech ZM-2 Z Match Antenna Tuner assembled and tested
Excellent condition
tunes 3.5 - 11mhz and 12-30 mhz 15 watts max. Sharp built in
Visual SWR meter
tunes coax fed or Balanced Line antennas. Clearly Labeled. I'm also
including a GAP
Antenna Radial Set (weather proof 25ft wires) with this.

All Sales Final. All sold AS IS!! I'm moving to operating in
other modes and appreciate your hard earned funds helping me do this.
I
have been a Ham for 6+ years And I refuse to offer this Gear on Ebay.
You will find no previous sales history good or bad on the net. I

Check out my site for various equipment and software reviews. Mosts recent is the Elecraft K1.

You can advertise surplus gear at www.qsl.net/g3cwi for free. Check out The Amazing Online Flea Market. There is lots to look at there including articles on antennas, equipment and software reviews. Nearly 90 pages of information.

I have a Kenwood TS 520S with the MC-50 desk mic. I am also including a 300 watt dry dummy load.

The radio is cosmetically an 8+, with only some loose thread on the handle. It's functionally a 10, with good finals and drivers.

I am asking $400 for the rig, mic, and load.. but am also looking for SSB filters for my new Yaesu FT-847, so would be open to a trade for those. Will pay shipping to any place in the US.

Hi Ed,
I just set my 706MKII to split mode, made vfo A the receive freq and vfo B the transmit freq. I then set a PL tone on vfo B and activated it by the TON control on menu M4. Works good. My transmit freq is 1 MHz away with PL.

I wouldn't think the G model would work any differently??

As far as I'm concerned, the owner of the web site is a modern Chicken Little, running around shouting that "the sky is falling."

What has really happened is that Windows XP's TCP stack has been brought into congruence with most versions of Unix, with OS X, and even with some versions of MacOS: The user can fill in the fields of IP packets before they are transmitted. Yes, that allows "spoofing", but it has always been possible for most other OSes. The web site mumbles something about DOS or DDOS attacks, but the perps of DDOS attacks don't care about spoofing anyway since they're not using their own machines. So what if the packets get traced? Spoofers have plenty more compromised "zombie" Windows machines where those came from, and getting the owner of a zombie in trouble seems like icing on the cake.

The problem isn't Windows XP -- it's Windows in general. Badly configured "out of the box", Windows 95/98 machines are easily taken over and turned into zombies by means of several well-known security holes. If you go to to http://www.sdesign.com/securitytest with your Windows or Linux or Mac box and pass their checks, you will be among a tiny minority of users who can do so. In fact, that's what you ought to be doing first -- not worrying about Windows XP!

UseNet Policy

eBay users may not post on Usenet groups (Internet newsgroups) to
advertise eBay or an eBay
listing that is inappropriate or violates the Usenet board policy. If
Usenet abuse is reported to eBay,
we may among other remedies) remove the listing, issue a warning,
temporarily suspend or
indefinitely suspend the offender's eBay account.

We have no tolerance for UseNet abuse and will take action as
appropriate. Please note that we
can only take action in cases where it is clear that an eBay member has
posted to the Usenet
inappropriately.

Usenet abuse should also be reported to your ISP (Internet Service
Provider) and the email
provider of the person posting on the Usenet. Both of these
organizations are in a much better
position to prevent future Usenet abuse. Generally, you can send email
to abuse@"ISP".com to
properly report perceived violations.

Oh no, people that want to play the part of usenet police again. It absolutely amazes me that no one tries to stop the foul ranting and raving and personal attacks that appear constantly on the ham radio newsgroups. But some respectful operator comes along and post a notice about a sale or auction of ham equipment, which is in many instances is of interest to other hams, and the ham usenet police come down on her or him like a ton of bricks. How petty can some people be? Who really cares if the post are not following every little rule to the T? Get a life folks.

Source record: 57591

I don't get it, you have no idea what the policy means by inappropriate use, but you feel the need to let everyone know ebay's policy. Posting auctions of ham radio equipment to ham radio newsgroups seem to be very APPROPRIATE. Enough badgering of your fellow hams. If you don't want to read auction posts, then don't or use the filter on your newreader. As for me I appreciate them and find it very beneficial.

387. Anyone have the pinout for a Harris RF-901A phone patch?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-08 15:16:54 UTC
From: Web Williams <kr4NOwm@SPsc.AMrr.com>
Message-ID: <MPG.15b243887b0912159896ed@news-server.sc.rr.com>
Source record: 57592

I'm glad I'm not holding my breath- an e-mail to Harris
has gone unanswered for a couple of weeks. I just need to
know three basic connections for pins 1 through 11.

TX relay close (?, I assume this is how it works?)

RX audio in from radio speaker or audio out jack on rear of radio

TX audio out to microphone connection or audio in jack on rear of radio

There are red and green wires attached to where I assume
the phone wire connects, so I don't need that info. I
know where the positive voltage and ground go too.

If anyone has a manual that they can scan the page that
contains the connection information, it would be most
appreciated.

Thanks, -Web Williams in Myrtle Beach, SC

Please remove the capital letters in my e-mail address to reply!
This combination really seems to fool the 'bots!

Hi!
I am looking for more info on the display lamp of ICOM IC-728 transceiver.
One of the 3 lamps on my 728 blew up, apparently, so I would like to change
it myself.

It is a 12V lamp, or at least that's the voltage the lamp is powered with
:). Does any of you know corrent/power rating of the lamp, or where I can
lookup some more info? I doubt ICOM service would tell me the info I'm
looking for... :-)

Bob,

Ebay is not posting so it is not an ebay ad. It is the individual amateur radio operator posting that their equipment is up for sale and the sale is being conducted through ebay. It's ham radio equipment being offered for sale. I just do not understand what peoples' hangups are with this. Just ebay bashing and punishing the amateur as a way to "get back at them"? Why people get so upset of auction or for sale postings is beyond me. Ham radio is about communication among other things. Let people communicate.

Bob,

When you say "they" in the context of newsgroups, who are "they"? I have never seen a survey conducted in any of the 30+ newsgroups that I read that asks me what are appropriate postings. Many of the ham radio newsgroups were around before ebay was even started. So it is inconceivable that some mysterious policy on ebay postings was placed in the FAQ when the newsgroup(s) started. Seems to me all the users should decide, not just one individual.

Again, MHO

No, I do not have one. However, it is probably a varactor multiplier. It's certainly a highly NON-linear multiplier and suited only for FM and CW. The multiplication efficiency is probably around 33%.

So Bob. In those 25 newsgroups do read EVERY post online?

Also you would rather spend the time on these 25 newsgroups sending
complaints about what BOB doesn't like rather than take a few seconds
with FreeAgent and set up a filter to eliminate from your eyes ALL FA
posts?

Oh...I see what you are now.

Dave,

Use a filter. Then you don't have to wade through them. It's is so easy.

I don't want to read rantings on CW or tube gear, but I don't push a new policy of no CW or tube gear postings. FA posts help get the word out to potentially interested parties that certain equipment that they may be interested in is being offered for auction. Kind of like you auctioneers advertise in the newspaper about upcoming auctions.

Cheers,

Duffy

Charlie...

There are a lot of decent inexpensive ham rigs made by SGS,
TenTec, Electrokit, etc. that will beat the RCI hands down.

They will also hold their resale value far longer. I paid peanuts
for my RCI-2950 used. Less than 100 bucks, and I got what I
paid for at that price.

Regards

Peter

You know, I feel that most people wouldn't bitch about eBay listings if the folks that post the ad would simply use FA in the subject line.

IMO, I think most of this crap started when people started advertising equipment forsale when it was really an eBay ad. I personally don't have anything against eBay, but when I see a radio listed like this: "FS Motorola HT1000" I think, "Hey, I could use another one" so I click the link only to see a link to eBay. There's been a lot of replies about using filters and that's a fine idea...

IF PEOPLE WOULD USE FA IN THE SUBJECT LINE!!!

Steppin' down from the soapbox...

Most guys on the bands don't know how to give a signal quality report.
I heard someone say recently to an SSB operator, "You need to turn up
your gain, you aren't modulating 100%" !!!!!!!! In other words,
they EXPECT you to be driving the finals into compression, with fan
noise in the background, etc. Just tune the 20 meter band sometime
(14,178 excepted) and see what I mean.

I had a fascinating CW QSO a few months back. Op running old Collins
Gold Dust twins asked me if he had key clicks. I told him to test a
bit and I'd tune around and see. He immediately knew he had someone
who he could get an honest report from, because you don't hear key
clicks on frequency. Yes, he was clicky, for 25 Kc (we have to say
Kc, it was 1958 equipment !). He told me he got good reports
sometimes when he suspected a problem, and was trying to troubleshoot
the cause. So he turned some things off and disconnected others (a
linear,) and I continued to listen. Suddenly we found it - as I
recall it was a keying relay in a keyer. He was thrilled to finally
find out what it was. Good signal reports from well meaning operators
(or ops who don't know what key clicks ARE) didn't help this guy out.

Bottom line - on the air signal reports are meaningless unless you
know who you are talking to. 5-9 could mean 2-3, clean audio could
mean mush. And on the other hand, I've told VHF ops in a contest that
they were 50 KHz wide and been told that my receiver was being
overloaded.......
yeah, right, sure it is !

It's no big deal - any decent firewall will protect an internet client machine from being affected - and if you run an internet web server you can easily protect your server, but there is not a lot you can do to prevent a "denial of service" attack to your ISP connection.

In order to exploit the XP raw socket issue - or conduct any type of malicious activity - a hacker has to be able to obtain access to your machine first.

The only ones who will be affected by the TCPIP protocol layer in XP will be the "computer illiterate", and these types will be open to cyber attack regardless of which OS they run - most of them already allow easy NetBios access to their machines from the web and they don't even know it...

This is the criteria I use to Inform people when they are off topic
by posting ads about ebay. I think it is fair, the Liars do NOT..

"If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line"

Don't you think this is fair???

I do and I live by it...

Just my opinion..

Bob

407. Re: Anybody Know How To Fix This???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-08 20:07:29 UTC
From: ricknj10@hotmail.com
Message-ID: <3b48b9b7.188521764@news.eclipse.net>
Source record: 57510

There are a lot of well meaning comments posted here, and
congratulations to all involved that this thread has remained focused.

My suggestion is to do some analysis, though, before suggesting cures.
For example, let's assume any of the following COULD be the culprit
and I'll assign a probability value to each (1=least likely):

- overload of the front end of the tv, cable box, or vcr (5)
- leakage in the coax cable from the cable company (5)
- bad splitter somewhere in the interferees house (8, if there is one)
- signal coming in on the AC line (9)
- harmonics from the ham tx (2)
- bad antenna practices at transmitting station, grounds,
rectification (1-10 ?)

I'd suggest first, unplug the cable from the cable company and see if
the interference exists! If so its an AC line thing. Presto !
Then eliminate the accessories (vcr, cable box) by plugging cable
directly into TV and see if it is still there..... etc.

In other words, do some analysis before trying solutions. You might
get to the problem faster, save money, etc.

See? I say this because these days it seems technicians (car repair,
appliance repair, PC troubleshooting !!!) would rather just replace
things rather than use their brains and diagnostic tools available to
them. I have spent 4 hours recently on the phone with HP regarding a
PC problem. They had me reload software, reformat hard disk, etc.
Never once did any of 4 techs ever say "Lets go look at the log files
and see what the error messages say."

>antennas attached, and receive say on the same band, but one Rx on one
>ant, and one Rx on the other ?
>
>And can you select which one to Tx on easily ?
>

No, the same antenna feeds both receivers. And one band only, except mine seems to work 80 and 160, but no other dual band combinations. There is an A-B antenna switch, so you can have, say, a dipole and a yagi but only one is in use at a time. And the memories remember the correct one, so when you go to a 20 meter memory it will select the B antenna where you have your yagi, if you had set the antenna switch to B when you programmed the memory.

Also there is a separate receive antenna port (for a beverage, for example).

Does that answer the question?

I agree about the HC-4 and HC-5 cartridges -- really unpleasant to listen to, and I doubt the "DX" cartridge in the pair would improve intelligibility in difficult conditions. Heil does have a "gold line" that may be better.

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* MFJ 1278B TNC Adapter Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1275.00 plus shipping from 97006

Thanks,
Rick

414. FT-50 to TNC plugs?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-09 00:45:36 UTC
From: Stephen D Lindner <intelF@mediaFone.net>
Message-ID: <5quhkt8ai31jfhtkr06iuk60baeutamn93@4ax.com>
Source record: 57518

The instruction book for an FT-50R shows in the back how to plug it into a TNC. This is remarkable because Yaesu doesn't sell the plug (alone) used in the instructions. Its a very non-standard animal, a 4 conductor (!) mini-phone plug, about 3/16" diameter.

I thought I'd be clever and buy Yaesu's plug adapter 4-cond mini male phono plug to 3 conductor mini female adapter (other end looks like a stereo mini-plug) that is used to progam the FT-50R from your computer. So I plugged a standard stereo male into it and discovered that the 4th conductor is the one you need to go to the TNC. And its not on the stereo mini!?!

The Yaesu plug is plastic cast and sealed. Does anyone know who sells such a 4 conductor mini-plug alone? Failing that, does anyone know which Yaesu product I need to buy and hack up to get such a plug? Failing that, do I laugh or cry?

Remove the F's from my email address to respond direct

420. Looking for opinions on the IC-T81A Quad bander from ICOM. Considering this for my 1st radio purchase.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-09 02:17:46 UTC
From: Ray Hebert <ray.hebert@usa.net>
Message-ID: <9ib48c$d2t$1@iac5.navix.net>
Source record: 57526

Looking for opinions on the IC-T81A Quad bander from ICOM. Considering this for my 1st radio purchase. I want to make sure I have a HT that is durable, dependable, versatile, and economical. Also I want to make sure the power supply is readily replenish-able during emergency operations (i.e.- AA rechargeable batteries). I want to make sure that the vendor is still selling the model so I can get parts, accessories, and repairs when needed. Finally, I want my first rig to be something I can be proud to own.

I will be testing for my Technician's license on July 14th. I have been contemplating this all important purchase of my 1st radio. I would also appreciate any opinions on a good starter RIG. Perhaps this ICOM is not the best value for my needs. I have also been looking at the Yaesu VX-5R. Impressive HT but the ICOM Quad bander may be a better value due to the additional band. Alinco has some great prices for their rigs. I am just now becoming familiar with their brand. I have not formed an opinion as to the quality of Alinco products.

Also, I had been looking at the Realistic HTX-202 systems out on eBay. Good price but older and only covers 1 band. Plus the price tag of the HTX-202 systems on eBay were outrageous. For just a few dollars more I could buy a brand new 2 meter HT rig from Alinco with a warranty, etc. Just did not add up to me.

I see my interests in ARES / RACES, Skywarn, 2 meter work, and QRP CW (in a few months once I pass my CW exam). I also want to be as mobile as possible in order to assist with Emergency communications when called upon.

Thanks in advance for your help and insight,
Ray Hebert, Future Amateur Radio Operator come 7/14

I recently found one of these at a local electronics shop (You-Do-It
in Needham, MA if you are local). It physically fits just fine, and is
a match for the speaker mike cord. Looks to be some tricky soldering
involved for some of the 4 connectors.

It is made by a company called Calrad.

See at their website: http://www.calrad.com/calrad/cat-59page2.html

Look at parts

30-701 (4 CONDUCTOR 3.5mm PLUG)
30-702 (4 CONDUCTOR 3.5mm RIGHT ANGLE PLUG)
30-700A (4 CONDUCTOR 3.5mm CHASSIS JACK)

There may be other makers, but this is the one I found. The special
connector is apparently used on some newer DVD players and camcorders.

HTH,
Happy trails,
Gary

Source record: 57528

Hi Ed,

I have the first 706 and I can put a 1 mhz offset in no problem. I just it up in split mode then store it to memory. It does not affect any of the other memories.

Mine also has a quick split feature. As long as you are not in FM (as FM uses your repeater offset feature) you can simply go to what ever frequency in the single VFO mode, hold the split button down for a couple seconds and it will automatically set your split offset and second VFO according to your set up features that you set when you power up the rig and hold down the lock button.

Hope this helps.

Bill

Your separation will not be 45KHz, but 555KHz. You will need a duplexer
that has its notch filter set for 146.160MHz; this will provide the required
attenuation of the transmitter. You won't have the physical isolation of a
remote location, but it is worth a try.

That number is a JFET! (cf. the common BF244 BF245 family). What does
it do -- is it the RF amp or local oscillator. That family commonly seems
used for both. I can check my FET databook this evening if you want
parameters.

433. TAPR TrakBox for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-09 10:32:08 UTC
From: "Alan P. Biddle" <WA4SCA@AMSAT.ORG>
Message-ID: <7v1jktch6ed4kgt9uc6sgfm9sndoihmbo3@4ax.com>
Source record: 57537

Hi,

I have been housecleaning, and have a TAPR TrakBox for sale. It is a semi-kit. The PC board is fully populated and tested with the latest 3.50D TrakBox II firmware and CPU. (I have another one, and just swapped out the connectors.) It includes all the stuff which came with it: ribbon connectors, LCD display, BDC switch for manual satellite selection, misc odd hardware, etc. In addition are a metal box, untouched, and a small DC to 100V converter to power the back light in the LCD. Construction and firmware documentation included on a floppy.

Not included are a power supply, assorted toggle or push button switches for the front panel, connectors for the back panel, optional LEDs, miscellaneous mounting hardware such as standoffs, a few nuts and bolts, miscellaneous bits of wire, etc. In short the usual caseless TAPR bare bones approach. Nothing you can't get at Radio Shack or probably have in your junk box. Most of these things you would need to customize anyway to match you radios, rotator, etc.

You probably need a bit of building experience, but not much. There firmware has evolved considerably over the years since the construction documentation was written, and there are some minor changes which may effect the hardware. For instance, the "mic click" frequency control is no longer supported. Also, there really isn't anybody supporting it these days except for JA6FTL, the firmware guy, who still does periodic firmware updates. You can figure it out by wading through the release notes, and I will help with any questions I can.

$225 OBE shipped CONUS.

Hi N7KN,

The RCI-2950 is a mobile while the RCI-2985 is a base. It does indeed
have the appearance of being able to be "rack mounted." I wouldn't try
it though as I believe the frame is merely for aesthetic purposes with
little structural strength. (Not to mention that I personally don't
like the RCI line of radios.) Hope that helps. Take it easy.

436. Re: Repeater freq near receiver freq?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-09 12:23:03 UTC
From: rshprd <ka9flx@arrl.net>
Message-ID: <Hmh27.119925$mG4.59678913@news1.mntp1.il.home.com>
Source record: 57540

Pete,

Shawn Stated:
****
"The site has a repeater on 146.760, 100 watts or so.. we have a special receiver that would (theoretically) work well at this site due to its height and location, but I fear there may be a problem. Our receiver is on 146.715."

146.7600 TX - 147.715 RX = 0.045 MHz or 45KHz Separation between TX and RX.
****
Assuming Shawn has stated the problem correctly (TX/RX assignments), that would place his system transmitter at 146.1150 MHz (clearly an oddball, inverted split).

However, I would agree it appears at least, that Shawn actually (hopefully) has his numbers backwards and that his system TX is actually 146.7150 MHz and RX at 146.1150 MHz, which is as you stated, not really a problem. This is because he would then have 0.645 MHz or 645 KHz between his RX 146.115 MHz and their TX at 146.7600 MHz.

The problem "as stated", is a bad one with only 45 KHz between TX and RX.

Source record: 57542

I don't mind FA posts as long as they are identified as such and as long as they give added value. When I'm crusing the newsgroups, I don't want to exit to ebay if I find something I might be interested in. If I click on the item and only find a link to eBay with no description I skip it. If I find some descriptive information and it interests me, I may then go and bid. I'm sure that I'm not alone, so the message to the auctioneers is MARKET your product in the newsgroup as you do in eBay. A copy and paste is only a couple of key strokes to increase your potential buyers.

Message-ID: <2rBJO2q4pLn0u0wP55wcz6RGWzY+@4ax.com>
Source record: 57543

Murray Neece <RadioRanch@qth.com> wrote:

>How can I find the marine frequencies that my apply to ham rigs , have a
>man who wants to talk ship to shore one HF marine and wants me to help
>him find a radio...anybody know what they are? Thanks 73 Murray

Transmit:
1.6 - 2.9999 MHz
4.0 - 4.9999 MHz
6.0 - 6.9999 MHz
8.0 - 8.9999 MHz
12.0 - 13.9999 MHz
16.0 - 17.9999 MHz
18.0 - 19.9999 MHz
22.0 - 22.9999 MHz
25.0 - 27.50000 MHz
Mode: USB. AM, CW, FSK, AFSK

Murry, the above frequencies were pasted from the Icom web site for one of their marine radios. You might just look at the specs on the various models. Perhaps others can be more specific -- the above looks pretty broad to me.

Some people just can't read. the ebay thing says....

eBay users may not post on Usenet groups (Internet newsgroups) to
advertise eBay or an eBay listing that is "inappropriate or violates the
Usenet board policy"

In this case IT DOEN NOT since it does violate the Usegroup policy.
Good grief...

Source record: 57547

Sorry,
The rest of the number are correct, but it is
146.7600 TX - 146.715 RX = 0.045 MHz or 45KHz Separation between TX and RX.
Minor typo, but big math problem. :-)
Calculation is correct with the right numbers.

445. Re: FT-920 or IC-746, receive performance?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-09 16:11:23 UTC
From: GW <kc2gkl@arrl.net>
Message-ID: <LIk27.1367$767.159559@newsread2.prod.itd.earthlink.net>
Source record: 57398

Miles,

You may want to check out this excellent review:
http://www.wm7d.net/hamradio/ft920/comments/swlreview.html

What many have NOT said here is that the FT-920 comes already
fitted with a digital voice recorder, which IMO, is an invaluable tool
for helping to replay a station ID. Certainly beats having a tape recorder
nearby! When fitted with the optional AM filter, the FT-920 stacks up quite
well and when using it in the ECSS mode it's almost like having selectable
synchronous detection. The Dual watch is another nifty added bonus, and
the RX audio quality is simply fabulous when an external speaker is used.

When it comes down to transmit audio quality, the FT-920/MD-100
combo can't be beat, in my opinion. The NR also works beautifully in
helping to reduce noise, but the DSP is only so-so, and is a bit over
rated. I personally feel that the FT-920 has many excellent features for
the money, including alpha tags, dual watch, selectable attenuator, IPO,
variable RF gain, which are all useful tools for the SWDXer.

Anyay, good luck in your decision!

Then that is the real concern. That so many
computer newbies are eazy zombies.

One would tend to think that it would be absurd to spend
so much time fooling around with such things when they
could spend less time making a million dollars honestly.
But there really are people out there with lots of time
on their hands (and doting mommies) that think it would be
real "kewl" to crash a plane, or blow up a building, or deny
service to thousands by tying up systems.

If you threw them all in prison and give them playstations,
they would probably be very happy.

>>
It's a low (A) general purpose audio device. PnP (Silicon)
I can post the spec, if you haven't already received it by the time
this posting appears. If it's just package lead-out you want. The
lead-out is
B
C
E

(that's with the flat side of the package towards left and looking at
the leads)

Looking at the spec. There is nothing special/critical about it so
you've got a very wide choice of replacements which will work in
whatever circuit it's out of.

448. Re: Check Out New Radio: RCI-2985DX

I guess I did something that pissed Geocities off. They closed the account
I was using.
I threw it up here, http://www.ptinet.net/~n7kn/ajax/pr9202.pdf
1.72 Megs, requires Adobe Acrobat reader.

Regarding Bert's post: I realize that the 2985 is a base. I believe it is
also designed to cover 10, 11 and 12 meters while the 2950 covers 10 and 11.
I'm sure you will find (once you take the screws out of it) that it is a
very similar design to the 2950. The article I'm trying to present was
written by very objective experts. It really punches some holes in some of
the opinions the RCI fans hold.
I belive the bottom line is if you are considering shelling out $500 you
would get more features, more power, more frequency coverage, better
rejection of unwanted signals, etc... with a used Kenwood/Yaesu/Icom.
BTW, the HR 2510 got a much better review.

Source record: 57404
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.swap,rec.radio.amateur.equipment

I'm selling a Grundig YB-400 PE communications receiver in very good condition. It has some normal use wear marks on the top part of the cabinet, but nothing that is obvious or noticeable. It comes with accessories; Koss earphones (better than the Grundig ones that came with it), 23 foot reel antenna for improved shortwave reception, and an AC adapter.

I'll sell it with all accessories for $140 shipped to any location in the CONUS, AK extra. I'd like payment in a postal money order...no checks.

It works excellent; I've been able to tune the major international broadcasters, plus a pirate or two...it also has great SSB detection for hams. I'm selling it because I'm getting a FT-840 and I'm low on cash, so the Grundig has to go. Too bad, because it's a great portable.

If you're interested, email me at tek_guy@hotmail.com

73s,

Jim

forsale:

I have 2 ICOM FT40-LT portable radios in great
shape. Batteries hold almost 100%. they
radios are 99 channels.
8 channels dtmf codes
ctcss and dtcs codes
text can be programmed for each channel

these are UHF models
they have VOX option for handsfree
they have 3 levels of power output

300.00US each includes insured shipping with
tracking number. a pair for 550.00 which includes software.

includes programming manual
they come with new beltclips, new antennas,
nice leather holsters.

thanks
Offers are always considered

Since people have been talking about this radio covering 26-28 mHz,
maybe this will help clarify things.

-Aaron-

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

I'm thinking about getting a FT-840....and like my other rig, a VX-5R, I want to know if it can be modified. I know about the general TX modification for 1.8-30 mHz continous TX, but I haven't seen any other mods for it.

Are there other ways to modify a FT-840?

Thanks.

455. Noise from LCD Monitor

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-09 22:02:05 UTC
From: Steve <swoodwar@fix.net>
Message-ID: <3bakkt4r2tsvgahvf4cah7k81om6dqdfto@4ax.com>
Source record: 57409

Just got my HF rig up and running and the noise generated by my LCD flat screen computer monitor wipes out the receiver. Is coming in via antenna. Tried some chokes on monitor, no luck. Turn it off and radio quiet. Looking for suggestions, anyone else resolved this problem? Thanks! Steve swoodwar@fix.net

Try changing screen resolution if you can - sometimes that will move the offending frequencies. You may have to just move the monitor quite some distance from the radio. Or try remote control of the radio from the computer - same result: distance between computer/monitor and radio.

It's not "everybody else" that's wrong, just you, with your obviously warped world view. It would appear that you are one of those who, under the rationalization of "liberty" and "freedom," would claim unlimited private rights to limited public resources. Transmit all you want, on any frequency you want, just don't allow it to enter MY airspace, asshole.

Here's the problem & what I have changed & checked...
Unit receives & shows signal, I can faintly here a tone when injected
with signal generator, but there is no volume adjustment.
I have checked the following and all are in working order...
Replaced audio amp, replaced volume switch, checked speaker and wires,
Also have the same results when using an external speaker.
This is the odd part..
When roger beep is enabled, I can hear it and adjust the loudness of
the tone as heard through my internal speaker with the volume control.
I don't recall being able to hear the roger beep prior to this volume
problem.
If you have any serious solutions or can help me out, please contact
me direct at...
tramd300@goingplatinum.com

Thank you in advance...

Not at all, sir. I am merely responding to posters within this thread
with some very relevant information. These are your country's laws,
sir. Why should the publishing of them in a public forum disturb you
so much?

>Last time I checked this was AMERICA.

It still is. And if you don't like the FCC laws here, you have a
choice. You can work to change them, or you can leave. There's no
valid excuse for being an outlaw.

Try changing the screen refresh rate. If that fails, try a different brand
of display panel. The NEC's work fine setting right next to my HF rig.

Thanks for the product review repost. You know, I've been reading QST and its product reviews since 1979, and I don't think I've ever seen them make so blatant a negative comment: "positively terrible?" Wow! The ARRL usually tries to be fair and not "slam" a product. It seems they're trying to tell us that this radio is one book you definitely CAN read by the cover!!!

BTW, my hometown doesn't have a ham store and I have to visit a (gulp) CB shop to get my cable, connectors, etc. -- actually they have a pretty good selection and quality stuff, but the prices are kind of high. Well, this place (called "Mobile Music" and located in an old gas station) not only sells the entire Ranger line, including that huge, rack-mount CB whose innards I'm sure are mostly air, but also the full Astatic line, the entire MFJ line and -- get this -- Ameritron amplifiers, proudly on display along with the Cobra CBs and the Sadelta Echo-Master mikes! Hmmmm ....

I was surprised, too. I'm going to have to read the article over again to see if they said anything good about that radio. I think it was the split operation for 10 meter repeaters (try finding a tone squelch board for an RCI, all the ads say they're available).

The nearest store to me is in Seattle (40 miles away, Radio Depot). I usually just order from HRO in Portland. The gas savings and sales tax savings far offsets the cost of shipping. Sometime you can even weasel your way out of the shipping cost.
Ameritron amps in a CB shop? I don't think Radio Depot even stocks them. Too much overhead.

481. hallicrafter S 40

hi,
A friend brought over an old hallicrafter s 40 receiver and I would like to hook it up to see if it works. it has been sitting in a dry basement for many years and has not been powered up for who knows how long. any precautions i should take? what can i use for an antenna? Any advise would be appreciated. thanks john

482. FT-757GXII tuning problem

PLEASE HELP! My radio has a very fatiguing, stairstep tuning feel-- not the smooth analog feel it should have when tuning up and down. It's like the tuning resolution is only 50Hz, instead of 1 Hz. This radio was sent to Yaesu several years ago because the 2nd LO went out. It has been like this ever since I received it back from Yaesu, but never did anything about it! Anyone familiar with these LO circuits in this radio? Also, the FM mode doesn't work-- no white noise on RX, very quite. Any help would be appreciated...
Thanks,
Prentice, N4VBH

Interesting, you are basing all of this on a 9 year old article about a radio that is discontinued, no longer manufactured and replaced by a newer, much improved model. The new RCI radios are totally different. They are now surface mount component construction, perform much better. Remember the first Japanese cars? Look at them now!

When you find an un-biased article that is really about the radio we have been discussing, please post a link to it and we will all look at it. This is ancient information and does not describe any current Ranger product.

Good questions! Find a Variac (variable voltage transformer) and ease the voltage up slowly. Mine has an ampmeter built in, so I can watch for unusually high currents (indicative of a bad cap/failed xformer/short circuit). I normally bring a unit up over about 10 minutes; a friend brings the voltage up to about 40%, takes it back down to 20%, then up to around 50-60%, back down, etc. NEVER just plug one in to AC (unless you LIKE smoke <<grin>>) and I don't run them at 100% voltage (I normally stop around 90%).

A piece of wire will suffice for the antenna. My Drake 2B has run for years off of a piece of 14 ga. wire run up thru the attic and over the rafters.

I'm sure that many others will chime in with excellent ideas; you many also want to try the boatanchors newgroup.

Andrew

I am selling my GPS.
I have a Garmin GPS III Plus in EXCELLENT condition.

I am including the following accessories that I purchased with the
GPS:

PC Data Cable (I think this came in the Box)
Cigarette Lighter plug power cable.
Remote mount antenna.
Mapsource US Roads & Recreation.
Garmin carrying case.

I paid $600 for all of the above and I need to sell ASAP!

$200 .

Anybody know where I can get a belt case or holster for the Kenwood TH-D7A? Preferably something that will allow the speaker/mic to stay on while it is in the case.

Doesn't have to be anything fancy, I've just torn the heck out of the belt clip mounts on the battery by letting it seat-belt-slingshot off of me while getting in the car, and I'd prefer something of a little more durable design.

Incidentally, anybody have any recommendations as far as extra batteries? How's the performance of the pack that adapts it to AAs?

I strongly suggest that you carefully inspect the condition of the AC line cord. Those old rubber or vinyl cords tend to fray and crack over the years, presenting a LETHAL shock hazard. If the cord is damaged, replace it.

Also, be sure to connect the set's chassis to a good ground, for safety reasons. A lot of those old sets had a hot chassis!

As Andrew mentioned, bringing up the set on a Variac is a very good idea. And, a piece of wire should work fine for casual listening, and to verify that the set actually works.

If the radio has been dormant for many years, I would advise that you inspect the power supply filter electrolytic capacitors, if there is any salty looking substance on them at all, replace them before turning on the power. If there is none of this substance, it doesn't necessarily indicate that they are good... could (and most likely have) have lost their polarity over time...

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

Icom IC-781 HF Transceiver, 160-10, 150 watts output for sale. This super-deluxe radio is the ultimate top-of-the-line HF rig. All filters included from the factory.
The IC 781 was the first to have a spectrum display, dual receive, and 150 watts out.

This package includes the SM-8 mike (will operate two radios at once). SP20 external speaker, and CT17 level converter for computer control.

Radio is in good condition and comes with all cables and the original manual.

Asking $3,450.00 for the complete station. Price is negotiable.

Please contact Rich W6VX here or at 818/997-1217. (Los Angeles area)

Best 73 and good hamming!

497. Low 6m receive on IC706

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-11 00:02:20 UTC
From: ve3tmt <ve3tmt@rac.ca>
Message-ID: <CIM27.19200$RX6.1606677@news20.bellglobal.com>
Source record: 57451

The 6m receive on my ICOM 706 seems to be much lower than all the other bands. For example, when I tune from 29.999.99 to 30.000.00 Mhz the relay clicks for the 6m band and the receive noise just drops right off. When I tune from 59.999.99 to 60.000.00 the relay clicks again and the background noise comes back. The 6m noise doesn't disappear altogether, but does drop off quite noticeably. I'm wondering if I have some bad component on the filter board. I have heard of diodes that need replacing??

Please reply direct as I don't check the board too often.

Message-ID: <3B4BA395.CF849E5F@bellsouth.net>
Source record: 57452

Hi, Brenda. I have owned my 847 for nearly 2 years. Overall, I am very pleased with the radio. On HF, it is no FT1000D or even a Mark V, but I didn't expect it to be. I have mine sitting next to an Icom IC-735 mid-tier HF radio and the comparisons on both transmit and recieve are very close. For VHF and UHF, I have found it to be an excellent performer. I haven't tried it on the "birds" yet. But a friend of also has one and works satellites fairly frequently. He says it works very well for that.

There are some minor design flaws that everyone keeps dwelling on (volume control, auto-tuner/computer control port conflict, low headset drive, lack of vox operation) but all of those can be worked around. Some of us that have been in ham radio for a long time (22 years here) tend to nit pick sometimes.

Enjoy your new radio. The only thing I would advise is, if you haven't already purchased the FC-20 auto-tuner, don't. Its capabilities are very limited. You are better off with a good after-market auto or manual tuner.

73,

Mike

How can the Yaesu FT-840 be computer controlled? I have a spare Dell XPi 120 mHz Pentium shack computer that's been sitting dormant...what are some programs out there that can control the 840? Looking for a frequency keypad (which the 840 lacks), and basic rig functions control.
Does anyone know any good programs out there that can do that?

>You are kidding, right?

Not at all!

Granted, my station circa '86 or so wasn't much to brag about:

HF - Ten Tec Century 21, Nye Viking key
2M - Icom IC2AT
SWL - Realistic DX -160

Add to that a couple wire dipoles, a random wire to an MFJ tuner, and a Commodore C64 for logging, propagation forecasts, antenna design, etc. Oh, and a Dr. DX for interactive code practice. :)

With the exception of the computer stuff, all of it was secondhand. No, not much to brag about, obsolete as all get-out today, but great fun!

I've managed to pick most of it up again on the cheap, and fire it up from time to time to spark up the memories. It's still a blast. In some ways, hacking the ol' C64 is a lot more fun than turning on my new Wintel box. I don't have to worry about how soon it will be left behind by a new generation of hardware, either... that happened more than a decade ago.

It's not much different than trying to collect the Hallicrafters Sky Buddy or Heath Twoer one used as a budding ham, I suppose. It's just that looking for this stuff now is both easier and cheaper than it probably will be in another ten years.

I've found that for me, hamming with less is a lot more fun. QRP, homebrewing, modifying, and bringing old gear back from the dead is the niche of the hobby that I enjoy. Pushing my collection of old junk to and beyond it's limits is a challenge. I have a pipsqueak signal, willl never win a major (or even minor) contest, and Yaesu & Kenwood despair at ever seeing the inside of my wallet.

I get plenty of hands-on time with shiny new tech at work. The junkbox is where I go for fun.

>copied.

Whoops, bad choice of words on my part. "Copy" would have been more
appropriate for something along the lines of: "Does anyone have a
copy of the ARRL Handbook from 1983?"

I'm looking for the actual, physical hardware cartridge and docs. I
had great fun with my original back in the 80s, and would like to have
one to go with my "new" vintage C64 setup.

If you're willing to part with yours, contact me off the group and
maybe we can work something out.

I'd put that one to use on a scanner and pick up something along the lines of an MFJ1710 for the 202. My girlfriend's using my old HTX-200 (the itty-bity 200mw one) with the SMA jack yanked out and replaced with a BNC so the 1710 would fit without an adapter, (ugly, ugly mod, but it works, though you have to rip out a screw anchor point, and the case won't fit back together quite flush) and it can hit a couple of repeaters downtown from our QTH in the northern suburbs. (Plano, Spring Creek and Custer. It hits the W5FC and KA5CTN repeaters fairly solidly, for those familiar with the Dallas area)

On my Kenwood D7A, I'm using a Comet rubberized whip that certainly seems like the way to go it you're stuck with SMA.

OTOH, a field-portable groundplane antenna can, in most areas, turn a 5W HT into a respectable portable rig. I'm having excellent luck with the D7A on the simple SO239-and-brazing-rod groundplane from the ARRL antenna book, using a foot of 5/32 brass tube with another foot of the rod crimped in as the radiator, so it's quite tunable. The disadvantage there is that it's also easy to detune when you're moving it from place to place, but SWR meters are small, and tuning it again is pretty quick. With an easy-takedown homebrew PVC mast/stand, it's the best portable 2m setup I've used. The mast is about 5-6ft tall, but the foot is small enough to put it on top of a picnic table or car to give it enough height to be easily readable on a repeater I count myself lucky to hit solidly on my 5/8wave mobile antenna without cranking up the power.

Hi folks.

I guess I just got one too many linears, so here's your chance to pick up a beaut. It's a really nice L4B that's clean, works right, and your satisfaction is guaranteed. The power supply has been updated (by someone before me) with new diodes with bypass resistors, new capacitors plus a new glitch resistor, the right kind of course.

The amp itself has a pair of genuine well-matched Eimac 3-500Z tubes, and they test out great on all bands, 80-10. The front panel is the newer design, and all of the controls work smooth and perfectly, including (of course) the power switch.

I don't plan to make a cent on this one, I just hate to see it sit unused. I would prefer a local pickup in Southern NH, but I will ship if needed at your cost. I've got $725 in this thing, and that's my price. You get all the cleanup, testing, etc that I did FREE, plus 10 days to make sure you like it. Manual included.

Please contact me at (800) 962-2949 or (603) 465-2788

Thanks!

Hi Bill.

First, please allow me to apologize for the other reply I see to your
very good question. Simply pointing someone to such a generic web site
as the ARRL website is not a good answer to any question (save "What is
the ARRL's website?").

I'm not saying that that arrl.org is a bad site. It's a good site, but
using it as an answer to your question showed little to no thought.

Check out www.amsat.org, the Amateur Radio Satellite Corporation. This
site is dedicated to ham radio satellite use and has FAQs and
introductory articles.

I have not yet made a QSO via sat, but I intend to soon. Perhaps we'll
have the opportunity to talk via sat some time!

Rick, now you're talking! I just couldn't help slamming your request for C-64 software (heck, I used to have a Vic-20 -- remember THOSE?!) but then you mentioned two pieces of equipment that brought a sigh out of me.

The DX-160 was my first piece of radio equipment. I got it as a teenager in the late 70s, and it was my passport into ham radio.

Another teenage friend of mine in the late 70s had a Century 21, and although I never owned one, I got to use it quite a bit. Now THAT was a great radio. I wish I could find one at a hamfest so I could finally own one now, but I never see 'em. Probably because they were such a handsome rig, everyone who's got one doesn't want to part with it. Want to part with yours?

:)

Well, let's see here. I've been searching for only 10 minutes, and
while I haven't found a review, I did manage to find a mod page for
the radio. All you have to do to open the radio up for 26 to 30 MHz
TRANSCEIVE is move a jumper plug from one set of pins to another
inside the radio.

I thought it was against the law in the U.S. to sell radios that were
readily designed to operate illegally ... maybe an e-mail to the FCC
is in order.

For sale:

Heath HR-1680 solid-state receiver. Covers 80/40/20/15/10m
bands, SSB/CW. Clean and stock inside. Nice front panel,
knobs, bezel. Paint on cabinet scratched up pretty badly,
but no metal damage. No extraneous holes. Receives, but
it's weak on all bands. A W7FG manual copy is included.
Probably something simple wrong, but I have too darn many
project rigs to fix up already. Looking for a project?
Priced to sell at $30 + shipping.

Your information is incorrect. No Jumper will modify this radio. You must be looking at the wrong thing. (big surprise!)

This radio cannot be modified for out of band coverage unless you have the "export" version which requires an electronic key. (A small pcb with a few surface mount components on it)

I keep having to educate you folks that "know so much" about these radios!

If you had a clue as to what is currently going on with this equipment, you wouldn't be displaying your ignorance here.

The RCI-2950DX, The RCI-2970DX are also models that CAN NOT be modified by jumper or an electronic key.

ASK Amateur Electronic Supply or Ham Radio Outlet. Their models WILL NOT MODIFY!!!!

You must have a different revision (export version) for it to even accept the modification key!

Darn it, When will you people listen?

Once again, Do proper research and LISTEN!!!!

Gee, I guess you never had an old ham radio with crystal positions that were marked CHANNEL!!!

Who cares! Lots of folks use the term Channel and frequency interchangeably although obviously incorrectly.

I suppose we should all complain about the radio that has "Clarifier" or "Fine Tune" written on the panel instead of the "Receiver Incremental Tuning (RIT)" control.

How about the Uniden HR2510 that so many old "hambones" consider a ham radio? It is labeled by channels. So do most of your Kenwoods, Icoms and the rest of that wonderful stuff when pertaining to memories frequencies. Since when is it a memory channel? I thought all this "superior" equipment only had memory frequencies? Its just terminology buddy, Get a grip!

Never mind, don't bother get a grip. Attitudes like this is what kills the attraction to ham radio anyway. Good work, keep it going. It's obvious no one can tell you anything. You already know everything about this equipment.

Open minded people are required to advance any hobby or technology. Try opening yours!

RCI will build a radio for you to your specifications just like they do for Galaxy if you contract them to do so. Unfortunately, the radios you see in your second link are illegal imports. Galaxy radio doesn't even support the Galaxy Saturn or the Saturn Turbo in the American Market. Check out:

http://www.galaxyradios.com/techsupport.html

Copied from the above page:
"Please be aware that we are the importer of the Galaxy DX radios only, and our technicians do not service the Saturn, Saturn Turbo, Melaka, Pluto, Sirius or any Galaxy radios other than the DX models."

I looked around for quite a while, too.
Evidently Gordon West wrote and article in Popular Communications (January, 2001, I believe) regarding the 2970DX.
The article must reflect positively on RCI because RCI mentions it on their website. I have not been able to find this article online. All I can find is a brief description of it: "Gordon West stopped by Ranger Communications and 'picked up' a 2970DX and went marching off into the hills with it." I would be surprised if Mr. West actually hooked the rig up to a spectrum analyzer.
If someone *gave* me an RCI 2970 to write a product review I would certainly highlight the positive features and neglect to mention the negative ones. QST buys the products they review.

I would also like to mention that modern amateur HF transceivers (at least the ones I own) can be modified to transmit everywhere they receive (500 KHz to 30 MHz). The dealer will tell you how to do it, if you can prove you have a valid MARS/CAP ticket. As Dick mentioned; it's the licensee's responsibility to know his band limits.

There's no incentive for the stores to drop their prices on the 756pro until the proII version arrives in their warehouses, or, until sales of the 756pro drop because people are sitting on their hands, waiting for the proII to arrive.

I seem to recall prices on the original 756 came down substantially, but not until the 756pro was in the stores.

ï¿½
FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a

transmitter that requires a grant of equipment authorization but for which no grant has been issued, and that it's a violation to transmit on frequencies allocated to a licensed radio service "without the appropriate Commission-issued station license." Violators could be subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

Look folks, Ranger makes OK CB radios. The 696 series, or whatever they are calling them are fine for CB usage. But, do not attempt to imply that the 2950, 2970, 2985, et al, are REAL ham radios. They are not, never have been, and never will be. They are a ruse, brought into this country as ham(snicker) rigs to get past customs. That's all. It's very similar to the black box cable TV descrambler industry. These are all test boxes.....yeah right! Get over it. \

They are fine for 10 meter FM usage.....IF you ad a tone board to them. They state that as an option. They don't even make one for them, nor do they have connections on the board for one. You have to wire them into the board yourself. SSB is also OK, as this does not require CTCSS.

You people touting these over-horsepowered CBs as ham rigs need to step back, take a deep breath, and accept things as they are.

Think I'll fire the blender up and have a couple of 'ritas.

Later.

541. HTX-202 transmit problem

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-12 02:41:05 UTC
From: monte.carroll@nashville.com
Message-ID: <3b4d0a4c.172311001@news.nashville.com>
Source record: 57494

I purchased a used Radio Shack HTX-202 that has performed flawlessly for the past few months - until last week. Suddenly, it appears I'm transmitting no audio.

After resetting the radio to the factory defaults, I've done some tests here at home using a scanner as a receiver and here's what I've found. When transmitting on 146.52 simplex, the signal breaks the scanner's squelch and my voice ("check, one, two, three...") comes through. The scanner antenna is about ten feet from the transmitting antenna. Then I transmit, using the correct offset, to the local repeater. The signal breaks the repeater's squelch, but there is no "check, one , two, three..." audio coming through.

Two things happened recently that may be of interest. About a week before the rig got sick, I began using a new Radio Shack Speaker Microphone (19-314). Testing it on the rig from the store, another operator replied that I was coming in "loud and clear". The "no audio" is evident with or without the external speaker-mic. Also recently, while hooking up the rig in the truck, I plugged in the 12-volt adapter while the radio was on. I had to turn it off, then back, on to get it to power up.

Any suggestions on what I can do to fix it? I got a great deal on it and would be heartbroken to have to spend a lot to have it fixed.

Thanks for your help.

If the rig works simplex but not through a repeater even though you have verified the correct offset it - might - be you need a subaudible ' PL " tone. You may already be fully aware of this and perhaps the repeater in question needs no PL but since this was not mentioned in your post I felt compelled to bring it up.

Frankly I hope that is the matter as it is easily ' fixed ' with no expense to you....my HTX-202 saw over 5 years of constant DX packet cluster use and when I put it away (in favor of internet dx cluster) it was still working fine.

I think the HTX 202 has already earned itself a very favorable place in Ham Radio history......

Sure do! A buddy of mine used a Vic as a RTTY terminal. Convinced me
to sell my TI-99/4 (the original with the chiclet keyboard) and
upgrade to the then-new C64.

I used to turn green with envy whenever I set foot in his shack. The
Vic was connected to a Drake TR-7, and I *still* want to have one some
day.

>The DX-160 was my first piece of radio equipment. I got it as a
>teenager in the late 70s, and it was my passport into ham radio.

The DX-160 was my first "real" radio, and I spent hours listening to
SW broadcasts and reading the mail on the CW subbands. I gave it away
to an aspiring young ham back in the late 80s, and I hope he enjoyed
it as much as I did.

> Probably because they were such a
>handsome rig, everyone who's got one doesn't want to part with it.
>Want to part with yours?

<g> Nope, I'm going to hang on to this one for a good long while. I
sold my original Century 21 not long after getting married. we were
living in a covenant-restricted duplex, and visible antennas were out
of the question. I shifted most of my hamming to VHF packet, and used
the proceeds from the C-21 for a TNC and some other long-forgotten
stuff. I regretted it almost immediately.

I bought a Century 22 later, but it never had the panache of the older
rig. I was fortunate enough to make a direct Century 22 for 21 swap
with a guy who wanted to use my newer, more compact rig in his RV.
Nice examples of the 21 still turn up on eBay from time to time.

Ahhhh, you're smarter than I was! :)

>The Commodore monitor, with its built-in speaker and audio, made for a great
>game machine... they don't make 'em like that anymore...

No, they sure don't. Setting up a computer system 15 or 20 years ago
seemed to be more of an adventure, and the machines themselves
radiated personality. Quirky personalities, in many cases, but always
interesting!

I'll bet you have fun when the ol' C64 is fired up again. It's a kind
of time travel experience, and brought back a rush of old memories for
me.

73,
Rick Kï¿½VJ

547. FS: Compaq Presario 12XL300 Notebook computer

Newsgroup: rec.radio.amateur.equipment

I have for sale a Compaq Presario 12XL300 Notebook computer. See
http://www.compaqworks.com/cwstore/templates/auctions/auc_moreinfo.asp?sku=A
99375-003&dept_id=0 for specifications.

Celeron 600 MHz (upgradable) processor
88 MB PC100 SDRAM
24X CD ROM
6GB HDD
13" Color LCD Display (800X600)
External monitor support to 1024X768
2 USB ports
1 PCMCIA port (type I & II)
External laser mouse
56K modem
SoundBlaster/JBL sound system (great sound, even from it's own speakers)
Spare battery
AC Power supply/Charger
Car Power supply/Charger
Windows ME
MS Word
MS Money
All paperwork and recovery CD
3 year extended warranty (transferable)

I paid over $1700 for all this, I want $1000 shipped anywhere in the US.

I would also trade for a used Icom IC-706/MkII/MKIIG plus cash for the
difference.

There is a CW program that I have seen at Dayton that has CW
interactivity like Dr. DX did with the C-64 - a virtual radio
with the ability to simulate CW QSOs. Recall the name of it?

I am looking for a replacement battery pack(s) for a Heath HW24HT radio.
The battery pack says: (exactly as it is on the label)

HEATH
NICAD BATTERY PACK
HWA 110
9.6V 450mAh

I would be looking for an exact replacement battery or even more powerful one and also it would be nice to know if there is a battery pack where standard AAA or AA batteries could also be used too. I am interested in also finding a better antenna for this 2meter/70cm radio than the rubber ducky it has.

I am also looking for battery packs for the ICOM IC-T7H HT and also dual band antennas better than the rubber ducky antenna too.

So, these radios are UNMODIFIABLE, huh? Well, another quick search resulted in my discovery of several places that sell these radios modified. A typical example, this one a fine, reputable dealer in Florida:

http://www.pinklightning.com/Ranger.htm

Oh, and sure -- they say the radios are "FOR EXPORT," just like you say! But wait! Let's read their disclaimer to see if they'll really ONLY sell the radios to foreign purchasers (and find out a little about what "peaking and tuning" really is)! Read the disclaimer -- I'm surprised they're comfortable advertising their illegal service on the Internet!

http://www.pinklightning.com/Peaking.htm

Sorry my friend, you can't convince me. These radios are glorified CBs that are designed to be modified. Otherwise, if Ranger is so interested in amateur radio, how come we don't see them selling any equipment for the other HF bands? After all, 10 will be dead again in a couple of years and their "supposed" market will dry up until the next sunspot peak comes around. (Radio Shack took their 10-meter rig off the market for a few years until things heated up again.) If Ranger REALLY is after the ham market, it seems it'd be more logical to sell a 160-10 meter HF rig -- or at least one that covers a few of the lower HF bands that'll be popular when the sunspot cycle wanes again.

The receiver is so bad in this radio they should be giving them away. Icom has introduced lemon after lemon in the HF radio range. Its seems it takes 3 versions of every radio to get a good one. Look at the 706 MKXXXX etc. The 775DSP was a lemon, the 737/738 had problems, the 781 although a good rig had problems etc etc etc. Its a pity they treat their customers like this. I would not for the life of me buy Icom based on their track record of HF design.

It seem their engineers are not competent enough to design a product that would meet basic benchmarks. They seem to have a fundemental mistunderstanding of what is required to make a HF radio work. I would not be surprised if their design work is contracted out and they intergrate all the bits themselves. How else could you create such Frankenstein transceivers.

RCI PRODUCES CB CRAP THEY DUMPING ALL THEIR GEAR IN THE ASIAN MARKETS. THEIR EQUIPMENT IS SOLELY REPSONSIBLE FOR THE TOTAL DESTRUCTION OF THE 10 METRE BAND IN ASIA AND PACIFIC. THEY STARTING TO PRODUCE EQUIPMENT THAT GOES AS HIGH AS 14 MHZ. THE PIRATES HAVE ALREADY STARTED AND HAVE HUGE NUMBERS NOW ON 20 METERS. NO HAM SHOULD BE SUPPORTING THESE COMPANIES.

IT MIGHT NOT BE APPRARENT IN NORTH AMERICA. BUT ITS ONLY A MATTER OF TIME ONCE IT GETS INTO SOUTH AMERICA. YOU MARK MY WORDS.

So most all the H.F. "ham" rigs modifiable for 11 meter coverage. I guess we should consider all of them CB radios since they modify and are used by a lot of people on CB. I guess they are all glorified CB's too!

Yes you can see them posted on webpages by proud CB operators as their CB base station. Just because something can be modified for use where its not supposed to be, you want to out throw them out of the "ham" market.

Remember, Alinco didn't make anything but vhf and uhf equipment at first either so I guess they would be considered by you to be 2 meter band CB manufacturers and not "real ham equipment" because they didn't manufacture H.F. equipment. Of course they are "okay" now since they are selling H.F. stuff (by that standard anyway).

You folks are not interested in equipment, you are just fighting the classic ham verses CB war that everyone is tired of.
You are not fooling anyone but yourselves. If the equipment meets required specifications and is used on the amateur radio bands, the fact remains that it is amateur radio equipment. If it were illegal and not accepted by the FCC then I guess Amateur Electronic Supply, Ham Radio Outlet and all the big ham store's are just as guilty as your local CB or truck stop. There are great big gaping holes in all your arguments! All the radio snobs are just going to have to accept it. If you don't like it, don't buy it. Don't give us this bogus argument that its not ham equipment!

I never felt Icom or Alinco was qualified as quality ham equipment, but that's just my opinion. Your mileage with that stuff may very. I remember when Icom first came on the market. My brother in law, my sister and I are all licensed hams and we all have had Icom equipment. Every Icom we had with the exception of the old IC-2AT had their problems with quality, years later they have emerged as a pretty decent manufacturer. Yaesu and Kenwood have been around a long time before them and they had a much better reputation at the time. Hopefully the FEW open minded hams that are left may see Ranger bloom into a full fledged amateur product line company so people will have more choices. Most surviving amateur radio manufacturers are only still in business because they make commercial stuff also. If they relied only on the amateur market, they'd be gone along time ago. Fortunately, Ranger makes commercial and CB stuff and are diversified enough to survive.

Their six meter stuff will never modify to go on CB, neither will their vhf handhelds or rural telephony equipment. You guys are just prejudice, admit it!

Carry on folks, I'm just about tired of wasting my time with you.

564. Re: HTX-202 transmit problem

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-12 14:17:56 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <9ikbssish1@madmax.keyway.net>
Source record: 57317

It is unlikely that a scanner would be able to hear the
repeater signal with you transmitting 600kc away and
so close physically. It is possible you have the wrong
PL, Power is down, too far off frequency, or suffering
from multipath distortion from your location.

Also, the first symptom of an under-volt condition, is a
loss of transmit audio (but you wouldn't hear it on .52
either).

Jim, AC6TK

"Monte B. Carroll" <monte.carroll@nashville.com> wrote in message
news:3b4d0a4c.172311001@news.nashville.com...
:
: I purchased a used Radio Shack HTX-202 that has performed
flawlessly
: for the past few months - until last week. Suddenly, it appears
I'm
: transmitting no audio.
:
: After resetting the radio to the factory defaults, I've done some
: tests here at home using a scanner as a receiver and here's what
I've
: found. When transmitting on 146.52 simplex, the signal breaks the
: scanner's squelch and my voice ("check, one, two, three...") comes
: through. The scanner antenna is about ten feet from the
transmitting
: antenna. Then I transmit, using the correct offset, to the local
: repeater. The signal breaks the repeater's squelch, but there is
no
: "check, one , two, three..." audio coming through.
:
: Two things happened recently that may be of interest. About a week
: before the rig got sick, I began using a new Radio Shack Speaker
: Microphone (19-314). Testing it on the rig from the store, another
: operator replied that I was coming in "loud and clear". The "no
: audio" is evident with or without the external speaker-mic. Also
: recently, while hooking up the rig in the truck, I plugged in the
: 12-volt adapter while the radio was on. I had to turn it off, then
: back, on to get it to power up.
:
: Any suggestions on what I can do to fix it? I got a great deal on

it
: and would be heartbroken to have to spend a lot to have it fixed.
:
: Thanks for your help.

YOU need to accept things as they are, especially when your next "Cadillac" line of amateur equipment manufacturer gets out of the business. Kenwood may go the consumer electronics only path. Remember, it's been recently (within the last 20 years?) that they got big into home and mobile audio. They have seen the light! With limited Amateur purchases they have diversified.

By the way, Ranger WILL install the boards for you. They are using standard Communication Specialists encoder products. They have realized with their new RCI-5054DX radio that this is a MUST for the FM repeater enthusiast.

Ranger has been "in the country" for many years marketing commercial and CB equipment. Go to their website and read about it!

I guess the FCC should REMIND Amateur Electronic Supply, Ham Radio Outlet
and numerous others if Ranger equipment is in this category then huh?

TCARC Hamfest 2001 Scheduled for Saturday, August 4, 2001

ITHACA, NY The Tompkins County Amateur Radio Club announces the Finger

Lakes HAM-IN (hamfest and fly-in) at Tompkins County Airport (KITH), 3
miles NE of Ithaca on Route 13, on Saturday August 4, 2001.

Ham radio seminars TBA.

Vendor setup starts at 6 AM (inquire for Friday night setup time).
Doors open to the public at 7 AM Saturday morning.
Hamfest closes at 2 PM Saturday afternoon.
Large hangar for indoor vendors and displays.
Drive-in setup.
Paved outdoor flea market and parking.
Aviation displays - fly in and show your plane for free!
Breakfast and lunch served by Boy Scouts.
Admission: $5.00 at the door, $4 in advance until 7/15/2001.
Indoor tables: $10.00.
Outdoor space $2.00 each.
Under 18 free.
ARRL sanctioned. VE exams, as always walk-ins welcome at tests.
Talk-in on 146.970- AF2A repeater.

More info, including a PDF format flyer, is available on the club
website at
http://www.compcenter.com/~tcarc/

For more info contact Richard Spingarn 607-387-5251 or <a
href=mailto:richard@eagleprint.com>email richard@eagleprint.com.

How do you jam a vhf and uhf public service band with 27 MHz CB equipment?

A lot of ignorant CBers think they can, but most of them never heard of a duplexer or any kind of tuned cavity.

Since when do Ham radio operators "have a right" to radio frequencies and CBers and other citizens don't?

"Hams" haven't really written rules for anyone but themselves thank goodness. (And most of them don't follow their own either!)

Ever heard a 5K amp run on 75 or 20 meters? Surely not! HA!

Here we go, CB verses Ham again and again and again and again and again and again.....

Not a right - a privilege. CB'ers are given their privilege in their respective band, and amateurs have theirs in others.

By getting the appropriate license, you can have the privelege of access to these other frequencies.

If a person does not understand why they need to achieve knowledge to operate in these other bands, then the process of acquiring it will show them some of the reasons for regulation of the privilege.

574. It boils down to this...

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-12 16:19:33 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <9ikj10pqq1@madmax.keyway.net>
Source record: 57327
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

We have to be careful who and what we attack or
we may fall prey to our own snares.

1) Ham radios need not be "type accepted" because
they are intended for operation by licensed Hams.
Hams and prospective hams have always needed
to build, buy or modify equipment in order to learn
about ham radio and be able to participate. The fact
that the ham is assumed to be able to build, modify
or adapt equipment from other services, places the
sole responsibility for proper operation on the licensee
rather than the radio. It is understood that ALL radios
can be modified to operate in an unauthorized manner.

2) Radios intended for use on CB or other
commercial "channels" such as marine, must be
"type accepted" for their intended use, and must not
be tampered with in a way that might result in improper
operation. In fact there has been a move to limit
responsibility only to the manufacturer. Hence,
Cell, Nextel and a host of emerging technologies
that require remote customer activation and time
charges. This is because of numerous complaints
by those who can't get a word in otherwise.

3) Traditionally, "good amateur practice" was the
standard for spectral purity and operations, although
the abuse of 10, 11 and 12 meters by non-hams who
have found this loophole to exploit, has resulted in
tighter restrictions.

4) With the advent of the no-code ham license,
perhaps it is no longer necessary for prospective
hams to be able to buy radios until after they are
licensed, stamped, blued,glued, tattooed and boo-
hooed by every police, political and security agency
in the world (sorry, I got carried away).

The point is, there are no illegal Ham Radios (except for
a few exceptions that don't really apply to hams) only
illegal Ham Radio operators. We are all tested on our
band privileges. But, There are no illegal CB (or
commercial) operators because they are untrained and
assumed to be unable to distinguish right from wrong?
Only equipment and the manufacturers and suppliers

are held responsible for "allowing" the operators to
"inadvertently" operate outside their authorizations.

: So most all the H.F. "ham" rigs modifiable for 11 meter coverage. I
guess we
: should consider all of them CB radios since they modify and are
used by a
: lot of people on CB. I guess they are all glorified CB's too!
:
: Yes you can see them posted on webpages by proud CB operators as
their CB
: base station. Just because something can be modified for use where
its not
: supposed to be, you want to out throw them out of the "ham" market.
:
: Remember, Alinco didn't make anything but vhf and uhf equipment at
first
: either so I guess they would be considered by you to be 2 meter
band CB
: manufacturers and not "real ham equipment" because they didn't
manufacture
: H.F. equipment. Of course they are "okay" now since they are
selling H.F.
: stuff (by that standard anyway).
:
: You folks are not interested in equipment, you are just fighting
the classic
: ham verses CB war that everyone is tired of.
: You are not fooling anyone but yourselves. If the equipment meets
required
: specifications and is used on the amateur radio bands, the fact
remains that
: it is amateur radio equipment. If it were illegal and not accepted
by the
: FCC then I guess Amateur Electronic Supply, Ham Radio Outlet and
all the big
: ham store's are just as guilty as your local CB or truck stop.
There are
: great big gaping holes in all your arguments! All the radio snobs
are just
: going to have to accept it. If you don't like it, don't buy it.
Don't give
: us this bogus argument that its not ham equipment!
:
: I never felt Icom or Alinco was qualified as quality ham equipment,
but

: that's just my opinion. Your mileage with that stuff may very. I
remember
: when Icom first came on the market. My brother in law, my sister
and I are
: all licensed hams and we all have had Icom equipment. Every Icom we
had with
: the exception of the old IC-2AT had their problems with quality,
years later
: they have emerged as a pretty decent manufacturer. Yaesu and
Kenwood have
: been around a long time before them and they had a much better
reputation at
: the time. Hopefully the FEW open minded hams that are left may see
Ranger
: bloom into a full fledged amateur product line company so people
will have
: more choices. Most surviving amateur radio manufacturers are only
still in
: business because they make commercial stuff also. If they relied
only on the
: amateur market, they'd be gone along time ago. Fortunately, Ranger
makes
: commercial and CB stuff and are diversified enough to survive.
:
: Their six meter stuff will never modify to go on CB, neither will
their vhf
: handhelds or rural telephony equipment. You guys are just
prejudice, admit
: it!
:
: Carry on folks, I'm just about tired of wasting my time with you.

Damn straight. The FCC should send a letter of notice to the legitimate
ham dealers informing them that the RCI rigs are illegal junk, and follow
it up with a visit to the Ranger manufacturing and distribution facilities
to close them down, sieze the inventories, and prosecute the principals.
While they are at it, they should do likewise to Copper Electronics and
it's principals...

Ham rigs do have to meet FCC approval before they can be sold in the US (see back cover of December 2000 QST ad for Kenwood TS 2000). New models must meet certain spectral purity requirements. They don't call this "type acceptance" but many hams refer to it as such.

Right. Amps for amateur use cannot be sold to operate "out of the box" between 24 and 50 MHz (or something like that, I don't have the regs in front of me). Most, however, can be modified to pick up 10 and 12 meters.

I'm not sure if I follow this point. You mean that one should have a ham ticket in order to buy any ham tranceiver?
>

Right. At least as far as CB/commercial equip goes. The ham must be sure he is in compliance with FCC rules. The radio won't do it for him.

Finally, an excellent well reasoned response that we can respect if you
agree with it or not!

Thank You!

These turn up on EBay at least one a week. If you're not in a hurry,
you'll find one within a month. I've bought several of them there, as
well as a lot of the accessories, quite successfully.

I agree!
Just remember that frequencies are like a "natural resource" and Hams are
not the radio spectrum police!
The FCC currently has that jurisdiction (Only in the US).

I don't see what in the heck this has to do with the original arguement over
Ranger making a radio for Ham use and a bunch of soreheads pitchin a fit
over it! If it meets the specs and is used correctly, what is the deal?

One little difference here:

AES, HRO and other ham dealers will only perform MARS/CAP mods if you bring in a copy of the license that authorizes it. In comparison, I have found several CB dealers on the Web that will perform these mods for anyone and everyone, regardless of their justification for doing so. Sure, you can't control what people do in their workshops at home, and many hams do "open up" their radios. I'm not saying hams are any better or worse than CBers as people. But when "authorized dealers" offer to perform illegal modifications in-house for anyone with a couple of bucks, there's a problem. You will NEVER see HRO, AES, Texas Towers, Burghardt's or any other ham dealer ADVERTISING that they'll perform mods for you -- even if it's "at your own risk." I dare you to go surfing and try to find one.

And I was mistaken -- it's Ranger's RCI-2950 that employs a jumper plug that you move from one set of pins to the other to perform the out-of-band mod. But my logic still stands: it's against U.S. law (and I'm pretty sure it applies to CBers as well as hams) to sell a radio in this country that is readily modifiable for non-type-accepted use. With most, if not all, of the type-accepted ham gear you see out there, there are mods -- but you have to be fairly adept with a soldering iron and surface-mount technology these days to perform them.

I wouldn't be so quick to slam ICOM -- they have one of the highest reputations in the ham community today. In fact, I've been a Kenwood man for all of my 20 years of hamming (TS-530SP, TS-440S, TS-850S, TS-570D) until now. Last month my TS-570D got taken out by lightning, and I replaced it with an ICOM IC-746. It has a full-duty-cycle rated amp -- do you know what that means? Yaesu can't make that claim with their competing FT-920 rig, and the rig has far more features for the money than a TS-570S.

Alinco's not a bad brand -- yeah, there was resistance to the new name at first, about 10 years ago, but I think they've established themselves as a decent competitor in the ham market. But you're right -- they don't make any high-end HF stuff -- yet. But they made some of the best and most affordable dual-band VHF/UHF mobile equipment in the early 90s!

Lots of "real" hams have modified CB and business band radios to operate on the two, six, ten and seventy centimeter meter ham bands. Whether or not a radio is a CB radio or not is irrelevant to hams. The manufacturer has to worry about FCC approval in order to sell new amateur gear, not the amateur radio operator. I'll use any radio I please and I will make it conform to the FCC's prescribed emission standards.

The world is changing and lots of people aren't coping very well with the changes. I'm one of them. It merely depends upon the topic of discussion at the moment. However, RCI does not bother me in the least. Obviously, there is a market for their products. Just as obvious is the fact that if RCI wasn't fulfilling that need, someone else would. Boycotting RCI is pointless. I don't buy their stuff anyway. I had a 2970 for a while. I wasn't impressed. I attribute the experience to suffering a major brain fart. RCI is history for me anyway and the brain fart is over. At least until the next one.

Yes, there are pirate stations operating on the ham bands. So what? You can't stop them. Our FCC can't stop them. The Indonesian, Mexican and Australian governments can't stop them, just to name a few. So why is anyone worrying about it? Instead of allowing yourself to get upset over something you are powerless to change, how about finding something to do that makes you happy?

I came very close to selling all of my amateur radio equipment a while back. Close enough to know that if I get too upset again because the world isn't the way it used to be, I can always sell it for real. To put the icing on the cake, I have purchased two brand new HF/VHF/UHF combo rigs this year. I'm not happy with either one. Things have changed. So what? The world doesn't care.

If I cannot find some enjoyable aspect to amateur radio in a while, everything will go bye-byes for good. I've always wanted to cast my own small statues and trinkets (lost wax). I think I may give that a whirl if being a ham no longer appeals to me. Life is too short to be miserable. Sometimes it IS best to walk away and start over again. At least that way the ones left enjoying the hobby won't have to hear you

whine. (not directed at those whose posts I tagged along with)

I am selling my Ten-Tec Omni V station. Consists on the Ten-Tec Omni V model 562, matching speaker/power supply console model 961, desk mic model 705, and remote tuning knob model 301. Every filter slot is filled. Includes the standard 2.4kHz filter, as well as optional model 288 1.8kHz, model 285 .5kHz, and model 282 .25kHz, as well as model 219 .25kHz filter installed in the 9mHz IF. Built in noise blanker and speech processor.
The receiver section of the Omni V is considered by many to be the best receiver Ten-Tec has ever offered. Just back in May from Ten-Tec for an alignment and replacement of internal battery, as well as a complete check up. Includes the original manual, and original cartons. In excellent condition. Price for all: $1200.

Jon, K1VVC
Greenville, SC

Now we are starting to make a little sense. Icom is making okay stuff now, they weren't too great initially. Give Ranger communications the same chance Alinco got. I personally am a fan of the Kenwood stuff, I am beginning to wonder about them though. I agree that the newer Yaesu stuff is a little flaky. I played with the FT-847 and was not impressed at all.
I personally use a Kenwood TS-50S, TM-733A, TS680S as well as RCI-2970DX and various Alinco handhelds. Lets just not blame Ranger for the communication worlds problems.

Another point though is that almost none of the Ham equipment is any harder to modify for General coverage than the Ranger stuff. Think about this, If you modify a general coverage H.F. ham radio, you can interfere with a whole lot more than 10 or 12 meters and a bunch of hams. So who is the most irresponsible, the manufacturers of 10 & 12 meter equipment that can only expand to a small spectrum or the wonderful folks at Icom, Kenwood, Yaesu and the rest that only require the snipping of a diode or some other simple mod and you can screw up any frequency you want from about 1.6 to 30Mhz !!! How about the vhf & uhf stuff that will cover any public service freq from at least 138-174MHz and 400 to 470 or more? Which company's products have the most potential to be abused? See what I have been trying to tell you. It's all a bunch of hypocrisy! If you go by this thinking, I guess all their equipment should be banned! Actually, if it weren't for lawsuits you would still have to show an Amateur Radio license to purchase equipment. But now any fool can walk into your local wonderful Radio Shack and buy a radio and screw up the local 2 meter band if not others!

You Can't Blame The Manufacturer, Only The End User!!!!

The only people that would suffer from having
"thinly-disguised-as-ham-radio illegal extended-coverage CB rigs"
pulled off the market or severly restricted are the freebanders and
outlaw CBers that they are designed for.

A Foot-in-Mouth QUOTE: "..>If Ranger REALLY is after the ham market (which they aren't), it seems it'd be more
>> logical to sell a 160-10 meter HF rig -- or at least one that covers a few of
the lower HF bands that'll be popular when the sunspot cycle wanes again....."
WELL, besides Ranger's new 6M all-mode "version" of the 2950 (the 5054DX) is being followed by a 20M and a 40M all mode versions in the fall.....These radios, (All-mode!!) the 10/12, 6, 20, & 40M ALL cost less than an FM dualband rig, & simply Can't be beat for the price, & blow away any other "Under $330" (if there are any!) monoband & rigs! Believe me, If Yaesu, Icom, Alinco or Kenwood came out with the EXACT SAME 25W ALL Mode rigs for 6M or 20M, with built in SWR meters & continously variable output, scan ect & sold it for $299-339, people would be jumping over each other having orgasms trying to post what a great radio "their company" came out with.
*** ......I got it...Perhaps we should require all hams that buy "Ranger" brand amateur gear to wear a big silver star on their chests,.....so that all the "I only respect those with a $4K buck setups" can Easily identify them at Hamfests & club meetings.....

Wow! Someone still has a Heath HW24HT!! I had one around here somewhere, but I honestly haven't been able to find it in over a year. They were a great radio in their day. But yes, the radio is a bit tricky to program. Plan on keeping the manual with you if you expect to do anything more complicated than picking from among the channels you already programmed in.

As I recall the radio and the manual, it really wasn't a bad manual, it is just that the radio itself was a bit tricky -- when Standard designed the HW24HT it had features that no one else offered yet and you really did need to follow the directions step by step to get it set up properly. But, at least as I remember mine, it really did work if you sat down at a table with the radio and the manual; looked up each thing you wanted to program, and followed the steps. The steps were correct (more than I can say for several radios today) but the sections of the manual were not always in the order that a person would want to do them. I'd suggest reading through the manual to get an idea of what you can do and where each thing is in the manual. Then decide what you want to do (probably program the memory channels) and work through it by looking up the steps you need.

Since you HAVE the manual, let me suggest making a copy of the picture of the face of the radio with all the buttons marked. Laminate that copy and keep it. If the markings on the radio haven't already worn off, they will once you start carrying the radio around and using it.

Heath originally sold the standard battery pack and a higher voltage battery pack which was taller, plus they had a shell to hold six AA batteries. I don't have my old HW24HT or manual handy to check for part numbers. The radio itself and the batteries packs were made by Standard. Some of the ham battery dealers probably still have packs for the radio. You might try somewhere like Mr NiCad.

As for the antenna, the HW24HT uses a standard BNC connector so you should be able to get just about any sort of antenna you'd like. The original antenna used a loading coil in a rigid plastic base and a thin flexible "rubber duck" element about 6" long. The radio isn't terribly fussy and will transmit into just about anything resembling an antenna - I think it would probably work into a piece of wet string if you cut it near a quarter-wavelength.

How about the review on this Ranger Radio?

http://www.eham.net/reviews/review/5011

This brings up the point that the noise blankers on these units are much more effective than those on a lot of the other "ham" rigs. I own a TS-50S Kenwood, the noise blanker isn't anywhere nearly as effective as the one on my RCI-2970DX. I removed the Kenwood and use the 2970DX for my favorite bands 10 and12 meters . It has been my experience that most "CB" type equipment does have more effective noise blanking. I can point out crappy features of the Kenwoods, Yaesu's etc just as easily as folks want to pick apart the RCI stuff.

Oh come on Charlie. This guy is talking about not being rude to new hams. He is not discussing whether thinly-disguised illegal CB radios are legitimate or not.

You know as well as I do that RCI found a marketing niche (illegal CB) that enabled them to stay alive during the 10 meter sunspot lull. There is no one that seriously believes this company or any of the others catering to the illegal CB market ever intends to make legitimate ham radios.

And there's nothing Fudd-ish about refusing to coddle illegal CBers. No matter how you slice it, freebanding is not a viable substitute for the novice ham ticket. Freebanders and scofflaws do not deserve any respect from hams. If hams lack of respect for freebanders illegal "hobby" hurts freebanders feelings, then freebanders should change their ways.

Of course, if freebanders stop operating illegally and want to get into ham radio then I believe the majority of hams will welcome them with open arms.

If they refuse to give up illegal CB and approach ham radio with a "bend the rules when you can get away with it" attitude, then they should expect rudeness and rejection.

OK Bimbo, this is what RANGER sent back when I asked about the tone board.
And I can't wait to try the roger beep feature on six! That should liven
things up!

Randy,
The CTCSS tone board will not be installed in the unit direct from the
factory.
Due to the many variations used in different parts of the US, we elected to
allow the user to choose the one that best suits his needs.
However, it can be installed by the dealer you purchase it from.

What use would a freebander have for a six meter radio, and what frequencies do you suggest they may be modded for? As for as the modulation mod, AM is not used on six, or at least it is not around here. If you read the thread back a little, you would notice that it has drifted to discussion about the RCI-5054DX.....Ranger's new six meter rig. If you go to the Ranger website, you can see a picture of it. I still a bit perplexed about the roger beep button on it though. CQ six meters.......CQ six meters......N5ABC......BEEP......I don't think so.

I do agree that the 10 meter versions are *mostly* a trick to get modifiable rigs past customs. HRO and AES selling them does not negate that fact, although the newer DX models are purported to require a special board for out of band operation.

I have more respect for a person that may use illegal cb channels and not harm anyone than some jerk that has to insist on how "we" should be rude and reject others. Most hams are tired of receiving bad publicity from a few that rant and rave from their soap boxes about hams are gods and cb is shit . I would bet mr.voobner (no caps on purpose) has dirt in his soap box like everyone else.

: -Aaron-

But Aaron, ANY RADIO can be modified! Hell I even
did it to my TS 830s (have never transmitted beyond a
dummy load though). So do we outlaw them all? Maybe
the FCC could charge them another fee to slip some of
them through!

So what I propose is:

1) These VEC's quit selling out ham tickets to people
they know nothing about, who often don't know or care
about the 100 years of collected knowlege in theory and
operation, then;

2) Restrict new and used sales to licensed amateurs.

But since none of this will work unless VEC's and
sellers are completely vigilant;

3) Quit whining to the FCC and the government to
fix our self-policed hobby before they decide we're
a nuisance and re-allocate everything including 27 Mhz
for 10 GigaWatt broadcasting or paging or whatever!

That's just the kind of thing they do to the other
services about every ten years!

This is funny!

Reminds me of a neighbor who used to steal
my tools all the time. But he was such a wus
that whenever I caught him in his garage, I'd
pull up with a tow truck and march in and grab
a couple of tool boxes to go!

He'd start whining so I'd open 'em up and
say "Oh wow! A few of these in here really
are yours!, I'll bring 'em back after I get a
chance to sort 'em all out".

LMAO

Are there any mods for a newer kenwood th-g71a. I've seen a mod on the net that will open new freq's. It also said that it will open up a new menu for changing between am and fm on 118-136. This menu (#16) is already open on my rig. I don't what to mess with the radio if it might mess the radio up or if kenwood changed the radio to not allow it.

> Just remember that frequencies are like a "natural resource"

Wrong. Neither the US - or any state - Constitution grants an individual
the right to transmit on any frequency. An individual's use of the airwaves
in the US is a privilidge which is granted to an individual by the FCC
after the individual has met the FCC specified technical competency
requirements for the frequency(s) in which they desire to transmit.

>and Hams are not the radio spectrum police!
> The FCC currently has that jurisdiction (Only in the US).

And under FCC jurisdiction, the FCC has charged licensed hams with policing
those bands which they have been assigned.

I agree. Not only that, every ham transmitter ever made since the 1940's comes able to transmit above and below the ham bands. But here's a question. How come there aren't crowded "freebands" chock full of illegal pirate ops above and below 160, 80, 40, 20, and 15 meters? The equipment to enable it certainly exists. (No, Tim. Hearing a few spanish speaking comms on 6.995 Mhz does not qualify. It doesn't compare to what's going on around 10/11 meters)

> So do we outlaw them all? Maybe
> the FCC could charge them another fee to slip some of
> them through!

Do you see any difference between a phoney export mobile radio with 10 khz channel spacings, talkback, roger beep, 5 bands of 40 channels, etc......and a TS-830-S? HINT: one is designed to appeal to the illegal CB market.

Sorry to be so cynical, but everyone is dodging the obvious. The illegal export radio market is a growing problem. Pretending that it either doesn't exist or isn't a problem is deceitful.

629. FS: (New) Azimuth/Elevation Rotator

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-13 09:37:40 UTC
From: "C.D." <crd@sympatico.ca>
Message-ID: <0iz37.37979$RX6.2905903@news20.bellglobal.com>
Source record: 57383

Rare, unused, heavy duty, azimuth/elevation Emotator EV700D5X rotator by Emoto. Still in the bags. Was bought by the government for deployment overseas but was never used.

Includes rotator, controller and documentation. Specifically designed for serious satellite or EME work.
Fully computer compatible. Azimuth and elevation angles are displayed using a smart, concentric, dual-needle display. Compare against the Yaesu G-5400B and Yaesu G-5600B:

Yaesu G-5400B Braking Torque: 145
Yaesu G-5600B Braking Torque: 290
EV700D5X Braking Torque: 717

Yaesu G-5400B Vertical Torque: 101
Yaesu G-5600B Vertical Torque: 101
EV700D5X Vertical Torque: 215

Yaesu G-5400B Vertical Braking: 290
Yaesu G-5600B Vertical Braking: 290
EV700D5X Vertical Braking: 358

$1200 plus s/h or trade for Kenwood TL-922A HF amplifier. Shipping and insurance extra. PayPal, MO, or Postal Order accepted.

"Aaron H. Voobner" ......

You need to turn off that computer and go outside.
Go build a birdhouse or something.

So Aaron, how do you know what's going on up on 10/11 meter if you are just
running a legal stock cb?
Just wondering...

You mean to tell me that the roger beep is a "switched" feature?! All this moaning and groaning about something that can simply be switched off?! Amusing...absolutely amusing. My first rig had a roger beep that was non-switchable, so removal had to be done 'internally.' My radio never even saw a roger beep as I had it disabled at the time of purchase. I think it's funny that all this hubbub should arise from a feature that can be turned off at the push of a button.

Hi.....

I presume I'm directing my questions to current 756pro owners, so I'll try and remember that when reading any answers...hi. I'm 95% percent there as far as ordering the 'pro. Beautiful radio. I primarily want a pure receiver, whistles and bells (although nice) aside, and feel that, short of the 781, the 'pro is gonna give me that. In other words, a receiver that HEARS! Quiet, S1 readability, etc. However......I allow myself to be nagged by the promise of the TS-2000: firmware update ability, 144 & 440 (although I'm 90% HF'er), packet, etc..essentially the whistles and bells. Cheaper, too. The 746's rep is solid to be sure, and at half the $$ (minus filters) it woo's me, too. Bottom line, I don't take this purchase lightly (sure none of us do) and want to do it right. Want to be wowed by the receiver. Any saleman knows it's easy to sell you something. Feeling good about your purchase after you get it home is the tricky part. Anyhow, any input would be greatly greatly appreciated!

Also, just curious...microphone recommendations with the 'pro? SM-8, SM-20? Heil? EV 635A? thankyou..

To all that doesn't know,
Aaron is not a real person, irregardless of what
he may say or show you. He is an alter ego of
either Doug Adair, Frank Gilliland or Leland Scott.
I am saying this, because this "person" showed up
on rec.radio.cb a few months back when the three individuals above were
being trashed mouth by numerous
people, myself include I'm sorry to say.
Now both Doug and Frank's posts decrease due to complaints to their ISP
for TOS violations. Now, all of a Aaron" was resurrected and his post have
increased,. It was also proved by a couple other individuals that this
person was not who he claimed to be.
So in other words, take everything he says with a grain
of salt, he and others are here only to fan the flames rather
than to inform.

Landshark

> apart the RCI stuff.

Sure, so can I , but most of the other rigs are at least stable. Note
the report on the CW chirp. The rig is unstable. I assume the
regulation is not too hot. If the supply voltage was critical, the rig
would probably "FM" in the SSB mode. There is no excuse for an
unstable radio, no matter what the price. Heck, my first beater
homebrew novice transmitter, made purely from junk, did not chirp.
Also I note only fast AGC. Boy, I bet this sounds great on SSB. The
pumping effect must be awesome. Now, I'm not against using a ranger as
a ham rig, and could care less about this angle. A ham can run
anything he gets his hands on. The maker would have to deal with any
problems in this area with the fcc, etc. It's the poor performance I
don't care for. And don't think I only pick on the ranger. I also
slammed the ten tec scout for it's "stability" problem they had on the
low bands. The scout would try to adjust itself on the fly and would
make it sound unstable with it's "adjusting". No matter how it happens
, unstable is unstable. No excuse for this in the year 2001 at any
price. Who cares if the NB works if it's unstable. The only small rig
I have right now is the 706, but if it chirped, I'd send it back to
icom. If they couldn't fix it and it was a design flaw, I'd demand my
money back. Doesn't matter what brand it is. Now, I know everyone
doesn't have the money to buy the latest and greatest rig. I can
understand this. BUT, that doesn't mean that a ham should have
sub-standard performance because of this. For the price of a ranger,
they would be better off buying an old used rig that at least is
stable. IE: ic-730 or something along those lines. I bet the price
would be about the same, and the old 730 would eat the ranger for
lunch. And work 80-10 to boot. MK

As far as the modification issues.... I am not going to bother with that, but if a manufacturer is willing to produce radio equiptment that people will buy I am all for it! I have a hell of a time finding the radio's I want. Either you have to buy some type of "combo/multi-band unit" or our famous "big three" manufacturers make you pay an arm and a leg for them. If a company can produce (at a fair profit) decent equipment, thats where my dollars are going!

How about any of the following?

6 Meter Base or Mobiles
1.25Meter (220) Base or Mobiles?
Small in size self contained power supply 10-20 watt 2meter or 70cm base only rig
900 Mhz and 1.2Ghz mobiles/HT's/bases
A 50Mhz Thru 1.2Ghz All mode Transciever?
2 or 3 band HF Mobiles or Bases??

Alot of hams I am sure are not super rich (myself included, donated plasma for six months to buy my first HT) and are tired of the stranglehold that the big three manufacturers stick us with. If a manufacter would support the above listed possibilities, even if it is RCI, thats where my money will go. Definitely tired of only finding 1 6M mobile available out there, and the only other 6M band access is through the multi-band HF rigs which are ungodly expensive. Hmm... 220?? Good luck also....

I bought an Icom 706MKIIG from Lance, K4WH, and I must say it was even
better than what he said (I can't tell it from new).

I would buy from Lance again in a heartbeat, he is a person of honor.
Shipped fast too, good communicator, fair prices, great packaging.
What more could you ask?

Neil, K1VY

This is an UNPAID endorsement.

Source record: 57258

I called Ranger & asked about some of the "concerns" people brought up in this group......
1) Why no CTCSS as standard equipment on their new 6M all-mode rig....
The very courtious man explained that the main reason was too keep the "street price" under $330 for this 25W radio, & they fell strongly after doing some research that a $375-400 rig would not sell as well, & a large percentage of users would be buying it for SSB only.....
They WILL install the board for about $40 total, far less than the cost of a CTCSS board alone from the "Big Three", or you can install one yourself for about $25....
2) why is the switchable "roger beep" on the 6M radio...
He explained for 2 reasons: First, economics. The radio & functions are based on the existing 10M platform, & it would have raised the price of the radio to unacceptable levels to redesign the keypads, faceplate & circuits, & reprint ect just for the 6M rig. He also explained that "roger beep"actually started years ago in the Amateur bands as "ETS" (end of transmission tone) & is still popular w/ amateurs in some other countries where Ranger products are sold. Nasa to this day still uses ets beeps to communicate w/ astronauts to know exactly when they have unkeyed in bad signal times.....
3) What about 11M "mods" to the 10M rig...
He explained that all the current base & mobile versions of the "29xx" 10/12M radios sold in the USA CAN''T be internally modified to xmit/display 11M as sold, period. Unlike Icom, Kenwood, Alinco & Yaesu gear which ALL can be modified for 11M As sold, many by simply clipping an easy to reach wire or diode, or even with software only. There is an "export external" board some retailers are installing without their consent which can be added that will give the 11M, but the radio itself can't be modded without it. They are also the ONLY Amateur maker they know of to put a "warranty void" if removed sticker on the radio.
He also explained that just like the current Uniden, Radioshack & other 10M rigs, many of these "10M" radios are actually configured & sold as 40ch CB sets in other countries using the same basic platform, & it should be no big deal to "shut off" the roger beep in the US model. They will be introducing 20M & 40M all modes before Xmas, & the 6M rig is shipping to dealers Monday.
He was very sincere & I'm glad another company is comming out with Affordable ham gear w/ bands/modes that the other companies neglect, not just another me-too 2M HT or mobile..........

655. log prgrm + palm hot sync ??

Aaron is not a licensed amateur. He say's he is "practicing". Perhaps this
is why he rubs so many people the wrong way, or, maybe it's because he acts
like a spoiled child, I really don't know. :-)

laugh now and wait till the next sun spot cycle. Then you will find the bands jammed from end to end with pirates. Seriously if you ever get to the Pacific or Indian Ocean listen to the ham bands. Especially 10 and 12 meters. The funny thing is that the whole of 10 meters is full of FM heterodynes but you cant find them on the 26-27mhz band. Most of the activity is 10 meters, so much for the conspiracy!

Got stung on a "bought without seeing a picture" deal. Now
looking for parts for an Eico 777 tube-type CB radio. Need
the receiver VFO tuning capacitor and knob, and the cover
that goes over the crystal compartment on the side of the
cabinet. Any help appreciated. Will buy a complete rig if
necessary and make one good one out of two unknowns.

Mike,

No where have I ever posted "hams are gods and cb is shit" or ever
implied anything of the sort.

Hams are not gods. CB is not shit. Using illegal CB frequencies DOES
harm others.

669. We Have the New 5054DX all-mode.....

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-13 19:39:33 UTC
From: advanspec@aol.comburger
Message-ID: <20010713153933.05128.00004027@ng-ci1.aol.com>
Source record: 57273

Ranger Inc. was kind enough to send us the very first of the new 6M RCI-5054DX radio, it arrived today .Regular dealer shipments should start to arrive next week. We have opend up & hooked up the radio & here is some preliminary info for those interested:
The radio looks virtually identical inside & out to the current generation 2950DX 10/12M rig. Plenty of surface mount components & metal shielded sections. The output final transistors consist of a 2SC1971 driving dual 2SC1972's, different from the dual 2312's in the 10M rig. On our meter/dummy load the radio was doing 11W FM and 28-30W SSB (specs are 10/25W). Frequecy on our counter was accurate with the radio display. All the features of the 10M rig are present, including all mode squelch, variable output power CW/AM/FM/SSB, Built in SWR meter, Public Address capability, 10 memories and scan.
There were 2 "jumpers in the "location". The radio seems apparently unmodifiable with these jumpers. Trying all the various configuations resulted in all sorts of "crazy" freq displays (1.8000Mhz, 24.555 Mhz ect) & the radio seemed to be transmitting either in the 6M band or frozen at 45 Mhz regardless of display.
The radio came with a photocopy "preliminary manual". Mfgr's specs claim Sensitivity @ 0.15uV SSB for 10dB sinad, Image rejection ratio of -65dB, Spurious emissions of -50dB.
Finally, Here is the manuals Exact description for the "R.Beep" button:
."This switch activates the ROGER BEEP circuit. When enabled, the radio automatically xmits an audio tone each time you release the PTT. This indicates the end of each transmission so that stations who may be having trouble receiving will know you have finished xmitting. This feature is sometimes used in weak signal conditions, or other special circumstances. We Discourage use of this feature in normal operation, as it can be annoying to other operators....."

672. Best HF hand held receiver?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-13 21:14:25 UTC
From: John <jh.lewis@worldnet.att.net>
Message-ID: <RwJ37.42566$J91.2123991@bgtnsc06-news.ops.worldnet.att.net>

Can someone recommend a good hand held receiver for the ham HF frequencies?
It would obviously need USB & LSB as well as excellent selectivity and
filtering for getting rid of nearby QRM.

Or am I just dreaming?

Thanks,

John

John,

Out of all of the hand held receivers/scanners I have personally owned (about 15), the best I have used for HF frequencies have been the Yupi 9000, Yupi 7100, and AOR AR8000. See the reviews on strongsignals.net. The Yupi 7100 is the least expensive ($290 at Javiation).

Someone emailed me the answer; check the AES online catalog. The
next-to-last PDF should cave cases by The Pouch. You're looking for
DTX. I ordered mine today for $17.99, and it looks like just what I
was wanting. Presumably. it'll have enough stretch to allow for my
MFJ speaker/mic's plug. Either way, it should keep me from scratching
up the faceplate any more.

678. Re: ic756pro, ts-2000 or 746

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-13 23:08:03 UTC
From: W6DKN <w6dkn@qsl.net>
Message-ID: <995065653.358656@ns1.gct21.net>
Source record: 57282

Hi Doug,

Well, here goes... I bought a 756 Pro about 6 weeks ago, after having run a Yaesu FT-920 (with the Inrad filter mods) for about 3 years. Prior to the FT-920, I ran a Kenwood TS-850s/AT (with the Kenwood DSP unit) for about 3 years.

I pondered long and hard between the Ft-1000 MP Mk V and the 756 Pro. I read all of the comments from owners of both rigs on the newsgroups, as well as all of the reviews I could find on the web. Additionally, I obtained and compared the ARRL extended lab reports for both rigs. (I never considered the Kenwood TS-2000, basically because it is the ugliest rig I have ever seen. No matter how well it performs, I didn't want to have to look at it every day :>) .

In comparing the lab reports, there were areas where the MK V was superior, and there were areas where the Pro was better. Overall, they were pretty close, usually within a couple of db one way or another in most of the specifications.

My primary use for this rig is for HF SSB. I run about 80 percent SSB and maybe 20 percent CW. I am not a serious contester but I do like to work DX when the bands permit. Also, I enjoy 6 meter SSB operation, so this was also a factor in making my decision.

After having used the Pro for the last several weeks, I can say with out a doubt it is the best rig I have ever owned. The implementation of the 32 bit IF DSP and the flexibility of being able to shape the filtering to the signal at hand "on the fly" is superb. The noise reduction ability of the DSP is excellent, much better than either the Yaesu 920, the Kenwood DSP, or either my Timewave DSP 59+ or my Timewave 599ZX. With the Pro, even heavy noise reduction settings do not alter the audio quality of the received signal greatly.

The strong signal handling ability of the Pro is vastly superior to may FT-920. I can work an S-0 station with a 5-9 signal just 300-400 hz outside of my filter passband, and the big signal is gone. On the FT-920, even with the Inrad filters, the "blow by" would totally wipe out the weaker signal.

As for weak signal reception, the Pro is very good. Although my FT-920 could also hear an S-0 signal I could never quite make out what the person was saying, I just knew someone was "in there". With the Pro, I have no problem at all working stations that do not even move the S meter. The Pro is the quietest receiver I have ever owned. (At first, I would find myself checking the antenna switch often to make sure that I had selected the right antenna because the rig was so quiet :>)

I should also note that the band scope on the Pro is great, it will show signals too weak to move the S meter, and saves a lot of hassle tuning up and down the band searching for stations to work. I just tune the rig to the center of the band, set the band scope to look 100 khz up and down from my frequency, and then just sit back and watch for a station to pop up on the scope. I can tell the frequency and signal strength of the station by it's display on the scope, and I can even tell the difference between a "tuner upper" and a QSO by the shape of the signal on the scope.

As for transmit quality, I have received nothing but compliments on the Pro's audio. There are 3 selectable transmit bandwidths as well as EQ for the mike audio. I have tried it with several different mikes, including the Heil Goldline, but find that the stock hand mike has the best audio quality and drives the rig better than any of the other mikes I have tried.

Overall, the Pro has got to be the most "feature rich" rig on the market, and these features are real, usable things that you will use on a daily basis. To the nitpicking specification worshiper the Mark V is the better rig on paper, but in actual use the Pro can hold it's own just fine (I had a borrowed Mark V side by side with the Pro for 2 weeks). As for value, the Pro wins hands down. To make the Mark V somewhat comparable to the Pro feature wise you would need to spend another $1000.00 for filters and another $800.00 for the 6 meter transverter and you still would be missing some of the Pro's features.

Again, I am looking at these rigs from a predominantly SSB operator, and a casual DX'er. If I was a die hard DX'er or a CW operator, with a multi kilobuck antenna array and an unlimited budget I would go for the Mark V. But for ham with a typical antenna system and budget, the cost, features, and overall performance of the 756 Pro are hard to beat.

Hello Dan,
That was a very practical approach and criteria you set for evaluating the 756 Pro. I really enjoyed the text of your message. I thought the most interesting remark was how well the hand mic worked for you. I used the hand mic with my new TS450S about 6 years ago for some time and too got the proverbial " great audio " reports. A few even asked what mic I was using. Since I have a personal preference for Astatic mics I almost always these days use a D-104. Thanks for a nice read....

One last thing..do you know my good friend and DX mentor N6KZ (Jim) also in Lancaster,CA? He was a guest operator here at my station just last week....

That's all well and good, and I agree that there are a few rigs I would like to see produced also - like a high quality 220 band all mode base radio. However, I would rather go without, than to have the market flooded with cheap, dirty rigs like the RCI just to cover a piece of spectrum at a low price. All this would succeed in doing would be to pollute the bands with crappy sounding, spur laden, wide banded signals.

I would rather save up for a while and pay the price for quality. In the long run it is money well spent. As the old saying goes " You get what you pay for..."

Check out my latest ham radio song parody of Christina Aguilera's
"Genie In A Bottle" called "HF's A Genie In A Bottle".

And be sure to check out "CQ Baby One More Time", my parody of "Baby
One More Time" by Britney Spears.

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

Hi PD:

Could use Excel for logging and then a 3rd party spreadsheet
viewer for the PP. Excel is very fast for dupe checking and maintaining
a "scorecard" for countries worked, states worked, etc.
In fact, maybe you don't need the whole log in your PP, just
the scorecard?

Many of the commercial logging programs are great - but they
have to satisfy a wide audience which increases menu complexity
and learning curves. Excel can get it done and you can always
save the data in tab delimited format for migration to
anything else later.

Howdy Glen,
A company called CONNECT SYSTEMS INC. does, or used to make such a unit. The one I used (still have here) is the model CS700. You dial in a short dtmf code to hear dial-tone and then dial out.....when a call comes into it, you hear (optionally) a ring-out signal over the air and with the same dtmf code you answer the call....this is where it gets a little different. There's a couple of different possibilities for who gets to control the conversation....either the land-line side, which works well but could be a problem if they didn't hang up or started a rant on you......and radio side control which is a uniform switching back and forth until one party talks and then it slows to long switch overs (a little disconcerting to some land-line callers if they notice the slight kerchunking). This latter way at least gives you (the radio side) the ability to grab control or to disconnect if something goes wrong. With "many" people who actually DO listen and THEN talk, the simplex patch works very naturally......with "the rest" of our society who insist on talking when you do...it works poorly (just like a duplex patch to a simplex radio anyway....no different). On this particular unit it has a programmable morse ident, 9 number speed call, redial and programmable lock-out for long-distance etc. Another feature is an aux relay function which is dtmf controlled by the mobile...could be used for switching antennas, power etc. Probably lots more sophistocated units out there today but this is one I used with a small business once. One thing we used to also do was to call-forward our day-time number to the remote base using this patch for a 24H service function....no seperate numbers needed if several mobiles were to maintain watch. (Simplex remote base can be fun here though....as it can hear mobiles that can't hear each other - used to use a simplex repeater in conjunction with this - LOTS of fun). Best of luck.

Glen....Just in case you might be wondering why anyone would use a simplex remote-base, my reasons, for commercial use, were licensing requirements and COST, equipment COST, equipment efficiency (no duplexer loss and maintenance concerns). I thought it might be the best bang for the buck at the time....

Gord

703. Re: ic756pro, ts-2000 or 746

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-14 12:42:40 UTC

Source record: 57209

My comments on the 756PRO are on the same line as W6DKN. It's the best rig I've ever owned for all around use. Like W6DKN, I work SSB & CW, and the rig is great. I purchased the rig in Sept. 2000 and two days later sold my Kenwood TS-950SD. The 950 is a great radio, but the 756PRO makes my hamming enjoyable even more. As for the mic, I like my SM-20.. I've tried the Heil Pro series, SM-6, and my D-104, but the SM-20 is best for me. It's smoother and the VOX works great with it. As W6DKN states, the spec. on the 1000 MK 5 might be a couple of db's in some departments, but the overall USER FRIENDLY 756PRO is hard to beat.

Good luck with your purchase.

Off the top of my head, I'd say to look around for a good deal on used equipment. Everything I use is used or homemade (antennas and the like). Of course, others will probably make better, more specific suggestions. I came across an unused Radio Shack CB with AM & SSB that I'd like to modify for 10m. (I feel kinda... dirty... saying the words "modify" and "10 meters" in the same conversation, though;{) It was apparently a $250-$300 radio new but RatShack doesn't sell 'em any more and I don't know the mod. Good luck to you and, if you do buy used, make sure it's someone you trust, paid with a money order, or from a store reseller.

I sent this to the antenna "gang" and they told me to come to this board with my question.

I know this doesn't pertain to antennas, but I don't know if there is any forum to go for the information I am seeking. If there is let me know. I belong to the Silver Springs Radio Club in Ocala, Florida and we are thinking of building new fixtures in the club station for 6 to 8 operating positions. We have the capibility for operating all modes and bands. I just needs some ideas on some layouts. If anyone has some ideas or pictures of some nice setups, or has any questions, you can cantact me at my e-mail address I would appriciate the come back and thanks in advance.

Consider waiting for the IC756 Pro II. It's available in Japan now.

See below info from Japan.

Alan
W4NCQ

From: "Aaron Camp" <aaron_camp@icom.co.jp>

Thank you for your mail, and thank you for your interest in ICOM products.

The new IC-756PRO2 is a completely new product, despite the similar
appearance to the 756PRO.

The following improvements have been made.
1. Sharp and soft IF filter shape are
independently selectable for SSB
and CW

2. Improved 3rd IMD characteristics
and wide dynamic range

3. One-touch record/play switch on the
front panel

4. Digital voice memory with external
control capability

5. Extended 1/4 tuning step function
and BPF function for SSB-D mode

6. Variable level setting noise blanker

7. SSB/CW synchronous tuning

8. 4.9-inch color TFT LCD with new color settings

The 756PRO2 cannot be upgraded to the new type.

Finally, no definite dates for export have been made yet, so we suggest that
you stay in touch with your dealer or keep an eye on the Internet for
release dates.

Again, thank you for your mail.

Best Regards,
ICOM Support Center

714. HF Amplifier help/question please.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-14 17:07:10 UTC
From: kg4ggx@aol.com
Message-ID: <20010714130710.07795.00003475@ng-cs1.aol.com>
Source record: 57217

Hello all
I purchased a FL-2100B amp in 9 or better condition. It's very clean inside and out, and still has the plastic on the face, and not even a scratch on it.Only a very very light dust internaly. It appears to have been used very little. I have the original box and the manual.
I checked the ac wiring to make sure it was wired correctly before attempting to turn it on. Connected it to my grounding bus, and coax in and out to my rig and antenna, and a 20 amp 120 v circiut. And of coarse the keying line and ALC line. Turned it on and let it run(of coarse not transmitting) a few hours befor attempting to tune it up. Tuned it according to the manual starting with low power into a load of about 1.5 to1swr.At first it had a high value of swr on the input. After trying to tune a few times on different frequencies on 75 meters the input was ok.1.5 or less. I may have been doing something wrong. Anyway it tuned with the load at 0, or fully meshed.Seemed to transmitt ok got good signal reports. The manual says it should tune for max output at .5 amp on the plate with 100 watts drive. It never went any higher than .4 amp with a 100 watt carrier, not .5 as it should be.. And on ssb it ran between .2 and .3 somtimes peaking a little over .3, wich is in line with the manual on ssb.I tried it on 20 and 40 last night and it tuned near what the manual says on the plate and load. Today it tunes 80 40 and 20 with the load on 0. I don't think this is normal. It's on an antenna that has a swr of 1.5 or less on each of these bands. I don't have much experience with amplifiers, and I'm not sure I'm tuning it correctly. The manual says to start with .2 amp plate current, dip the plate, then says to alternately adjust the plate and load while increasing power input in small increment until max output occurs at .5 amp plate current. I assume that means to alternately dip the plate current with the plate and load adjustment. The plate voltage is correct at 2400 and drops to 2100 on transmit.
Am I tuning correctly? If the load adjustment is always dipped at 0 where is the problem likely to be? I don't have an external power meter in line so I 'm not sure of the output power. Last night when it tuned close to the manual recommendations on 40 and 20, it did show about .5 amps on the plate. Thanks for any help.Sorry so long.

Hi!

Just wanted to thank W6DKN and KI4PS for their input....You know, I CAN look past the unorthodox looks of the TS-2000, but....it's still not enough. Whatever anyone says about the 756pro, pro or con, the consensus seems to be that we are talking about a hot, HOT receiver, quiet and powerful. THAT is the bottom line for me. I've made my decision, 'nuff said. Now, the only thing that causes me some anxiety-hi- is the mention of the proII out sometime(?) in the near future. Even if one did not immediately get the latest and greatest pro, you KNOW they'll knock the price down on the original pro. Maddening, no?

W6DKN--hey, really appreciate the breakdown of the features and the various comparisons between the pro/920/1000series, etc. Helped cement my decision. Honestly, have you considered contributing any reviews for publication? It's always nice to hear comparisons from the user's perspective. Thanks, again.

73's Doug N0HQN

716. Public Safety radio: the P25 digital debate

P25 debate: The digital standard revisited
By Bernie Olson
Mobile Radio Technology, Jul 1, 2001

Editor's note: MRT's April 2001 article, ï¿½Does the Digital Radio Standard
Come Up Short?ï¿½ by Stephen Bartlett, drew strong response from the
standards-creation community. A critique and technical assessment of the

article has been prepared on behalf of P25 proponents by Bernie Olson,
chairman of the Telecommunications Industry Association TR8.18
Committee on Compatibility and Interference. Following his analysis, we
also present a further clarification by author Bartlett of his position.

The article ï¿½Does the Digital Radio Standard Come Up Short?ï¿½ does a gross
disservice to Project 25. Although there are some good technical
descriptions of each modulation, the author's comparison uses different
performance criteria for the three modulations.

He then compounds the issue by using free-space propagation loss for a
range comparison. Free-space loss is only valid for point-to-point paths

where 0.6 of a Fresnel zone clearance is provided. In the land-mobile
environment, this is commonly not the case. Therefore, the propagation
power-loss exponent is closer to four than the free-space value of two, as
used in the author's comparison. This use of different performance criteria
and an extremely liberal propagation loss model has resulted in a distorted
conclusion that cannot be supported in an actual land-mobile radio
environment.

The flawed methodology used by the author is further aggravated by the
use of information from different sources. The author did not acknowledge
any disparity among the various reference levels, specifications or derived
values from the different sources. Tables 1 and 2 on page 20 clearly show
the difference between the assumptions used by the author and those
embodied in TIA-TSB88-A. The first table shows the relative coverage
range differences based on the criteria values from ï¿½TIA/EIA
Telecommunications Systems Bulletin TSB88-A, June 1999.ï¿½ These values

are based on a propagation power-loss exponent of 4, more typical of land-mobile communications. The derivation of these values is presented later. The second table is extracted from the author's chart. The receiver
IF bandwidth is indicated for the different scenarios.

The results in Table 1 are dramatically different from the author's conclusion chart (Table 2).

The author bases his range arguments on basic carrier-to-noise criteria derived from various references. However, when the author calculates C/N

from receiver bandwidth and published receiver threshold ï¿½specï¿½ data, he

fails to account for receiver noise figure. One could leave receiver noise
figure out of the picture and reference all performance to the receiver (demodulator) input, as the author attempts to do. This can, and does, distort the results unless a common noise figure reference is used.

Two receiver sensitivities (static and faded) are given in TIA-102 publications. The static sensitivity is used to make laboratory or bench

measurements. For analog radios, this benchmark is 12dB SINAD. For digital radios, this benchmark is 5% bit-error rate. Static sensitivity is not
used in predicting coverage or range. It is used to ensure that the receivers have a published performance specification that customers can measure and use to compare receivers from different vendors. This is the

receiver sensitivity value that normally appears on manufacturer's specification sheets.

The TSB88-A, TIA102.CAAA and TIA102.CAAB documents also include faded sensitivity values. There is no analog faded sensitivity standard, but
the median of the values used by various system designers is 13dB above the 12dB SINAD value for performance. For digital radios, the typical value
to achieve 5% BER in faded conditions is 6dB to 8dB above the 5% BER static sensitivity level. However, 5% BER in a faded environment is insufficient to produce acceptable audio. A lower BER is required to achieve
acceptable audio quality levels, with 2.6% BER being considered the minimum design level for Project 25 digital radios using the IMBE vocoder.

Different scenarios

The author apparently used pieces of different specifications but failed to
recognize the different scenarios these values are intended to represent.

Also, many of the values cited for C/N are referenced relative to the receiver's ï¿½thermal noise threshold,ï¿½ which is the sum of the receiver's

noise figure and the thermal noise-floor level based on receiver bandwidth.
It appears the author assumes that the reference is just to the thermal noise-floor level.

For example, in one reference the author cited the TIA102.CAAB performance recommendation, which refers to a static reference sensitivity of -116dBm at 5% BER. This value is correct. However, the author failed to include the noise figure of the receiver in his analysis. For example, a noise figure of 10dB would result in a required C/N figure of 10.4dB [-116dBm static sensitivity -(-136.4dBm thermal noise floor at 5.76kHz IF bandwidth +10dB noise figure)]. This figure is much closer to the 7.6dB value as shown in Table 3 on page 24. Furthermore, when one considers that TIA's specification is a ï¿½minimumï¿½ value and that manufacturers' equipment typically exceeds that figure by 2dB to 3dB or more, the Table 3 C/N value is confirmed.

In another example, the information from the government Web site referred to by the author is accurate, but the author's interpretation is incorrect. The -121.4dBm level measured is for static sensitivity at 5% BER that occurs at 7.6dB C/N. This calculates to a receiver thermal noise floor of -129dBm, implying a receiver noise figure of 7.4dB (-129- (-136.4)). The published static sensitivity for that receiver is -119dBm, so that particular receiver exceeded the manufacturer's published specifications by about 2.5dB.

The author also misconstrued manufacturer's data. The level that was referenced (14dB) refers to the faded 5% BER, which is specified in TIA102.CAAB as being 8dB more severe than static conditions. Properly represented, this material would produce a calculated faded C/N of 15.6dB (8+7.6) relative to the receiver's thermal-noise threshold. However, these should accurately be portrayed as ï¿½minimumï¿½ values, even though typical measured values are between 6dB and 8dB. That brings the manufacturer's value of 14dB into the expected range.

We cannot support the author's value of 6dB for analog FM. It lies somewhere between a static 12dB and 20dB SINAD. Under static conditions, it could be argued that this is a reasonable value. However, it would not be a representative value under faded conditions that delivers acceptable audio quality to the user. As indicated in Table 3, the recommended faded C/N value is 17dB, an 11dB difference before adjusting for filter bandwidth differences.

We are particularly disturbed that only anecdotal evidence was presented claiming lower range from Project 25 C4FM, while range was represented as an absolute derived from empirical data. Many narrow bandwidth digital systems have been installed, and coverage

is always greater than analog unless there is interference present*.

Published industry reference

We would encourage you to review the correct criteria values when making

your own assessments. Those values are located and published in ï¿½TIA/EIA

Telecommunications Systems Bulletin TSB88-A, June 1999.ï¿½ TSB88-A is a technical reference document developed in conjunction with the entire suite
of Project 25 documents by a committee representing vendors, users, frequency coordinators and regulators. It was developed to provide frequency coordinators with the necessary information to determine frequency reuse as well as with a methodology for determining coverage range in the presence of co-channel and adjacent-channel interference. In
that context, this information allows for the use of computer programs to
evaluate potential frequency selections and to maximize coverage range while minimizing interference.

Because different digital modulations have different performance characteristics, a range of channel performances was developed, loosely based on the ï¿½circuit meritï¿½ definitions used for analog system evaluation.
The definition is described as delivered audio quality and refers to:

How easy or difficult it is to understand the intelligibility of a signal.
Whether or not part of the audio is missing, requiring the message to be repeated, and if so, how frequently.
What the detractors are, e.g., noise for analog or artifacts (distortions) for digital.

New systems are designed for a minimum DAQ of 3.0. A DAQ 2.0 is considered to be difficult to listen to, requiring considerable effort and
frequent repetition for understanding. The higher DAQ values are defined

for higher performance levels. They are defined as equivalent intelligibility
to static SINAD values, but in the presence of Rayleigh fading (multipath),
as experienced in actual usage.

Table 3, extracted from TSB88-A, shows the values for reference sensitivity (static C/N ratios) and the faded carrier to interference plus
noise ratios, (Cf/(I + N)) for various DAQ values. The interference component, I, is included because interference is considered to be another
detracting noise source.

It is important that a user or system engineer recognize that static conditions are only valid for bench measurements and are a way of comparing performance of individual units. By subtracting the Cs/N, the ï¿½noise floorï¿½ of the receiver can be determined. The Cf/(I + N) then determines the signal level required in the presence of fading and other

potential detractors.

For example, analog 12dB SINAD Cs/N is 4dB. If a manufacturer's published static receiver sensitivity is -119dBm, then the receiver's ï¿½thermal noise thresholdï¿½ would be at -123dBm. If faded analog DAQ 3.0 Cf/N is 17dB, then the faded signal level for system design would be -106dBm (-123dBm thermal noise threshold +17dB Cf/N).

The width of the IF filter also needs to be considered. Wider IF bandwidths
produce less distortion and better channel performance at lower Cf/N. However, this comes with a price because wider IF bandwidths are more susceptible to adjacent-channel interference and result in higher thermal
noise powers in the receiver.

The author selected 14dB for C4FM (equivalent to a DAQ 2.0 [in fading]),

the static value (7dB) for ?/4 DQPSK and a static value (6dB) somewhere between 12dB SINAD and 20dB quieting for analog FM. It is difficult to conceive how three disparate criteria could be used to arrive at a uniform
and accurate conclusion.

Comparing digital modulations

As can be seen from Table 3, compatible four-level FM (C4FM) shows slightly degraded performance when compared to ?/4 DQPSK, yet both have better performance than analog FM, particularly at higher Cf/N values.

As stated earlier, one should use a constant receiver noise figure reference. For the Table 1 analysis, the values were calculated assuming

the same noise figure for all receivers. The comparison then becomes a simple matter of determining the difference due to bandwidth and the difference required for DAQ 3 and then calculating the relative ranges using a power exponent of 4.

The differences between noise power of various IF bandwidths are indicated in Table 4 on page 28.

The difference in faded C/N between analog FM (17dB) ï¿½ digital C4FM (16.5dB) = 0.5dB. (0.5dB + 3.44dB for the difference in the required receiver IF filter bandwidth = 3.94dB.)

The range difference using analog FM as the reference is:

The difference using ?/4 DQPSK is

Taking the absolute best case where the ?/4 DQPSK uses a 5.7kHz ENBW filter would produce a 1.35:1 ratio, an 8% increase over C4FM, but at the price of a non-compatible over-the-air interface.

The author discussed the distortion effects of transmitter filtering on the modulation. Typical ?/4 DQPSK implementations use a raised cosine pulse shape with the pulse-shaping split between the transmitter and the receiver. This technique, called matched filter, can be shown to result in theoretically optimum sensitivity under Gaussian noise. Part of the Project 25 deliberations was matched filters vs. pulse shaping. Project 25 decided not to select a matched filter system but rather to concentrate all the pulse shaping in the transmitter. Doing this makes the modulation compatible with linear and constant envelope (FM) transmitters and receivers. A slight loss of sensitivity exists compared to ?/4 DQPSK. However, the selected modulations, C4FM and linear CQPSK, are compatible in a Project 25 receiver. Thus. the receiver does not care if the signal is modulated with C4FM or linear CQPSK. This allows a 12.5kHz channel bandwidth transmitter using C4FM modulation to communicate directly (over the air)

with a 6.25kHz channel bandwidth receiver as long as the center frequencies are aligned. This creates a migration path to narrowband 6.25kHz channel systems. This migration path was encouraged and endorsed by the Project 25 user community.

Some of the author's comments about how digital technology degrades over-the-air-performance need to be considered and put in the correct context. Digital Project 25 radios have significantly greater range than

analog radios for systems designed for DAQ 3.0 or above. At the fringe of coverage (below signal levels normally used for system design), digital begins to break down at a faded BER of about 8%. This is in the general range of 12dB to 14dB Cf/N. At these weak signal levels analog would still be understandable (with great effort) while the digital radio would mute.

However, migration to narrowband analog FM does not improve this situation. Analog FM doesn't perform as well in narrowband channels as it does in 25kHz channels. If narrowband analog is deployed, there is a 6dB

degradation in performance from reduced deviation coupled with a 3dB improvement in receiver noise performance due to the narrower IF filter,

resulting in a 3dB overall degradation. High-signal performance is reduced
and a high SINAD cannot be achieved because some FM sideband information is lost passing through the narrow IF filter. Also, narrowband
analog becomes more susceptible to noise pops, giving up the advantage that normal analog FM enjoys.

*Interference has been increasingly evident in portions of the 800MHz band where nearby cellular/SMR deployments create coverage holes due to their high signal levels where the desired signal is relatively lower. Both
digital and analog systems are affected, but digital systems will mute while
analog systems may provide audible clues to a user. The absence of audible clues is frequently reported as a range problem. This topic was the
cover story in MRT's March 2001 Issue, ï¿½Why can't we talk? It's the interference.ï¿½ Visit www.apco911.org for a copy of the Best Practices Guide
described therein.

Muting thresholds: Stephen Bartlett's response

I appreciate Mr. Olson taking the time to offer his perspective on my article
ï¿½Does the Digital Radio Standard Come up Short?ï¿½ (April 2001, MRT), and

his candor in pointing out several key issues he had with it.

I wish to clarify to Mr. Olson, and the mobile radio community, a misunderstanding about what my article was reporting. The study I described wasn't about the added range of audio quality that the P25 digital
design achieves, but rather a discussion of the differences between the narrowband digital and wideband analog FM systems at the edge of radio coverage, or in other low signal-to-noise environments. As Mr. Olson pointed out, systems are not typically engineered for these fringe areas.
However, it is under these conditions that radios will either mute or not,
making coverage differences especially noticeable. The focus of my article
was on how these different muting thresholds affect absolute range.

Mr. Olson is justified in suggesting the use of the number 4 for the power-law exponent describing the path-length dependency, in deference to the ï¿½extremely liberalï¿½ exponent of 2 that I chose. His figure reflects
good engineering practice when designing mobile systems. It also reduces

the scale of any range difference ratio.

He was correct to point out my not mentioning the receiver noise figure (NF) in the overall noise power (Pn) calculation. The correct formula is

actually (neglecting interference):

For the analysis, I defined all receivers with equal and ideal NFs, but neglected to clarify this point. Where I erred was in assuming the manufacturer's specifications, and other measured data I used to compare

with the 4-FSK model, did the same. Many published specifications don't clearly state whether their data are static Cs/N, faded Cf/N or if the receiver noise figures have been removed, included or normalized in their
published values.

Muting thresholds will affect the coverage of the mobile radio system. Comparing these thresholds is the challenge. In his article, Mr. Olson stated that using a faded channel (Rayleigh fading) Cf/N ratio is more appropriate for modeling system performances than static Cs/N ratios. He

also mentioned that no analog fading sensitivity standard exists, and he

further recommended a faded value of 17dB for FM systems. This may be appropriate for determining a DAQ of 3.0, but not for a threshold mute. There are references showing critical wideband FM receiver thresholds are
actually closer to 10dB; less with threshold extension (Rappaport, Wireless
Communications). For digital systems, the mute threshold is defined by the
critical bit-error rate where data cease to be reliably detected and vocoders to operate. It was good of Mr. Olson to recommend using the more realistic 2.6% BER threshold value for the IMBE vocoder to deliver more accepted audio in a faded channel. However, because of the focus of

my article, I chose the 5% BER value as the digital mute threshold.

For a more complete approach in determining the expected faded channel performance for the digital systems, refer to J. Proakis' book Digital Communications, Fourth Edition, where the ideal theoretical performances

of many common digital modulation schemes in a Rayleigh faded channel are derived. In such a channel, the error rates vary inversely with signal to
noise ï¿½ unlike static exponential error behavior. In the case of binary,

noncoherent, orthogonal FSK modulation, a Cf/N value can be found directly from the probability of error (Pb) using the Rayleigh channel formula: Cf/N (dB); 10log (1/Pb). We can use this equation to calculate the
Cf/N performance for any FSK signal at 5% BER. Orthogonal binary FSK and 4-FSK channels will perform nearly identical except at low Cf/N. Therefore we can use the Rayleigh formula to estimate C4FM's average departure from ideal performance in weak signals due primarily to its

nonorthogonal four-level modulation.

Mr. Olson reported that in the faded channel, C4FM will break down in the
fringe areas with 8% BER at a Cf/N of 12dB to 14dB. The Rayleigh channel

formula predicts the ideal binary FSK Cf/N value at 8% BER to be 11dB.
Thus, Mr. Olson's 8% BER value shows that C4FM has from 1dB to 3dB of
degradation (2dB average) from ideal. From this, we can determine the
optimal Cf/N mute threshold for C4FM modulation at 5% BER:

Using this optimal C4FM mute threshold of 15dB, the referenced wideband
FM mute threshold of 10dB, and the bandwidth adjustment of 3.44dB, an
absolute range difference between the digital C4FM and wideband FM
analog systems can be calculated, using the equation recommended by Mr.
Olson:

This 0.91 value shows a potential loss of absolute range between the
C4FM
digital and wideband FM analog systems, due to their different muting
thresholds. Realistically, in the unpredictable faded channel with the
parameters of analog and digital modulation being so different, there
may
be a variety of cases where either system may outperform the other,
perform nearly the same or vacillate between these extremes ï¿½ especially

in fringe areas where muting occurs. It is in the best interest of the
community to know how these digital narrowband systems perform in a
variety of locations and scenarios as they become more widely
implemented. If problems can be predicted early, they can be mitigated
early.ï¿½ S. Bartlett

Hello there, thought the 940 was sold, but looks like it isn't. It's in very good condition (except for the manual, well used, but still available new from Kenwood for $13.00 part # B50-8001-30). Also has a small hole on the back screen where someone had an attachment hooked on, but is not very noticeable. Has the AM and SSB filters, and WAY too many other features to list. Radio, hand mic, and manual for $800.00 plus shipping. I also accept Paypal for payments. Please feel free to check my feedback on ebay, username gr8rdayz. I have 100 Positives, and NO negatives.

Take Care, Ken.

Given the option to purchase either the Yaesu FT-100D/ATAS or the ICOM IC-706MkIIG/AT180, which would you choose?

Why?

Thanks,
Turner

Hi, Everybody,

Was the Johnson Matchbox design purchased by Nye Viking some time back?
I have seen a black Nye Viking tuner that looks exactly (electrically)
like the Matchbox, SWR meter and all, and I was wondering in
approximately what year that occurred?

Thank you,

Al W6LX

I have an Icom IC-03AT for sale. It is in good condition and includes
the radio, antenna, BC-25U battery charger, a photocopy of the manual,
and a BP-03 battery.

The radio works well and has basicly been replaced by and IC-3SAT and
an IC-38A so the 03AT is surplus to my needs.

Here is a picture: http://www.eskimo.com/~ghopper/ic03at.jpg

I would like to get $135.00 plus shipping but will consider reasonable
offers.

I have a 2 meter amp for sale. It is new-in-box as I never got around to using it. It was made for Radio Shack and by all accounts was a good amp and did a superior job of rejecting intermod due to its good receive filter (that's why I bought it). It has all the mounting hardware, etc.

Specs are 1-5 watts in 30 watts out, has receive preamp.

Here's a picture: http://www.eskimo.com/~ghopper/2Mamp.jpg

I'd like $55.00 plus shipping but will consider offers.

I'm cleaning out the shack in preparation for a remodeling project.

I have a Mirage C-22A amp that I was using with my old IC-03AT. The amp is clean and works fine.

The specs: receive preamp has 10db gain with .5db noise figure. Freq. range 220-225 Mhz, Power input 0.1 to 5 watts max, output "20 watts or more with 2 watt input and intermittent duty cycle". The unit worked very well, but is surplus to my needs now that I have a 38A.

I'd like $75.00 plus shipping for the amp but, I will consider reasonable offers and trades.

Stop thinking NEW, and you'll find something. In that range there are very few all band/all mode solid state rigs around. You might find a used 10m rig in that range, like a Realistic or Ranger, but your don't get much for your $$$.

Consider an all band, 100W, CW-SSB rig (no WARC, just 10-15-20-40-80 and maybe 160) tube rig like the Kenwood TS520. I've seen TS120's and TS130's for sale in that range, too.

Send private email if you want to know more or have specific questions.

Source record: 57241

I have the icom 706mk2g and I too had to make this difficult choice except I also looked at the ft847 and the ic746, the reason I didnt buy the FT100 is that I looked at one and I didnt like the way the ariel leads come out of the rig on 2 bits of coax I much prefer the way the icom has the sockets fixed to the chassis, I could see that the fly leads on the FT100 may cause problems as the rig got old.
If I had wanted to pay a few more pounds however I would have gone for the IC746 it has much better receive audio than the 706, I have in part reolved this by add the SP21 speaker which gives much improved audio on SSB but I am not sure it is worth the outlay, also of course the IC746 doesnt have 70cms and I totally ruled out a FT847 after reading loads of adverse reviews on it also it is too expensive.
I can't comment on the ATU as I dont have one.
After taking everything into consideration I really like my 706 but I would still consider the IC746 if I am ever in the position to afford it because as well as the improved audio it it has all the functions on seperate buttons where with the 706 you are forever scrolling through menus and using multifunction buttons. It really depends on what you want it for, i.e. homebase or mobile, and how much money you want to spend.
Hope this help.

Greetings Turner!

I have both radios, and I like them both. I personally favor the IC-706, but that's mostly because I have had a 706 for several years (I had the original 706 when it first came out). I now have the 706 mkII G. My Ft-100 is not the "D" model, but there's not much difference. The two (706 & 100) are almost identical in performance. I do HF digital a lot, and the FT-100 seems to do better using AFSK. The 706 doesn't do too well using AFSK, but I think it would be OK using true FSK. I don't like the pigtail connectors for the FT-100, as I know I'll wear them out over the years. The 706 has solid connectors on the back frame. If you plan to use a linear amp, the FT-100 has a linear amp switch directly on the back, but the 706 has to be configured with an additional adapter to do the switching. The 706 seems to be a bit more sturdy radio. I've taken both my radios overseas to operate mobile, and the FT-100 front panel was easily broken. Also, if remoting the front panel, the FT-100 microphone plugs into the main body of the radio, meaning you can't remote the FT-100 very far away (only as far as the mic cable will reach). The 706 mic plugs into the detachable front panel, meaning the main body can be remoted a long ways away (I have a remote cable for mounting the 706 frame in the car trunk). All-in-all, both radios are great, and almost identical in performance. I have my FT-100 now configured as my base radio, and the 706 I use for mobile operating. Hope that helps a little bit. I've put both through their paces and have learned their ideosyncracies. If you need any further info or suggestions, drop me a line.

Thanks.
Jeff.
brenchef3@aol.com
P.S., I looked at buying the ATAS system, but read a lot of postings that didn't have good things to say about it. I opted for a separate brand antenna tuner (I think its the SGC-237) because it was cheaper and works with any brand radio. No complaints. If you're going to use a 706 in the car, the ATH-4(?) is the tuner you want. The AT-180 is for balanced system and I think will not tune any SWR worse than 3 to 1. Check on the stats before buying. The ATH-4 is for long wire (I think).

MFJ makes a bunch of single band 20-watt ssb rigs in that price range -- there's one for 10 meters. Check their web site.

But I suspect you'd be much happier with a used all-band hf rig with 100 watts out. Check some of the auction sites such as http://listings.ebay.com/aw/listings/list/all/category4670/index.html

If you go brand new in the 2-300 dollar price range, you're going to get something that is awfully limited... and there's really not much selection. MFJ, Radio Shack, plus some of the creepy CB "roger-beep" suppliers, of whom I'd stay a mile away.

You might also check the Ten Tec web site, and ask for their list of used, reconditioned rigs. They might have something affordable, and it'd be a damn sight better than a brand new $250 wonder whatever...

(Or, you could look at the Ten-Tec Scout -- I believe it's $500 or so.)

Steve.....don't confuse my humorous aside with genuine concern. It's
not terribly important to me what a rig looks like--performance IS
key. I was simply ribbing W6DKN a little for his remark in his
extremely helpful original response to my question, which started this
thread..Hey, I think bulldogs are cute! n0hqn

I have to disagree with the above statement. A 20 foot extension
mike cable comes with the separation kit. In fact, that's one of
the things I like best about the FT-100D - no mike cable dangling
from the front panel. I have my main chassis under the passenger
seat and the mike comes up from there. Much neater, IMO.

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

Hello.
I have an Antron 99 10/11m verticle antenna for sale. Comes with the optional ground plane kit. Asking $80 and I would prefer pickup from the Detroit area. Antenna works like a dream on 10m. Used several field days and it never let me down.
Asking: $80

It is replaced by a NTE 234 silicon transistor. This is the NTE
Crossreference data.
Industry Number : BF243
NTE Device Number: NTE234
T-PNP,SI LO NOISE HI GAIN PREAMP,TO-92
Hope this helps.

Murray:

You can read a write up on the CCD concept in Vol 2 of the ARRL Antenna Compendium, page 132.

In a nutshell, it is the opposite of the dipole shortened with loading inductors...it is a dipole lengthened using capacitors to compensate for the inductive reactance.

I saw an antenna said to have 5 db gain over a standard dipole, that had silver mica capacitors in it every few feet...is anyone aware of this and does it really work.? Thanks for any comments or ideas. PLease direct comment to me directly, and the groups if you like...interesting subject I thought...thanks Murray

Briefly, the CCD is a one-wavelength (physically) antenna electrically
shortened to 1/2-wavelength resonance with series caps. It afford some gain
- I don't recall how much, but would doubt 5 dBd - due to the added length
and the re-distribution of current in the wire.

One of the ARRL Antenna Compendia has a paper on it.

I compared PRO to the following radios

DRAKE TR7
FT102
DRAKE R4
AOR7030 PLUS
FT1000MP
TS830S
TS940S
Ten Tec Jupiter

Besides the scope and quite receiver its not a very good radio. The receiver suffers baldy from 2nd order IMD in 15 meters. It overloads on 40 meters when connected to a 2 element Yagi. For the Price its poor value. Copying signals in the noise with a quite receiver i can do that with $20 Direct Conversion receiver that sounds better than the PRO.
The PRO would be a superb radio if they improved the receiver performance, especially the 2 order IP. They should add good bandpass filter for each ham band or better still putt in an automatic tracking preselector. Protect the receiver for at least 100 Volts mine burned out from a minor electrical pulse. Considering that the Jupiter is one third of the price and in many aspects is equal to or better in specifications to the PRO. I think its the winner. With the spare change you can buy yourself a good Spectrum Analyser for accurate monitoring of the band. Now thats value for money. I sold my PRO and dont really miss it.
If you see what Signal One are doing with the PRO, you can see that even with all the extra work the receiver is still lousy even in Frankenstein form.

I can buy that antenna, new, with the ground plane kit for $64.99. It is a
good antenna, though.

Actually aside from the battery going south..... the radio is in almost
perfect order!!! If there is a scratch on it, that would surprise me. Just
need to figure out the steps involved in order to program it, set PL tones

etc... just like I do on my other HT and mobile rig. I am comfortable now with both my Icom HT and my Radio Shack mobile to the point I could operate the damned things blind. (except for knowing what frequency I would be on in VFO mode)

Ryan

Actually with the icom you can plug the mike in either place. So if
you didn't like the mike plugged into the front panel, you can run it
ala ft-100 style plugged into the back of the rig. Actually , you can
even run two mikes at the same time, but I think icom says not to do
it for some reason. I noticed no problems when I tried it here as a
test, but I don't normally do that. I'm not sure , but on some mike
wirings , if you keyed one mike, both elements could be hot unless the
element was switched. I use the front socket when mobile using the
hand mike, but I plug my desk mike into the back when at home. Avoids
cord clutter in front of the rig. MK

Don't rule out the ic-775. As far as pure radio is concerned, it
"might" be a tad better than the 756pro. I guess just depends on what
areas you want to optimize. The 746 is a lot of radio for the price.
In fact, I doubt there is much you would gain in real world use
spending more than the 746.The 756 more toys and blinky things.
Depends how hard core you want to get I guess. Mikes on the icoms? The
icoms mikes are ok. The heil gold line sounds pretty good. Don't know
about the EV, except the ones I tried in the past I didn't like. Too
pinchy a commercial audio sound. Kinda like a pilots mike with noise
cancelling. yuk...But that EV might be better. Myself? I use a audio
technica dynamic mike myself on the 706g. "Most all icoms have the
same mike requirements". Whats good on one, will usually be good on
the others. MK

Okay, let's take a look see....
>
>surface mount components.

i.e. You ain't gonna fix it at home..

>I did have to tighten up the microphone ring on the radio case.

good selling point.

>, radio does not have a speech processor.

>On AM and FM, transmit audio is ok.

just adequate?

> No PL tone on FM and no repeater offset function as well.

more features??

>The SSB receive filters are a bit wide

good filters are expensive.

> . Another nice feature is the combination of frequency counter and 1-40
channel knob.

All ham bands are conveniently handled by 40 channels.

>no slow AGC on SSB, but can compensate by turning back the RF gain?

okayyyyyyyyyy...

>>>CW transmit output tone sounds bad, has chirp.

Why did you give it 5 rating??

The Phrase alternatively adjust the Plate and Load controls does not
mean to dip the load control. It is best to have some means of
indicating the power output so you can adjust the load control for
maximum output while maintaining the plate dip with the plate tuning
control. Then repeat as drive power is adjusted upwards in increments
until you reach the 500mA dipped plate current with maximum output.
Some of the regulars here should be able to point you to articles on
how to tune a tube amplifier that should be helpful. The manuals are
usually too simplified or assume you already know how to do it.

Yes,
The intended use for those radio's are cb, forget the ones that
bonafide 10 meter hams use. Also I asked a while back for a mod
that would allow me to go out of band on FRS, it's ok, and I won't
tell on you for the information, we're hams.

Poor analogy. I would buy an ad in the Wall Street Journal to let everyone know that I have given radio to an auction house to be auctioned off on such a such date. Or, I would buy an ad to let everyone know that I have a radio at a consignment shop. I would NOT list on Yahoo Auctions that I have something on the Ebay Auction site, this would be more to your example.

Why do realtors advertise in the paper that a house is For Sale. That is exactly what you do when you post to a newsgroup that you have something for auction or for sale. If you don't want to read them, then filter them out. But others think they are worthwhile reading.

Rob:

We used to call that "tuning for maximum smoke"! It's actually the best way to tune the amp...keep increasing the load and peaking the tune for max output, while keeping an eye on the plate current. Keep it to 500 ma. Write down the settings for each band so you don't have to go through the whole procedure each time you change bands. BTW the 572B's in your amp are quite sturdy and will take a fair bit of abuse.

73,
Ron

Rob:

You can reduce power by simply reducing the power output from the exciter with only a small loss in overall efficiency, although "text-book" way is to re-tune after reducing the power. If you re-tune for the lower power and later decide to run full power, you will need to retune for the higher power level.

An excellent, although highly technical, discussion of amplifier theory and design can be found on the web site of Richard Measures, AG6K.

http://www.vcnet.com/measures/D.amplifiers.1.html

Elsewhere on the site, you can find lots of detail about various aspects of linear amplifiers.

Good luck!

Ron, N6AHA

Where did you see such a wild gain claim Murray? To have 5 dBd gain,
it would have to be a very large CCD antennna! I'm not sure you could
ever reach that gain without severe bandwidth and construction
problems.

Actually Aaron sounds like one of those Gun-Control
Wackos that wants to "throw laws" at everybody, but has no
consideration for the possible repercussions. So he winds
up doing little more than chasing a problem through another
loophole, and royally screws up all the regular folks.

They can't for one minute accept the idea that people who
make very wrong decisions are the problem, not every object
on Earth that could ever be misused in someone's wildest
nightmare.

Here's the simple logic of these people:

A) Freaks with nothing to lose lead cops on wild car chases.
B) Outlaw all the cars.

What next? Swimming pools, kitchen utensils, coat hangers
belts, socks, shoes, gas and electricity, all hand tools...
The list is endless.

Heard this on Jurassic Park:

A) God creates dinosaurs and man.
B) Dinosaurs eat man so God kills dinosaurs.
C) Man kills God and brings back dinosaurs.
D) Dinosaurs eat man... and Woman inherits the earth.

Go figure.

Not to Mention the poor transmitter poor 3rd order IMD. When analysed on the peak storage spectrum analyser i have seen samples that average -18 below pep. Real CB stuff here, not something you want to feed into linear amplifier.

Murray,
Yes, they do work. I seriously doubt the 5 db, though. They
are not height sensitive, will work on any frequency higher than
the design freq., and are a 'pure-bitch' to put together! The
other 'bad' point is that the mica caps' are expensive too. But
they do work well. Had one on 40 meters and one on 80 meters,
the wind got both of them. One of these days I'm gonna make another
one... after I rest up from the last two.

But that also means that the owner can't repair the radio without voiding the warranty, which strikes me as being against the spirit of amateur radio. A far cry from, for example, this sentence from the MFJ warranty: "This warranty is NOT void for owners who attempt to repair defective units."

Of course they are height sensitive Doc! Any HF antenna is, because the earth around the antenna affects impedance and pattern. They will not work at "any frequency higher than the design frequency", unless you are disregarding SWR and pattern/gain problems.

A dipole works well also, has nearly the same gain, and more bandwidth. A two element yagi has more gain and takes up less space.

838. WANTED - Marine 600M radio telegraph equip...

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-16 17:57:26 UTC
From: Boatanchor Bob NA4G <na4g@weedcon3.cropsci.ncsu.edu>
Message-ID: <9iv9u6$3v4$1@uni00nw.unity.ncsu.edu>
Source record: 57030

I am looking for a 600M marine radiotelegraph transmitter, of relatively late vintage, somewhere around the gulf or atlantic coasts of the US. Ideally, the SC/NC/VA area would be best, to minimize shipping costs.

Optimally, I would like to find the transmitter decks, and the synthesizer deck. One of the ITT Mackay sets would be a good choice, before they all go down into the deep six. If anyone knows of something like that floating around, do holler. A couple years back, I missed one off a passing cargo vessel, that dumped it into the Gulf off Mobile, before they docked. DRAT! Such is life and surplus hunting.....

Thanks!

> Actually aside from the battery going south..... the radio is in almost
> perfect order!!!

No sweat. The battery shell is glued together pretty lightly (unless
someone has messed with it). You can run a utility knife around the
seam several times and gradually work through it. The cells themselves
are standard NiCads and pretty easy to replace.

> need to figure out the steps involved in order to program it, set PL tones

> with both my Icom HT and my Radio Shack mobile to the point I could operate
> the damned things blind. (except for knowing what frequency I would be on
> in VFO mode)

An HW24HT was my primary rig for over a decade. I could work it one
handed without looking, but programming it was something I sat down at a
table to do, with the manual in hand. Once it's programmed, it is
pretty easy to use (once you get used to the keypad layout) but I never
did find any easy logical ways to program it.

Best price I see on a mkiig is $899 at AES. If anyone is substantially lower
than that, it might be an older model 706...

I've known at least 2 or 3 guys that have run these CCD's on 40m over
the years. They work ok, but I never noticed their signals being any
better than a normal dipole. Actually, I honestly believe the CCD's
were no better or maybe inferior to a dipole in most of the cases I've
heard. I wasn't overly impressed, and thought they were a exercise in
wasting solder and caps. Not to mention all that work. And I worked
these guys using them over quite a time period, so got a good idea on
their general performance. I'd rather run an EDZ if I wanted a bit
"2-3dbd" of gain assuming the room. I'd rather run parallel phased
dipoles to get in the 4-5 dbd range. I've tried these and they worked
very well. MK

863. Re: Kenwood TS-440S Repeater Programming

Checked my TS450S manual for 10M repeater operation. The first thing it mentions it that (as we know) some repeaters may require a subaudible tone. Also I assume you must mean 10M repeaters....never hurts to ask...

The rest is easy. Simply set up a split frequency between vfo-a and vfo-b with a 1mhz difference. Whichever vfo you use for the transmit freq will be 1 mhz down from the receive vfo. (ie 29540 xmit / 29640 rcv) Once the split is setup save it as a memory channel if you want to use this repeater frequently. For a one-shot deal or just occasional use there would be no need to put the split freq setup in memory. I hope this has been helpful. It is covered in the TS450S manual and I expect also in the TS440S manual.

That probably is the best at the moment unless someone can beat it.
The lowest I saw from the couple of quick checks that I made was
919.00 at amcom. I heard of mk2g's going for dirt cheap at Dayton, but
I don't think most are following suit. I do bet if you went to other
MAJOR hamfests you could probably make a better deal than ordering.
They want to unload their stock. I bought mine from amcom in january
for 899.99. They are actually slightly higher now. I got the 150$ icom
rebate. If you can find a mk2 new for 700$, I say buy it. I hear they
went about that cheap at Dayton. They are kinda like puters...A friend
of mine bought one about a year +- before I did , and paid about
1300$. So 700$ must make those guys feel kinda ill...:/ If they ever
break down and bring out the "j" model as rumored, I suspect "g"'s
will go real cheap. I notice the 746's are in the 1200-1250 range new.
Quite a bit of radio for that price these days. MK

869. WTT plus $

I would like to trade my Compaq notebook (laptop) computer and accessories
for an IC-706 plus some cash.

I'm thinking somewhere in the area of the following:
IC-706 plus $450
IC-706 MKII plus $400
IC-706 MKIIG plus $300

The computer is nearly new and is still under manufacturer's warranty, and
has a three year extended warranty that is transferrable.

600 MHz Celeron (upgradable)
6 GB factory HDD (can supply a 12 GB aftermarket HDD)
80 MB PC 100 SDRAM
13" LCD display
24X CD ROM
JBL/SoundBlaster sound system
2 USB ports
1 type I/II/III PCMCIA port
Serial port
External video port (supports up to 1024x768 32 bit color)
2 NiMH batteries
Laser Mouse
AC power supply/charger
DC power supply/charger
All manuals and paperwork
Recovery CD
Comes with Windows ME installed

Hi..

I'm soon to be unpacking and configuring my new 756pro.....can't wait!The question: I know the 'pro has on-board eq ad infinitum, so to speak. Theoretically one can tailor the transmit audio to any shape. BUT, everything starts with the mike, as we know. Are the SM-20's or Goldline's considered the ultimate instruments? I've only listened briefly, but I'm wondering what the guys on 14.178 are using--studio mixers and consoles? I'm just curious. Maybe I should just get the Goldline and be happy, eh? Thanks in advance for anyone's input here..

877. HDBX Rohn Tower Failure Modes:

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-17 14:45:52 UTC
From: jamie@eznet.net
Message-ID: <be301e69.0107170645.11b13c1e@posting.google.com>
Source record: 57029

Hello Folks,
I have been trying to put up a Rohn HDBX 40-foot tower and have been having some frustration with my zoning board. I have submitted the FCC PRB-1 document with it but in my initial meeting it was clear that at least one member of the zoning board was concerned that the tower would fall on my neighbors lot and kill their children. Dimensionally it would fall on their property but does anyone have any information on HDBX towers falling down?
-What were the conditions under which it fell
-How did it collapse (base, midsection etc)
-How heavy was it loaded (wind load of antennas, gross weight, boom length)
If you want to reply by posting or email directly, I'd appreciate any information. Thanks,
Jamie

"Broadcast quality audio" comes at a price - and that "price" will be BANDWIDTH!

Increasing audio bandwidth to enhance depth and "quality" of the sender's voice produces exactly the
broader spread of spectrum that largely motivated the transition from the broader Amphlitude
Modulation (AM) mode of transmission to SSB back in the 50's and 60's. Seems sorta odd to now be
eager to return to those "broader" and band-hogging methods we have been trying to avoid... Dunno
about others, but when *I* wanna listen to hi-fi, I switch on the stereo or play a tape or CD - and
I dern sure don't need "hi-fi" to adequately communicate on the ham bands, nor is it considerate to
expect or force neighboring band users to scoot further away from MY frequency just so *I* can
expound MY self-important vocal nonsense in all its full-spectrum "glory"...

I pulled this square peg (octal based, more accurately) out of a Hy Gain 644
"Footwarmer". It was marked "HyGain 760002". I was told that it's an 8908.
Both tubes have suffered a "smoke leak" (vacuum leak) and need replacing.
None of my manuals give the specs for this tube. I would like to find a
less expensive substitute.
Does anyone have it in any of their books?

If you want a good looking gold plated microphone to show others, then by all means buy the Goldline. If you want a high quality microphone for substantially less money, then take a look at the dozens of other pro-audio brands. You'll find high quality dynamic mics that look almost exactly like the Heils, but no gold plating, for as little as $39.95. And no, they aren't mimicking the Heil design - his designs come from the pro-audio field where his stuff does not appear to be a player at all these days (if it ever was). There's no magic in the Heil mics.

I've found the pro-audio mics and cables superior to those provided by the transceiver manufacturers. While there are various response curves available, even the less expensive mics offer a flat response, which you can tailor to your liking with one of the W2IHY mixers, all for less than the price of the Heil Goldline. Take a look at the W2IHY website for streaming audio examples of the sound of various mics with and without the mixers.

No, I'm not an exponent of "hi-fi" SSB, but there's much to be learned from what's been done there.

$700.00 for any radio is way out of line for my budget unfortunately. Especially when I don't want all those bands in it anyways. It would take 3 years or more to be able to save that much money. (based on my economic situation.) Thats why I am looking more towards 1 or dual band rigs to suit my needs.

Ryan

Broadcast audio belongs in the Broadcast bands. Not in the HF Amateur bands.

Interesting - just what does that mean? Do you believe that because someone uses something other than a Heil microphone and they use a mixer to tailor the audio that the bandwidth somehow becomes greater? Do you really think that the resulting signals have the bandwidth of a broadcast signal? No wonder gold-plated microphones sell so well to hams!

I sympathized with your desire, but let's turn this around. Suppose *your*
neighbor was wanting to install this tower where it could fall on you.

If he knows as little as you seem to about the safety of structures such as you
propose, how willing would you be to have him put it up?

Do you have engineering data (I think not if you're asking here) to prove the
safety of this installation? In my county, zoning permits are just that,
documents that state that the installation complies with zoning requirements.

These permits allow the installation of a tower without engineering drawings or
inspection *only if* the tower/antenna height is less than the setback to the
property line.

If this is not the case then you also have to deal with the building department
and they are the ones that will usually nix the installation unless an awful lot
of hoops are jumped through. Some opinions given on this newsgroup are (I
sincerely hope) are not going to make a case with them.

I think you need the services of a registered professional engineer.

Good luck,

Wes Stewart N7WS

895. Best "Bang for the buck" HF radio???

Hi all,

Getting ready to buy my next HF rig ($1000-1500 range) - and I would appreciate the opinions of the group.

I've narrowed the contenders down to the Yaesu 920, Icom 746 or Kenwood 570DG - basically the middle class rigs from the 'big 3'...

Operating: I do a LOT of SWL'ing - when transmitting I always use QRP (so don't care about 200 watts out or not), and LOVE to snag DX while QRP so the receiver and quality QRM filtering is all important to me.

"Best bang for the buck" rig for me? Here or Email - thanks for your opinion - it's really appreciated...

John

>mixers and consoles?

Studio mixers and consoles and $3,000 microphones are fine for commercials, because you know the finished mix will be broadcast on an AM or FM station with a very wide bandwidth. But for ssb, where you're using a 2.8 khz-or-so filter, I think much of this effort is, pardon the expression, pissing in the wind. You can only push so much audio response through a given bandwidth. If you're going to join one of the AM nets, fine, but for SSB, it's truly odd to be talking about broadcast quality audio -- it's a contradiction in terms. I suspect you'll be hard-pressed to improve much over the standard hand mike that comes with your Icom...

The "audio nuts" spend thousands on ego gratification by using racks of eq's, noise gates, studio mikes, etc. The net result is that they eat up twice the bandwidth and the guys on the receive end cut the exaggerated highs, and especially the low end, anyway so they don't sound like they have a mouth full of mush to every one except their next door neighbor (who they then proceed to use to do endless daily on-air radio sound checks).

Save your money... I have tried numerous mikes, eq's, etc. on my Pro - including a Goldline - and ended up going back to the stock hand mike for the best COMMUNICATION sound quality, intelligibility, and audio "drive". There is enough adjustment built into the Pro to get any sound you want from the stock mike. Both bass and treble EQ, as well as 3 different xmit bandwidths, variable RF speech compression, and of course adjustable mike gain. But, if you think you really need a Goldline, let me know - I'll make you a good deal on a 2 week old, as new, in the box Goldline HC-5...

If you like, shoot me an e-mail and we can arrange a sched so you can listen to the Pro with a stock hand mike. You'll be surprised - many of the contacts I make don't believe I'm using the stock hand mike - they insist it must be a Heil or a studio mike...

While I haven't tried one in the basement, there's a company called Ulink that makes one with a remote-able loopstick antenna. Mounting this along an outside wall above ground on the "Colorado" side of your house would help.

I have a $15 unit from Radio Shack that has the antenna (and receiver, I'm told) in a separate piece connected to the clock's display unit. I suppose you could cut the cable and mount the antenna remotely. I don't know if they still sell it, but it's model number is 63-968.

A while ago, Sam's Club had some "Atomic" clocks for $20; I bought 4. They're quite large and can be read almost anywhere. The antenna is built in, so it may not work in your basement. I should move one downstairs in my house and see how it does. The unit gives you month, day, date, hour, minute, second, and temp in Fahrenheit. I do know that it does NOT work when mounted on a foil-backed sheet-rock wall !

As of last weekend, Sam's Club had other atomic clock products. One is a wall clock with a wireless outdoor temp sensor for $23. The clock is basically the same as the $20 model but has a remote temp sending unit and an additional temp display on the face. They also had, for $30, a pair of atomic clocks, one a desk unit, the other billed as a travel clock which was substantially smaller. I did not pick this one up - I think I have enough clocks around for now.

I also have one of the original Heath "Most Accurate Clock" units that uses an external antenna to receive 5, 10, and 15 MHz WWV signals. It's big, bulky, gets hot, resets itself on the slightest power glitch (I'm running mine on a 650va UPS along with my VCR and computer), and uses a lot of power. In my area, the WWVB signals are far more reliable, so far.

Stay tuned. I'm putting a clock in the basement now. I should know if it syncs up in a few days and I'll post something here.

Source record: 57112

You wanrt to be able to adjust your equalization within the available passband, of about 100 hz to 3khz. Get a W2IHY 8 band equalizer. One of its features is an XLR mike input, and the ability to adjust output levels for hot mikes or low output mikes. Then get yourself a reasonably flat mike, such as a Shure SM-57, for about $75.00 plus the cost of an XLR cable, maybe another $10. Then you are business for more control over your audio, and you can make it sound decent, or DX shrill, as you wish.

You don't want or need a music recording equalizer that goes to 20kHz. You can't fit a 20Khz audio bandwidth through a ham transceiver with a 3Khz audio bandwidth. Many of those equalizers cannot stand RF fields, and result in RF feedback issues. The W2IHY equalizer is made for an amateur radio environment.

I have one, along with the manual that came with it. I could make some copies of pages and send them to you if that would help. My address is good in the callbook.

As I recall, mine does that a bit as well, but I think it's just a dirty brightness control. Mine doesn't disappear, however. My initial guess would be a bias or HV problem, so you may need a HV probe and one hand in your pocket while troubleshooting it.

Let me know what you want (besides a new scope or the entire manual).

LOOKING FOR SOME AMP PARTS
FOR THE WINTER PROJECT
!!!!!!!!!!!!!!!
looking for a socket and chimney for the 4-1000 tube
eimac brand only

looking for a b/w 800 plate choke

looking for a triplett meter model # 220-6

i have a eimac sk 410 socket
to sell or trade fits the
3cx1200a7 and d7 tubes
and maybe 3-500?
i have simpson model 136-0-5
meter to sell or trade

i have a triplett meter model # 440 g to sell or trade

i have 4 matching micronta
meters 2x2 faces brand new
to sell or trade

thanks
joseph

I should think that a 60 KHz signal would actually be STRONGER in the basement, since it's almost 100% ground wave at those frequencies..

I wish I had access to a Sam's Club.. I would love to pick up one of those clocks.. of course, picking up a 60 KHz signal from 11,000 miles away might be a bit tricky.. :)

You talking about about the heathkit HF "green cube" wattmeter? Thats the only HM-102 I have...Not sure the value now, but I bought one 15 years ago used in good shape for 35 bucks. It's not too bad an average reading meter. I installed "psuedo peak reading" into mine using caps. It acts about like the one in my 989 tuner. MK

John, get ready for a long response! I just went through this scenario myself last month, after my 4-year-old TS-570D was destroyed by lightning.

After much reading and hands-on comparison of the same three rigs, I chose the IC-746 and I haven't been sorry since. The 2-day-old rig performed flawlessly during Field Day, and even after five hours of continual contacts (more than 500) at full power, the rig was hardly warm. The IC-746 is advertised as "full duty cycle" -- that's one thing you won't see Yaesu advertise, because their rigs (at least those in the mid-class) aren't designed to run at 100% duty cycle. (That came from a pretty reliable source in the ham dealer world who talked me out of a more expensive Yaesu rig to get the 746. We won't mention model numbers, but let's just say someone who already replied to you brought it up. I think the only thing it has in common with the 746 is blue display backlighting.)

BTW, this same reputable source who lost money on me told me that the other current "competitor" from Yaesu, the FT-920, is not long for this world.

I liked my Kenwood 570 -- in fact, until now I've never owned anything but Kenwood HF radios -- TS-530SP, TS-440SAT, TS-850S, TS-570D -- but there were a few things about the 570 that got on my nerves. First and foremost were those "soft" rubber buttons all over the front panel -- they were holding up OK, but I didn't like how they felt. No real "tactile" response when you pressed them. Also, after four years, I swear they felt like they were getting like old pencil erasers -- dry and powdery. My experience with deteriorating rubber buttons on a Kenwood TM-241A 2-meter rig I used to own didn't help my distrust of those buttons' longevity. Second, the CW side of the radio has a glitch that I think is not unique to my radio but a design defect, because I've seen others complain about it here. RF must get into the keying circuit from INSIDE the radio, because every so often, usually once or twice PER QSO (which is too often), my rig would key down for about five seconds. I'd just be sitting there sending away when all of a sudden the rig would send a long daaaaaaaaaaahhhhhhhhhhhhhhhhhhhhhhh for no reason. I can't tell you how many times I cleaned, checked and re-wired my Bencher paddle thinking I had a short somewhere, until I started seeing the same complaint from other 570 owners. Third, the internal ATU in the 570 has no motors -- and therefore no variable capacitors -- instead, about two dozen relays to switch capacitances. This setup (a) doesn't seem to match my antennas as well (I had an MFJ-969 antenna tuner that I used all the time with the 570, and since

I purchased the 746 I haven't had to use it), and (b) sounds like some kid's shooting a whole roll of caps in his cap pistol every time you press "tune." I swear there must be anywhere from 10 to 30 relay clicks as the ATU finds a match. Fourth, the 570 has really touchy tuning -- the normal rate is too fast (it's hard to "zero" a frequency unless you have REALLY STEADY hands), and the "fine" rate is way too slow to keep on all the time.

(All you other readers out there, please keep in mind that these are my personal impressions after four years of ownership, OK? Your mileage may vary.)

All in all, I guess I was just ready for something new. The Icom's tuning rate per knob turn is slower, which I like, and the tuning rate changes with the speed at which you turn the knob. (Funny, my old Kenwood TS-440 had that feature. The 570 doesn't.) The Icom's knob also has a spinner hole in it that turns with your finger -- much more comfortable and usable than the Kenwood's shallow detent. The Icom has triple band-stacking registers -- my Kenwood only saved the last place you were on each band. Of course, the spectrum scope and all-mode, 100-watt 2-meter capability of the 746 had an effect on my decision, as did the current $200 coupon from Icom. And placing all three radios (746, 570 and 920) on the same antenna and frequency at my ham store really sold me -- the Icom heard better, possibly due to its quadruple-conversion receiver. Oh! one more thing -- the Icom's DSP is at the IF level -- no other radio in this class can claim that -- and works much better than the DSP in my 570 did.

Funny, just after the lightning strike occurred, I was fully expecting to pick up another 570. I never knew a rig in the same price class could so fully beat the pants off it! Get the 746 -- you'll love it.

73,

Meade KA4RQB

At www.exportradios.com, they advertise the Antron 99 with
ground plane kit for $69.99. Without the ground plane kit,
it's $54.99.

>
> Any idea what the going rate for a HM-102 is?
> If you're selling one, don't answer. :)
>
> Steve, N9OH

There really isn't a going rate, more like a range. Much of the price is dependent on physical and operational condition. I have a HM-102 and a HM-2102, which is just a higher frequency version of the HM-102. The HM-102 is modified for peak reading. Good units, if your only interested in relative readings.

Below are some prices from various sources.

http://www.aade.com/hampedia/prices.htm#pricelist

MODEL SALES MIN AVG MAX
HM-102 12 $20.51 $40.25 $62.99
HM-2102 12 $26.00 $37.38 $46.00

http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm

HM-102 $30, 35
HM-102 SH $40
HM-2102 $35

NOTE: 'SH' means that the price INCLUDES SHIPPING!!

http://www.vhamfest.com/prices.html

HM-102 $25, $30.00
HM-2102 $20, $25.00

The bait and switch comment is in reference to how some, namely Twisted, likes to conduct his business here. He will post something you said, then tries to make it seem you said something else, thus his name - Twistedhed, just like his logic.

I don't smoke. I have a friend, about 4 years older than me, who has lung cancer from it. It spread from there to the lymph nodes in his chest, and his left hip bone. Doctor gave him about a 20 percent chance of making a full recovery.

Finally! Got the new YO-YO-TENNA DELUXE downloaded at our website. This is the new dual "fishing reel" wind-up dipole antenna system featured in several ham magazines. VERY popular. Works from 2 thru 40 meters and you can purchase addtional single reels for coverage on 75/80 and 160 meters. For a color photo and further details, please visit:

Source record: 57134

: You wanrt to be able to adjust your equalization within the
available
: passband, of about 100 hz to 3khz. Get a W2IHY 8 band equalizer.
>snip

I'd never heard of the W2IHY panel. Sounds interesting.
The biggest problem I see is the variation in receive audio
in stock radios. Many utilizing the internal speaker have
resonances in the cabinet and a low cost speaker. Often
there is severe rolloff by the speaker below 500 hz to hide
low frequency response to hum and noise (especially on
VHF rigs).

Like the man said, with a 2.4 khz filter you can't even pass
more than 2.8 khz of audio, so we are not talking about
"broadcast" quality. What you need to do is analyze your
speech and make adjustments in your mic or through
equalization in order to make yourself sound more natural
for armchair paths, and more intelligible on noisy paths.
With some radios like the TS-830s you can adjust the passband
a little by careful adjustment of the carrier and injection
frequencies in order to find proper bandwidth shaping and
centering of the cascading filters.

You will want response out to 2.7 khz for the best intelligibility,
with a peak between 2000 and 3000 hz. How much peak (if any)
is the question, and depends on the path and your voice.
Frequencies below about 500 hz don't carry much information,
but if rolloff is too steep, the voice sounds thin. Filter response
below 100 hz may jeopardize carrier suppression and above
3000 hz may involve voice products that lead to fatigue and don't
add to the intelligibility when compression or clipping is used.

Jim, ac6tk

This is one of the most important steps to having good audio that is equal on either sideband, and pretty much applies to most any radio. Myself, I don't waste time with fancy rack gear. But I do try to use a decent mike. I usually prefer my old audio technica dynamic mike that I've run for years and got free out of a junk pile. I also "shape" the audio a bit by taping up most of the back and side ports to cut the bass way down. It still has plenty taped up, and cuts that cruddy too much bass mush sound. I want to sound as close to natural as possible. Trying to mimic the audio of Howard Stern seems to be a waste to me on a system that only covers 3000 hz appx bandwidth. After all, true hi-fi audio in the ham bands is illegal. BTW, those with cruddy tv speakers may not get what I mean about Howard Sterns audio, but those with good speakers will know what I mean..g He has the type audio most "ham audio nuts" seem to like. Lots of bass,compression, reverb, etc , all mixed in. Gives it the BC type sound you hear with all the FM dj's. It doesn't bother me if people run that stuff, it's just not for me. Seems a waste of money to me. I can do the same thing using much cheaper methods if I wanted to. MK

From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <3b55f4eb$0$93664$bbae4d71@news.net-link.net>
Source record: 57147

Any one else experiencing this problem: While transmitting on my IC-706MKIIG, every now and then, only on the HF/6 portion, the TX output will drop down from 100 to about 4 or 5 watts. I unkey, then right away key back up, and the power is up to normal. Sometimes this happens a dozen or more during one transmission, sometimes I go for a week or longer without this problem. Antenna or dummy load, it does not matter. This is not an high SWR protection fold back situation. I am thinking some sort of high RF field is affecting some sort or switching or electronic relay inside, and when this gizmo or what ever is saturated, the rig shuts down. When I unkey, the saturation or field is no longer present and the rig functions normally. Maybe a cold solder somewhere? This is really weird. I never know when it is going to happen, but it did NOT do this during field day when I was really hammering the rig and it got real hot.

Brady,

Ok, well don't do what I just did. :-) I will explain in a moment*.

The captive screw holding the unit into the housing is located under the cap code label (above the reset button).

Carefully, remover the label's cover plate (*I just shot mine about 30 feet across the room), peel back the label, and remove the screw.

The RF deck should then slide out the battery end of the unit.

I do have a question though, why would you want to open one of these things? I use to repair them back in the 80s, and there is not a lot you can "fix" and/or modify.

Even though it still works, I consider mine a novelty item and occasionally use it as a paper weight. :-)

Most of the devices are chip (leadless) ICs, and a lot of chip discrete devices. In fact, the frequency element is not a xtal, but rather a complete, custom, oscillator assembly.

Still, I suppose you have your reasons. :-)

73,
Bob - KA9FLX

I agree, Ray. For those not familiar with the W2IHY gear, go here www.w2ihy.com and check out the online audio demos. I'm not interested in hi-fi audio on the ham bands either, but it makes more sense to me to use a lower priced microphone along with a device like the w2IHY 8-band mixer, than a high priced mic. The unit has several features on top of the mixer that make it worthwhile. After looking into the pro-audio mic situation, I ended up with an Audio Technica ATR30, which is a very flat response mic, designed for vocal performance. It's distributed by Radio Shack, under the Audio Technica name, and is often on sale for $39.95, including a quality XLR cable. My transceiver has adjustable low and hi pass filters for the mic line, so I can tailor the overall response without an external mixer. The pro-audio guys also have some very nice low cost stands, including some that clamp onto a table or shelf and are telescoping. They can be seen at any large music store that handles pro audio gear, and the prices are very low compared to what you'd normally spend for a mic and/or stand from a ham manufacturer.

The timing of this thread could not be better.
I'm also in the throes of choosing a new HF rig.
Had pretty much made up my mind on the TS-570 then started to hear a few uncomplimentary comments and decided to revisit the situation.

On the second go around I started to lean heavily towards the Ten-Tec Jupiter for the following reasons:
1 - Everyone I talked to who owned, or had used a Ten-Tec seemed to rave about the receiver; including some Hams whose opinions and expertise I sincerely respect.
2 - The Jupiter can be upgraded by downloading free software rather than purchasing the next model.
3 - I like the idea of being able to operate it as a stand alone unit, or with the added versatility of computer control.
4 - With all the filters etc. there are really no optional extras other than a remote keypad/VFO control or power supply.
5 - From what I have been able to learn Ten-Tec offers superior customer service.
6 - The only negative comment I have heard so far is some complaining about the speaker output being ungrounded (floating).

I too do a lot of SWLing, am not interested in running more than 100 Watts and am also in the $1,000 t0 $1,500US price range.

While I have owned Kenwood, Icom and Yaesu rigs I have never owned a Ten-Tec so have no personal experience, or biases, to call upon.

I would be most grateful for any comments anyone would care to make since I am still undecided!

Hi Bob,

Do you have the 453? Actually, now the trace doesn't even come on. The "intensity" conrol was very clean when the trace was visible so I'm not convinced that this is the problem.

I may have also located a complete user and service manual from someone at a cost of $30 (photocopies only) but worth a try. This whole thing may be more than I can tackle myself so I'd like to find someone who can repair it for me. (I know that's not the true spirit of the hobby but time and experience are two things I don't have.

I appreciate your offer (although a new Tek o-scope would be great) and I might take you up on this one day. I work in Greenwich, CT so postage or fax wouldn't be expensive to my work location. I will let you know.

While increasing the high frequency audio energy of a transmitted signal could possibly increase bandwidth, it probably wouldn't, because the crystal filter in the exciter portion of the transmitter would limit the audio bandwidth anyway. Boosting the low frequency energy in order to give a "richer" sounding signal shouldn't increase the bandwidth either. One thing that COULD increase the bandwidth is driving the modulation section of the exciter into clipping, which could generate IM products, thus widening the signal, but if all stages are kept in their linear regions, there shouldn't be any problems. Maybe one of the other oldtimers can shed some light on this one. You know who you are!

FOR SALE:
Lafayette HA-225 Receiver in very good condition.

Has general coverage and also bandspread for the amateur bands.
1966 era. Has Five (5) bands: 150-400kHz, 1.6-4.8MHz, 4.8-14.5MHz,
10.5-30Mhz, 48-54MHz

Additional bands for bandspread on the amateur radio bands.

14 tubes: 6AQ8 (6m rf), 6BL8 (6m mix/osc), 6BA6 (rf), 6BE6 (mix), 6AQ8
(Q-Mult/Calib), 2
6BA6 (if), 6AL5 (det, anl), 6BE6 (pro det.), 6AQ8 (af,bfo), 6AQ5 (af
out),
0A2 (reg),
6CA4 (rect)

Interesting design in that it covers all the way up through 6 meters,
and it has the output transformer mounted diagonally to minimize
hum from power transformer.

See: http://member.nifty.ne.jp/hanazawa/radio/lafayette/

Will sell for $95.00 plus shipping

Also have a Lafayette external speaker to go with it.
Model 99-2521 - matches their classic receivers. Excellent condition.

Will sell for $20.00 plus shipping

Pictures available

Anybody remember an after market accessory for rigs like the FT-757 and maybe the IC-735 which allowed you to change frequency via a key/DTMF pad?? I think it was called a QSY'r or something like that. I recently picked up a FT-757 and would like to have this option if it was really available and I am not just dreaming it..?? Thanks in advance for any response.

Source record: 56962

Well, as far as I can tell, based on some things I learned a very long time ago when I was just an itty bitty kid, the digits sure look like 4, 5, and 3, so I guess I really do have a 453. Blue metal case that splits into two halves, kept together with a couple of knurled screws, small display (0.8 cm/division), dual channel, dual delayed time base, a few controls on the right side, Z axis input on the rear, attached power cord, test lead storage in the cover, an attached handle that doubles as a means of elevating the front, lots of gray knobs with a few red ones interspersed, several levers and neon indicator lamps, and a small toggle-type power switch on the right side (I've already replaced mine twice).

The manual probably doesn't have any kind of troubleshooting section, just theory of operation and, of course, calibration and adjustment. Another scope would be handy for troubleshooting the H and V circuits, but a good voltmeter should be enough to get you through it. As I recall, most of the circuitry is exposed and fairly easy to get to, but there is a lot of high voltage present, so you need to take the appropriate precautions. I don't remember if there are voltage readings on the schematics, although it would seem that they should have them. I'd need to go get my manual to make sure, but as you've found another source, good luck. It's a big manual, and $30 is not a bad price to pay for one, although the schematics are black and blue ink, and that may not show up in the copies.

If you decide to tackle it yourself, I may be able to provide some voltage readings from mine, if they're easy to get to.

It really doesn't matter how far away I'd need to send stuff; it costs the same whether it's a block away or across the country.

Take an old AC cord and fashion it so that it will fit the power hookup on the radio. Don't worry about which lead is positive or negative. Plug in to any household outlet, tune to channel 19, and then continuously start hollering into the mic 'How bout it skip land'.

Good luck! We all anxiously await your results.

Sure. Keep spamming the newsgroups until it is sold. If it doesn't
work, the buyer will let you know.

If you press the AM button, the Royce should work exactly like the
Realistic. If you can't hear anyone with the AM button pressed in,
there is something wrong with the Royce. Be sure the PA/CB button is
in the OUT position.

<sentek@sprintmail.com> wrote:

>If you want a good looking gold plated microphone to show others, then by
>all means buy the Goldline.

The Goldline is more than just a good-looking mic. There's quite a bit
of engineering that went into the response. I personally like the
sound. But that's just me, and apparently, it seems I'm wrong.

> If you want a high quality microphone for
>substantially less money, then take a look at the dozens of other pro-audio
>brands. You'll find high quality dynamic mics that look almost exactly like
>the Heils, but no gold plating, for as little as $39.95.

You're not going to get the same sound from a $39 microphone. Maybe it
sounds the same to you. There are a lot of people who are just fine
with a small integrated component stereo system that costs $125,
including speakers. But there is a definite difference between that
and a discrete component system costing upwards of $2k.

You don't have to get a Goldline. Heil makes a couple of other mics
that have a very pleasant sound to them that are less expensive.

>And no, they
>aren't mimicking the Heil design - his designs come from the pro-audio field
>where his stuff does not appear to be a player at all these days (if it ever
>was). There's no magic in the Heil mics.
>
I beg to differ again. There's over 30 years of audio experience
behind their mics. True, Heil is out of the pro-audio field now, but
his stuff was definitely major-league in the late '60's and through
the '70's. He built some of the first full-scale PA rigs for touring
bands such as The James Gang, the Grateful Dead, and The Who.

>I've found the pro-audio mics and cables superior to those provided by the

>audio examples of the sound of various mics with and without the mixers.
>
I agree here. The W2IHY eq is a sweet little box. And, if you saw them
at Dayton, you might have noticed they also had Heil mics connected to
them.

>No, I'm not an exponent of "hi-fi" SSB, but there's much to be learned from
>what's been done there.
>

"Hi-fi" ssb isn't for everyone, and it isn't for every QSO. If you're trying to punch through a dx pileup, you need something narrow and peaky to make yourself stand out from the noise. However, for casual ragchewing, it makes for a less fatiguing evening.

And no, I don't work for Heil.

Just one comment here:

I see several posting refering to Julius' W2IHY box as a "mixer."

This is incorrect. It comprises an 8-band graphic equalizer and a noise gate. It has no provision for accepting several audio inputs and merging, combining, or "mixing" them to form an output signal.

Julius has a great product that performs very well, but mixing is not on its agenda.
And, its cost of about $253 delivered is considerably more than the cost of a GoldLine.

For mixing, I have found that the $99 Behringer MX602A unit to be unbeatable for the performance vs. cost. It also has more than adequate EQ functionality.

A 602 plus a GoldLine will run you about what the W2IHY unit costs.

Yes, the headline reader syndrome. Ah cain't read good, but them pichers sure is nasty lookin'.

> This is especially true when the
> magazine is not directly targeted to their vocation or interests.
>
> I see ham frequencies floating in that sky. I see that as an implied threat.

Seeing "implied threat" from a magazine cover picture of "ham frequencies floating in that sky" is borderline paranoia. When you see a TV commercial of some kid floating in the sky after drinking some stupid colored drink, does it mean that we are in danger of losing our children?

> -what the heck is "WQAZX" -- almost a ham call? And you're an AOLer!!! That
> alone speaks volumes.

Not that I particularly respect AOL, but - about what?

Anyway, now that I've read the article, sending any protest letters to the mag will certainly make us look like idiots. What a joke!

971. FS: Yaesu FT-920 HF/6 Meter package

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-19 09:48:29 UTC
From: W6DKN <w6dkn@qsl.net>
Message-ID: <995536114.619088@ns1.gct21.net>
Source record: 56974
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

For Sale:

Yaesu FT-920 HF/6 Meter Amateur Transceiver package - $1200.00.

This rig is in "as new" excellent condition and works 100%. No scratches, dings, etc. On a scale of 1-10, I would rate it a 9.5 - but only because it is a "used" radio. It was just returned from Yaesu Cerritos service (7-15-01) after a complete checkup and alignment, and everything is performing equal to or better than factory specs. (It has never been taken out of the plastic bag since it's return from Yaesu)

This rig has been upgraded with the optional TCXO, FM board, AM board, and InRad 2.1 SSB crystal filter - all work has been performed by Yaesu Techs. Additionally, it has had all factory updates, including the noise blanker improvement and SSB power fixes, as well as the factory MARS/CAPP enhancement. It comes with the original box and packing, hand mike, power cable, user manual, original Yaesu 2.4 SSB filter, and the factory service manual.

This is a current production model, if purchased new, this package would cost in excess of $1500.00 for the parts alone.

Buyer to pay actual shipping charges from 93535, and insurance if desired (highly recommended).Payment is accepted by US Postal Money Order only. Unit will be packed in original cartons, double boxed, and shipped via UPS, FedEx, or USPS - buyer's choice.

For detailed specifications click on this link :

http://www.yaesu.com/amateur/ft920tx.html

Thanks for reading and 73,

I've actually heard of a CB'er doing this before...

I've also heard of a CB'er hooking up his CB to the cable TV cable
because he thought that he could get really good range if he hooked
into the tall cable TV tower just outside town. Guess he didn't
realize there would be a few pieces of equipment between the TV & the
tower.

I wouldn't have a clue really. Wonder if maybe a relay contact
problem? The 706 transmitter does have a few quirks. Sometimes on 17m,
I get an oscilation if I'm going into a weird load. I can be adjusting
the tuner at say 20-30 watts, and when I get to the weird tuning set,
the rig will take off at nearly full power. I always instantly unkey
when it does this and reset the tuner. Also I've noticed times when
keying in the AM mode, that when going into a weird load sometimes the
output will have a delay before it keys. Maybe 1-2 seconds after I
key the mike, then it kicks in. These seem to go away once you get the
load set to where the rig likes it. Kinda weird..Have never had your
problem though. MK

True but the filter bandwidth is usually specified at 6 dB down. If you put enough energy into it above this point you can probably broaden the signal somewhat. How much depends on the shape factor of the filter.

Yep, I remember the QSY'er. Used to see their small (2" x 1.5" ad in
QST).
Seems like there was a QST construction article on how to build one ?

I searched google.com for QSYer and found a web page that referenced
it, apparently it was made by Stone Mountain Engineering.

Hi Pete,

Get the whole manual, it will make things easy now and later if
you have more trouble.

We have a different problem with one of our old tek scopes.
Found a bad resistor be accident !
Check all resistor values on that trace board and the pots too.
some Deoxit contact cleaner is not a bad idea also.

good luck with your scope.

Proof enough... Free mag put out by GEEK!

It's no secret, any salesman would love to be
able to load up the ham bands with customers.
Since these people can't hold jobs anyway, they
are always looking for the quickest path of least
resistance to get what they can before it's time to
go. They don't care about anything that ham radio
stands for unless they can use it to stuff their
pockets.

But, if it were true that "ham radio is dead" as
easy as it is to get on the air these days, that
really reflects on 2-way industry as well. If
people don't need ham radio, why would
anyone want 2-way?

The reality, is that ham radio has all the technical
advantages of conventional 2-way operation, but
leaves the commercial aspect behind. People
who like to play with radios, like ham radio.
People who like to talk on the phone want to
take it with them, and don't want to be bothered
by too many gadgets.

One could also interpret the cover as a list of
frequency bands where the dying mobile radio
industry will hold out after wireless industries
have completely assimilated the rest of the market.
Currently, I have more Ham business than commercial,
and even taking on inside wire/PBX/LAN/CCTV
services, I don't have enough volume to give up
my day job.

984. Swap: Computer gear for HF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-19 18:15:41 UTC
From: rkasprow@hotmail.com
Message-ID: <d8f49a6c.0107191015.2688dec2@posting.google.com>
Source record: 56986

I am looking to swap some of my computer gear for a decent HF rig.
Specifically interested in the Kenwood TS-50, ICOM IC-706 and Alinco
DX-70 or DX-77. Other rigs certainly considered.

What I've got.

Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse +
Keyboard, Windows 2000 Professional. More ram is available.

Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra
Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000
Professional. More ram is available.

Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse +
Keyboard, Windows 2000 Professional. More ram is available.

Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available.

Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent
condition and recently removed from service.

If you see something you like, please let me know. I am open to trades
or sales on any of the machines. I hate to get rid of them (were for a
unix project) but the XYL says they're taking up too much room.

Thank you!

alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap
Body handling: Binary attachment payload not displayed: josttech.vcf

This is from a SK and I am selling it for his XYL.

It is a Kenwood TM-241A with mic, bracket and manual. The power cable
from
the radio connector is not with the radio. It does have a few scratches
on the front
of the display but it still looks good. Overall the radio is a good 8++
out of 10. He had
gotten it for his car but she said he had never installed it. I have
tested it on the bench and
it seems to be doing just what it should. It runs 50/10 and 5 watts
output and the receiver
covers from 118 to 174 Mhz. I do not think there is any mods in the
radio. It is 5.5"x1.5"x6.25"
in size and is 2.65 lbs.

I think it should go for over $150.00 so, the first real offer over that
price has the radio.

Please email me direct and I would guess that the shipping should be
about $12.00 USPS.

YES, she gets all the money for you out there who have to make a
comment.

Greetings, all...

I was unfortunate enough to have had two Kenwood HTs stolen recently.
So I went to their web page to contact them with the serial numbers of
the stolen HTs... following their menu, which insists on asking you
for your address, phone number, etc... okay, fine, I don't really
like giving that out, but for something like this, it makes sense.
Then I find that I cannot send them a message... all they did was
collect my address without allowing me to send them any message.

That makes me a fool... but it makes then first-rate shitbags.
I will not purchase from Kenwood ever again.

It's quite possible that Kenwood simply has a broken link on their web page. I seriously doubt that they purposely collected your information and then refuse to send your comments. Why don't you send an e-mail to their web master.

Day before yesterday I tried to place an Internet order with a company. It had me fill out all my order and shipping info but refused to take me to the credit card processing page. A note to the webmaster had it working the next day.

Some vendors of other products, such as radar detectors, will refuse
to service a product whose serial number has been given back to them
as stolen.

The police have been contected... the theft took place on a government
facility, so I really, really do hope (but unfortunately know better)
that the person(s) gets caught.

I need a new upper sideband crystal for my 830. Has anyone had good experience purchasing parts from any distributor. The one website I have found which lists parts does not list this item -- although it does list the USB crystal for the 820 which seems to be the same frequency as required for the 830. Any ideas welcomed.

From: Rich Griffiths <richg@one.net>
Message-ID: <3B575A54.D621547C@one.net>
Source record: 56995

Jamie:

Forget about items 1 and 2 of your posting. You do not want to talk about towers falling down. Talk only about them staying up.

Go to the Rohn web site (something like www.rohnnet.com -- it's been a while), or contact Rohn by phone. They make lots of information available about foundations, guying, acceptable loading, etc. Rohn seems to be a very responsible company that is serious about safety.

With Rohn's information and data about whatever antennas you intend to put on the tower (wind loads, etc.), you should be able to put together a clear case about the safety of your tower -- or perhaps convince yourself that you need to do things differently :-)

If you don't have the background and necessary knowledge to do this, get help.

... Rich

Here is the response I got directly from Bishop...

My response would simply be, "Oh, dry up."

I suggest you take a look at all the editorials we've published in defense
of amateur radio frequencies. As far as I know, ours is the only magazine
that covers commercial radio communications that has taken editorial
positions that defend frequency allocations for amateur radio. There's
nothing in the article to suggest our position has changed one little bit.

Hi,

I just got my Icom 756Pro. I'm totally psyched. Having this thing sitting on my desk is the push I needed to upgrade my license so I can use HF.

A couple years ago everyone told me to learn code by using SuperMorse. They said set the word speed slow (to 5wpm), but set the character speed to the 13wpm rate. They said it's easier to later increase your word speed if you learned the faster characters.

So is this still the best way to learn code? I bought Gordon's tapes years ago, but never listened to them. I just want to pass the friggin test so I can start talking as well as listening. What's the fastest/easiest/best way to learn code?

THANKS!
John

1001. Cushcraft R5 info and advice needed

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-20 01:56:06 UTC
From: n9rk@aol.com
Message-ID: <20010719215606.25423.00000292@ng-cf1.aol.com>
Source record: 56904

I recently bought a used R5 antenna. I have come to discover that I probably can not put it up where I had first intended. I would have been attaching it to a vent pipe on the roof and the antenna would be too tall for that location plus the counterpoise would stick way over the roof there and that is a no no with our landlord, (we live in an apartment building). I had thought it would work as when I talked to a tech at Cushcraft before buying the antenna they had told me it was shorter and that the counterpoise was alot shorter. Anyway, my other area to put this antenna would be to use arms and attach it to the mast going up the side of the chimney. My question(s) is this: Would that interfere or detune the antenna? Also, there would be a couple of beams up above it, would they pose the same problem? Or would an auto antenna tuner on the radio take care of any of this?? Any help, info, or insiteanyone can give would be greatly appreciated!!
Please email me direct at: N9RK@aol.com.

Thanks to comments like "Where have you been" and "Are you joking".
I love nice comments, don't you. I have put the price of this radio into
what folks say it should be.

Just for the fun of it, I have been here living a life outside of news
groups, and you?

Thanks in advance, John

I'm scared to learn the characters at the 5WPM speed because I'm worried it will be harder to upgrade and harder to actually use CW on the bands.

Are there places on the net where I can listen to live CW?

I sit in front of a computer all day, I could easily put on headphones and listen to live code while I work.

Does anyone broadcast CW via real audio, shoutcast, or any of the other audio broadcast protocols?

Thanks,
John

I used the Gordon tapes and passed the first time. If you will devote a couple hours a day, every day, you should be ready to take the test in a couple weeks. It's really not that tough to get 5 WPM.

Good Luck

I have heard of a local group of CBers doing just this. All lived within

a short distance of each other. And enough 27MHz signal was able to
leak thru the cable system so everyone could hear each other without
hearing much if any external over the air CBers. A private party line
of sorts. Probably trashed TV channel 2 though.

A CB SSB receiver can hear a regular AM CB transmission. The
reception will probably sound a bit like Donald Duck with
possibly a whistle in the background. Play with the clarifer.
Tune whatever channels the locals like to yack on. The radio
probably has an AM receiver mode on it as well, try it. Find
some signals on AM, then switch modes to SSB upper or lower
sideband and you should hear those signals sound like Donald Duck
and whistles. Normal for AM received by an SSB radio.

The new ARRL standard for the code tests is 5 WPM with the
characters sent at 15 WPM. I'd learn the characters at about
that speed so it will not sound different if you take the test
at an ARRL VE test session.
I'm not sure if the other VEC'S are using this same standard
for their tests or not.

1010. 500W linear driving attic antenna bad idea?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-20 04:03:47 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3B57ADA3.112BD945@ix.netcom.com>
Source record: 56913

I'm using a stealth attic antenna on my HF rig. And I can work a fair amount of common DX. Theroitically with more than 100W of power I could get more contacts, but I'm sure that 500W into a crummy attic dipole strung in the crawl space above my top floor apartment would be asking for lots of trouble. With the rig without any linear I haven't received any RFI complaints (but the neighbors may not have figured out where any RFI is comming from).

Besides, that Icom linear with the autotuner is quite expensive, like $5K. :-(

>

Yes and no. You may be assuming that by "broadcast quality" he is referring to FM broadcast quality, but there is also AM (mediumwave and shortwave) quality and if that is used as a standard, I have heard several amateurs who have nearly achieved parity with that standard.

How did they do it? Yes, they've widened their transmitted signal bandwidth a little bit, but the major enhancements have been made with good microphones, outboard sound processors-- including preamps, parametric equalizers, compressors, and noise gates-- modified audio circuits following the mic inputs of their rigs, Class A drivers/amplifiers and, yes, wider IF filters in their transmitters.

As another data point in this debate about what constitutes "broadcast quality audio", would you say that your telephone has better quality than your SSB signal? Probably so. Yet, the phone's audio bandwidth is not much better than 3 kHz. It's all the processing applied by the phone company that makes it sound so good. (I'm not talking about the typical mobile or cellular phone here; in my opinion their quality has taken a big step backward.)

As SSB prepares to be de facto phased out as a less than state-of-the-art communications mode in favor of digital modes, just as CW has, it is interesting that so many hams are just now becoming aware of what it takes to produce the cleanest signal possible under the constraints of the technology. I have found it quite pleasing to listen to and have felt no animosity toward the techniques whatsoever.

It's not a problem to increase your speed. Go ahead a learn at 5 wpm, and when
you use the code on the bands, your speed will naturally increase as you gain
familiarity with it.
>
>Are there places on the net where I can listen to live CW?

Check the arrl site, http://www.arrl.org I know they transmit code at all speeds
on the hf bands; they might be doing it on the internet now -- but I'm not sure.

I've heard stories of hams stringing dipoles down hallways while running
that kind of power.
Of course that was before anyone worried about the effects of RF exposure.

I hope you also attached an antenna or dummy load. If not, that is a great
way to destroy a radio.

Theoretically, not MUCH more. A doubling of power = 3db gain. You're looking at a possible 7 db gain. That equates to somewhat more than one "standard" S-unit. The bands are "soft" right now, but should be better in the fall and winter. I worked more than 60 DX countries on my dipoles (single band, resonant) at 25 feet with less than 5 watts out from my FT-817 when the propogation was good between January and April.

It could get VERY interesting once you start running 500 watts! g!

>Besides, that Icom linear with the autotuner is quite
>expensive, like $5K. :-(

I'd find a way to make my antenna more efficient before buying an amplifier, or consider a portable dipole (or vertical) and do my DXing from the field (or the park, whatever).

The antenna is the most important part of the equation. You can't work 'em if you can't hear 'em ... unless of course you've checked into a DX net ... grin!

So how did the 27 mhz signal get through the isolators in the cable
drop?

unless they burned them out first.

To test the SSB for transmitting, first make sure that you are in CB mode, not PA. Next, switch to either USB or LSB. With the mike plugged in, and working, key the transmitter and whistle into the microphone. You should see an indication of power out on the radio's power meter. If you have an external power meter, hook it up, and you should see about 12 watts while transmitting in SSB. To test for receive, tune to channel 35 through 40 and just listen, preferabley with the squelch completely off. Do this in both USB and LSB. You may have to test the receiver at various times throughout the day, until someone is actuall on the air.

I have talked to many folks over the years and here is how others have learned.
VISUAL -- some learn best by seeing it on the screen as they hear it.
AUDIBLE - Musically - some learn it as a song DAH DAH DIDIT -- The zebra did it. Dah Dah di dah -- here comes the bride - a queen.
AUDIBLE - INVERSE some study the opposites A then N, K then R, etc
AUDIBLE -- Some learn by associating it with the NATO Alphabet (I did) i.e, dit-dah followed by A or ALPHA
after a while I hear dit dah and A or alpha pops into my brain
TYPING -- some find that they have an automatic refex to hearing a character and hitting the right key on a key board. not sure the VEC's will let you take the test that way.

CHARACTERS -- at 5WPM it is feasible to repeat (or count) the dits and dahs in your head and pass the test --- but Farnsworth makes this tough - most recommend -- learn by sound only "the zebra did it"

TIME - many find studying for over 20 - 30 minutes is a waste of time - just boggles the mind. Not a problem with others (not the majority I suspect)

FARNSWORTH --- All tests are soon to be given at 12 WPM character speed, 5 WPM overall speed - contact your VEC for this. I feel that if you are tested Farnsworth -- then study that way -- have talked to several who studied straight 5 WPM and couldn't copy a darn thing in farnsworth.

Get your code speed a word or two above 5WPM - 6 or 7 WPM. But don't get your code speed too much above the test speed -- boggles the mind for some.

Another tip --- some folks are surprised that after laying off hearing code -- two days before the test -- it really zips thru. Make a trial on this --- use it if it works for you --- (I passed my 20WPM test that way)

VERY IMPORTANT TO CALL YOUR VEC AND GET A HANDOUT SHEET SPECIFYING SPEED METHOD ETC, SEE TYPICAL HANDOUT BELOW.

IN SUMMARY - THERE IS NO ONE SURE FIRE WAY -- THE LEARNER IS ENCOURAGED TO TRY THE METHODS THAT GIVE THE BEST RESULTS

My advice re: "frustrated after HOURS of Code study" Don't study for hours --- 20 minutes a day every day!
My 2 cents worth.
Also for your info -- things to concentrate on from W6YOO
A1-8. PASSING THE CODE TEST
NOTE: Following is a typical exam handout sheet used in San Diego. Before you study the code or prepare for a test, call YOUR VEC and get the latest information. You will want to know in what manner to study, note that in the

example, code characters are sent at 13 wpm, with the spacing adjusted for overall 5 wpm speed ï¿½ study accordingly is recommended.
The VECï¿½s in your particular area can be found at URL:
http://www.arrl.org/arrlvec/veclist.html

This is a typical Morse code test as given by our local Volunteer Examiners in San Diego, California. It is presented here as a matter of what to expect when you take the test.

When you put the earphones on and the tape is started, you will hear one minute of practice to help you loosen up. This will also give you the opportunity to make sure the volume is set high enough to allow you to hear the characters being sent. An example of the one-minute practice might be like the following:

V V V The following is one minute of practice at 5 wpm to allow for adjustment of the volume.

Following the one minute of practice, there will be a slight pause followed by text sent by one operator in a typical QSO. What follows is a sample of what you might hear:

V V V WA7VXB/8 de N3YZW BT RRR Thanks Roger for the nice report. Your report is RST 569 ? 569 here in Gambrills, MD. My name is Julles and I work as a Keypunch Operator. My age is 30 and I am married and have 2 children. The rig is a Yaesu 101B putting out 75 watts to a 2 element Quad antenna. I feed the antenna with 50 ohm coaxial cable. The weather here is warm and breezy, temperature is 74 degrees. So how copy? AR WA7VXB/8 de N3YZW SK

You will note that the sample QSO contains all of the alphabet letters, numbers 1 thru 0, punctuation such as the period, comma, question mark, slant bar, and the prosigns BT, AR, and SK. All of these are required by the FCC to demonstrate your knowledge of the Morse Code. The actual QSO you hear will be approximately five minutes in duration.

Following your listening to the QSO, we will check your copy looking for a string of 25 characters in a row without error. If you have copied 25 characters in a row without error, you pass. If not, you will be provided with an answer sheet with ten questions about the QSO you just copied. If you answer seven (7) or more correctly, you pass. Each letter in the text counts as one (1) character, numbers, punctuation and prosigns count as two. If you have the appropriate number of characters in a row correct, you pass the code test. As you see, you have two chances to pass.

What are the questions like? Following are some examples, along with the correct answer:
What is the callsign of the station being called? WA7VXB/8
What is the callsign of the calling station? N3YZW
What is the name of the operator being called? Roger
What is the name of the calling operator? Julles
What is the calling operators job? Keypunch Operator
What make and model radio is he using? Yaesu l01B
What kind of antenna is he using? 2 Element Quad

What kind of feedline is he using? 50 Ohm Coaxial Cable
How many children does he have? 2
What is the temperature at his location? 74 Degrees

You will note that there is emphasis on callsigns and numbers, pay close attention to the make and model of the radio being used and the antenna system. Remember which is the calling station and the station being called. Some have had the calls correct, but reversed them on the answer sheet. READ THE QUESTIONS CAREFULLY!

Remember, your first chance at passing is your text. Go back over it carefully, you are going to have some blank spots. Use your best judgment as to what is missing. Remember, state abbreviations will probably be sent as two letters, e.g. CA not CAL or Calif. We will start counting with the first correct character and continue until you miss. We will start again at the next correct character and continue until you miss again. We do this until the end of the text, counting letters as one (1), numbers and punctuation, and prosigns as two (2) characters. If we find enough correct in a string, i.e. 25 you pass.

Suppose your text looked like this before you went back over it to see if you could fill in where you missed a character: "The rig i_, a Ya_su 101B put _g out 75 w___s to a 2 el_m_nt Q __d ant__na."

That line is sixty-six (66) characters long. When you go back over your text, don't you think you could fill in the blanks? If you know rig names and models, types of antennas, feed lines, etc. you should have no problems. Another thing -- penmanship is important, write or print your letters and numbers carefully, so we can read your writing. Block printing is best, but try not to lose out because a cursive "c" looked like an "e". It is not pleasant for us to have you miss out by a single character.

If you have any specific questions, be sure to ask one of the Volunteer Examiners before your Morse Code Receiving Test begins. We wish you the best of luck and look forward to hearing you on the bands. YOUR VOLUNTEER EXAMINER TEAM
Thanks to Harry A. Hodges, W6YOO, ARRL ASM - VE Team Leader

1029. Sure Fire Way To Learn Code?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-20 16:30:21 UTC
From: AC6V <ac6v@ix.netcom.com>
Message-ID: <3B585C9B.F85BD81A@ix.netcom.com>
Source record: 56932

Well every one has their favorite program or method -- trouble is - as
my old Chief Navy buddy sed:
People are different. Thus what you swear is the best -- does'nt work
for everyone!!!

So to reiterate:
Some like supermorse, some nu-morse, some code quick, some Gordon - but
they don't work for everyone. Try em -- pick the one that works for you.

I have talked to many folks over the years and here is how others have
learned.
VISUAL -- some learn best by seeing it on the screen as they hear it.
AUDIBLE - Musically - some learn it as a song DAH DAH DIDIT -- The zebra
did
it. Dah Dah di dah -- here comes the bride - a queen.
AUDIBLE - INVERSE some study the opposites A then N, K then R, etc
AUDIBLE -- Some learn by associating it with the NATO Alphabet (I did)
i.e,
dit-dah followed by A or ALPHA
after a while I hear dit dah and A or alpha pops into my brain
TYPING -- some find that they have an automatic refex to hearing a
character
and hitting the right key on a key board. not sure the VEC's will let
you
take the test that way.

CHARACTERS -- at 5WPM it is feasible to repeat (or count) the dits and
dahs
in your head and pass the test --- but Farnsworth makes this tough -
most
recommend -- learn by sound only "the zebra did it". And soon I
understand all tests will be Farnsworth.

TIME - many find studying for over 20 - 30 minutes is a waste of time -
just
boggles the mind. Not a problem with others (not the majority I suspect)

FARNSWORTH --- All tests are soon to be given at 12 WPM character
speed, 5
WPM overall speed - contact your examiner for this. I feel that if you
are tested
Farnsworth -- then study that way -- have talked to several who studied
straight 5 WPM and couldn't copy a darn thing in farnsworth.

Get your code speed a word or two above 5WPM - 6 or 7 WPM. But don't get
your

code speed too much above the test speed -- boggles the mind for some.

Another tip --- some folks are surprised that after laying off hearing code
-- two days before the test -- it really zips thru. Make a trial on this ---
use it if it works for you --- (I passed my 20WPM test that way)

VERY IMPORTANT TO CALL YOUR VEC AND GET A HANDOUT SHEET SPECIFYING SPEED

METHOD ETC, SEE HARRY'S HANDOUT BELOW.

IN SUMMARY - THERE IS NO ONE SURE FIRE WAY -- THE LEARNER IS ENCOURAGED TO
TRY THE METHODS AND PROGRAMS THAT GIVE THE BEST RESULTS

My advice re: "frustrated after HOURS of Code study" Don't study for hours
--- 20 minutes a day every day!
My 2 cents worth.
Also for your info -- things to concentrate on from W6YOO

A1-8. PASSING THE CODE TEST

Following your listening to the QSO, we will check your copy looking for a
string of 25 characters in a row without error. If you have copied 25
characters in a row without error, you pass. If not, you will be provided
with an answer sheet with ten questions about the QSO you just copied. If you
answer seven (7) or more correctly, you pass. Each letter in the text counts
as one (1) character, numbers, punctuation and prosigns count as two. If you
have the appropriate number of characters in a row correct, you pass the code
test. As you see, you have two chances to pass.

What are the questions like? Following are some examples, along with the

correct answer:
What is the callsign of the station being called? WA7VXB/8
What is the callsign of the calling station? N3YZW
What is the name of the operator being called? Roger
What is the name of the calling operator? Julles
What is the calling operators job? Keypunch Operator
What make and model radio is he using? Yaesu l01B
What kind of antenna is he using? 2 Element Quad
What kind of feedline is he using? 50 Ohm Coaxial Cable
How many children does he have? 2
What is the temperature at his location? 74 Degrees

You will note that there is emphasis on callsigns and numbers, pay close

attention to the make and model of the radio being used and the antenna system. Remember which is the calling station and the station being called.
Some have had the calls correct, but reversed them on the answer sheet. READ
THE QUESTIONS CAREFULLY!

Remember, your first chance at passing is your text. Go back over it carefully, you are going to have some blank spots. Use your best judgment as
to what is missing. Remember, state abbreviations will probably be sent as
two letters, e.g. CA not CAL or Calif. We will start counting with the first
correct character and continue until you miss. We will start again at the
next correct character and continue until you miss again. We do this until
the end of the text, counting letters as one (1), numbers and punctuation,
and prosigns as two (2) characters. If we find enough correct in a string,
i.e. 25 you pass.

Suppose your text looked like this before you went back over it to see if you
could fill in where you missed a character: "The rig i_, a Ya_su 101B put _g
out 75 w___s to a 2 el_m_nt Q __d ant__na."

That line is sixty-six (66) characters long. When you go back over your text,
don't you think you could fill in the blanks? If you know rig names and models, types of antennas, feed lines, etc. you should have no problems.

Another thing -- penmanship is important, write or print your letters and
numbers carefully, so we can read your writing. Block printing is best, but
try not to lose out because a cursive "c" looked like an "e". It is not pleasant for us to have you miss out by a single character.

If you have any specific questions, be sure to ask one of the Volunteer Examiners before your Morse Code Receiving Test begins. We wish you the best
of luck and look forward to hearing you on the bands. YOUR VOLUNTEER EXAMINER TEAM

I'm curious.. Where did you find a parts list for the 830? I would
like to buy a few extra knobs if they sell them. I need a new
bandswitch knob, and a couple of others. The reason being is I took my
830 to field day, and some idjut sprayed OFF on the front of my radio
by accident. All cleaned off fine from the faceplate etc, and looks
fine, but the off put little speckled spots on a few of my knobs.
Won't come off as it's "melted" into the plastic. I also had some
spots on the clear window, but that polished off fine with toothpaste.
The radio is back to nearly perfect shape except for about 3 knobs. I
would like to find a few extras to swap out if possible. It'll be back
to nearly pristine if I can find those. Also, I think they must be for
the 830, as they have the chrome rings around them. I'm not sure, but
others like the 530, etc, I don't think will work as I don't think
they have the chrome trim rings. I may be wrong on this though..
Needless to say, I doubt my 830 will ever see FD again. It took major
restraint for me not to slap the crap out of the guy that sprayed it.
I had the rig covered up and it shouldn't have ever been sprayed. They
uncovered it and sprayed while I was taking a nap. I almost started
crying when I saw it...My 830 is real purty with no scratches etc.
It's strange as heck that OFF will melt plastic knobs, but have no
effect at all on the faceplate paint. Weird...Kenwood must use tough
paint. I'm sure glad. It would have really been ruined had the paint
streaked, but after cleaning with windex the faceplate looks like new.
Only the knobs got permanent damage. They are not real bad, but like I
say, I'm kinda anal about my 830. I like perfection. It's a miracle I
didn't leave my new 706 out there. I would have really been bent out
of shape if they had sprayed it. Sorry, not much help on your filter
problem...Maybe we can go in on a non working beater, and you can have
the filters, and give me the knobs..:/ MK

1031. FA: Tektronix DA4084 Prog DISTORTION ANALYZER, Exc

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-20 17:34:31 UTC

Tektronix DA 4084 Programmable Distortion Analyzer, tested, excellent:

See it and bid on it here:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1618295577&r=0&t=0&sh
owTutorial=0&ed=996099640&indexURL=0&rd=1

Auction closes: Jul-25-01 15:20:40 PDT.

For auction: a Tektronix DA4084 Programmable Distortion Analyzer, including
a special TM5003 power supply mainframe and the snap-on plastic front panel
cover. It is in excellent condition. And it has been tested, and works
great. It was last due for calibration only a year ago, in July 2000!
Everything is intact, and in good condition, and the front panel looks
perfect. (See photos on Ebay at link above.)

The DA4084 Programmable Distortion Analyzer is equivalent to an improved
AA5001, a complete Distortion Analyzer System that's fully automatic! Once
the mode is selected, automatic set level, automatic tuning, automatic
nulling of the fundamental, and autoranging of the display all combine to
permit completely hands-off operation! These automated features greatly
reduce testing time and human error while providing accurate, repeatable
measurements. Measurements are displayed on a 3 1/2-digit, 2000 count LED
display and an analog-like bar graph that simulates an analog meter.
Designed to meet rugged military specifications, the DA4084 comes with its
own dedicated power source (modified TM5003) and delivers much more than
just quality distortion measurements. How about the ability to make
automatic Level (volts or dBm), and dB Ratio measurements? It's all yours
in this powerful analyzer, plus four built-in frequency-weighting filters
that can be switched into the signal path for preconditioning of the signal
to be measured in any mode! And for even added versatility, provision is
also made to permit the use of a user-selectable filter. Programmability
via the IEEE-488 interface allows this instrument to also be incorporated
into ATE Systems for elaborate testing applications. Frequency: 10Hz to
100kHz; Input ranges: 200 ï¿½V to 200 V (10 steps). Distortion ranges: Auto
(100%, 20%, 2%, 0.2%, and dB (autoranging); Accuracy: ï¿½1 dB (20Hz to
20kHz); +1, -2 dB (10Hz to 100kHz).

See it and bid on it here:

Dave & John,

Decisions - decisions - decisions.
It'll make you pull your hair out, won't it? Well, the marketing boys play their game so well. The opinions of hams will all be different, as the <best> radio for you is the one that has *most* of the features you want at the best price. So, everyones recommendation will be different. No company has the BEST radio for everyone, or everyone would have it.
One thing is for sure, anyone who has had anything to do with Ten Tec will tell you that their service is second to none, well, maybe your mom would have taken better care of you. Service is prompt, doesn't carry a big price tag, and you probably won't need it. You'll probably start to think " something HAS to be wrong with this rig, I've had it so long". I've had elective work done to my rig twice, and they didn't charge me a dime. The Jupiter is a stand alone Pegasus, which has been out for awhile now, so all the bugs are worked out. The reciever of the Ten Tec is a pure joy.
Give Ten Tec a call and chat with them, they'll be glad to talk about any rig with you, even if you aren't ready to buy yet. Unless they've changed things, either Stan or Scott will be taking your call.

I do own a 746 as well, but think the Ten Tec is best in the RX dept. But if you like to play on 6 or 2, the 746 is probably a wiser buy. Great little rig to grab up and run portable. Mine matched a centerfed 140 foot dipole from 160 - 6 meters on the internal tuner.
Good hunting,
Mike/N4ZN

I suspect some designer got careless and/or lazy and rolled out a page
that wasn't finished.

Would there be any reason not to publicly post serial numbers of
stolen equipment, once it has been reported to police? I'm thinking
that it would be nice to have a searchable index for potential buyers
to check, and I suspect most hams would be willing to check up on a
suspicious sale if there were an easy way to do it.

1039. G5RV vs Dipole on 17 M?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-20 23:57:13 UTC
From: Alan Watts <awatts@charter.net>
Message-ID: <tlhh7eqq41j2f8@corp.supernews.com>
Source record: 56942
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

I've got a 102 foot long G5RV up at 35 feet. It works well on 10 through 40.

I find that the only band I work these days is 17 M. I'm thinking of replacing the G5RV with a dipole cut to 17M, and using it without the MFJ-945C tuner.

I've read that the G5RV has gain over a dipole on some bands. Anybody know if the dipole would work as well on 17?

Also, since the wire would be so much shorter and I'm in a forest of tall trees, I could maybe put a 17 M dipole up a little higher without running into branches.

Any suggestions?

The 102 foot G5RV will have multiple, fairly narrow lobes on 17 meters. At the peaks of these lobes, you'll have some gain over a dipole. But between those lobes are nulls. In most of the null directions the dipole will have gain -- in some directions a lot of gain -- compared to the G5RV. What you have to do is to decide what directions are important to you and decide on that basis. The free EZNEC demo program from http://eznec.com will quickly show you what patterns you can expect from various lengths of wire.

Going from 100 W to 500 W will increase your signal level by 7 dB,
and that IS significant. The lowest practically significant change
is about 2 dB, and 7 dB is A LOT, particularly when your signal
is at the noise level. Most commercial beams costing hundreds and
hundreds of dollars have less gain over a dipole (although they have gain
on both transmission and reception).

It is quite possible to operate with high power,
provided that due attention is given to some details.

There are five mechanisms for causing interference,
listed here in the order of practical significance.

1. Common mode currents

This is often neglected and therefore very common.
There are only two countermeasures:

a) completely balanced system, including the antenna,
its environment, feeder and ATU;

b) using a current-maximum-fed resonant antenna with a quality current (choke) balun;
baluns are only effective when the antenna is resonant and fed at a current maximum;
half-wavelength dipoles (including trapped ones) fit into this category,
but full-wave dipoles and "Windom" antennas do not.

Make sure that your balun has sufficiently high "common mode impedance"
at the frequency of interest. Unfortunately, manufacturers rarely specify this parameter,
the most important of all. Do not trust them, measure it for yourself.
Good baluns have between 500 and 2000 Ohms.
Email me for winding details, which depend on frequency.

Grounding the transmitter may appear to help, as the currents are channeled to the ground,
instead to the neighbouring equipment. But some power is wasted that way,
therefore it is much better to avoid common mode currents than to ground them.

Attenuating common mode currents may also improve reception,
especially reduce interference from computers, etc.

By all means avoid end-fed antennas, such as "long wire" and "Zepp".

2. Harmonics

Avoid overdriving the amplifier and use a low-pass filter if needed.
Avoid saturating ferrite cores in baluns and ATUs.

3. Near field coupling

Put the antenna as far as possible from all conductors,
especially telephone lines and similar. Near field intensity decreases
rapidly with distance, so a relatively small increase of distance
may suffice. Preventing near field coupling will also decrease loses.

4. Far field (radiation) coupling

You can hardly do anything about it, but it is much less common that most of us believe,
as many pieces of equipment do not have long enough wires to act as antennas.
In case of trouble insert appropriate filters at equipment terminals, if the owner permits
you.

5. Mains line coupling

Modern transmitters and amplifiers do not inject any significant RF currents into mains
lines.
In most cases where the interference propagates along mains lines, one has to blame
common mode currents, not the transmitter design.

You must also ensure that nobody can touch the antenna to avoid RF burns.

Good luck,

Sinisa VA3TTN

1045. Icom 756 For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-21 02:59:13 UTC
From: w4th@webtv.net
Message-ID: <70ca6cd6.0107201859.2d4924cc@posting.google.com>
Source record: 56848

Icom 756 (not the pro) This radio is in beautiful condition, and as far as I know it does not have a mark on it anywhere. It is in as new condition. I have owned this rig for 3 years. If you are looking for a dependable rig with all the bells and whistles this is the one for you. Power output is 113 watts on high power on all bands, and is of course variable.
I have all boxes, books, manuals, everything that came with the rig when it was new.
Price is firm at $1200.00 plus shipping of $25. If you would like to hear the rig I can get on the air with you, just drop me a line to make the arrangements.....Serious inquiries only, no tire kickers please.

1046. Walkie Talkie Question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-21 03:17:31 UTC
From: mcotton@gte.net
Message-ID: <3b58f493.596602@news.gte.net>
Source record: 56849

Let's start by stressing that I know nothing about walkie talkies or "family radios".
My wife and I would like to be able to keep tabs on each other when we're in the shopping mall or casino and wondering if the Motorola 2-Way T5100 that Wal-Mart sells would work inside a mall or casino. We don't want to spend more that about $60. Any information or suggestions would be greatly appreciated.

Source record: 56850

FIRST off. there's NO WAY *I* would ever describe telephone audio as "good" quality! In FACT, one
way commonly used to describe substandard ham band audio is by *comparing* it to telephone audio -
so your comment sorta falls on its face...

As far a attempts at hi-fi SSB audio on the ham bands is concerned, use all the tricks and toys you
like or can afford, but DO restrict it within the 2.1~2.4 range bandwidth commonly accepted as
within the FCC bounds of current state of the art, and if YOU like the way it sounds, knock yerself
out.... 8^)

>And soon I
>understand all tests will be Farnsworth.
>

Actually, after I recently attempted the "5 wpm" test and failed terribly, I researched a little. I didn't understand that the 5 wpm code test wasn't actually 5 wpm, but 15 wpm character speed with 5 wpm spacing...

In any case, someone told me on a local repeater that you can request the cw test at 5 wpm character speed and spacing. After emailing the ARRL's VEC experts, they confirmed this, stating that I need to ask the VEC's well in advance for this test and they have to contact the ARRL for the complete info. So, Farnsworth will NOT be the only method of taking the test...

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

I see no reason why they would not work fairly well in a mall.. but I doubt seriously if you will be allowed inside a casino with them. They usually don't allow any electronic devices in casinos, even pocket or portable radios. There never has been a more paranoid lot than casino security.. they think anything you have on you from a calculator to a pocket radio to a recording device or anything like that is something that can and will be used to cheat.

I've always been under the impression that telephone audio is, basically, good communications audio. No real highs. No real lows. It gives you decent reproduction in the range where human speech falls, but it certainly is not beyond that, from what I have read.

Guess I just got lucky. I used this stuff to set up quickly while I
was traveling in hotels / motels. I used 16 ga. flex-weave center fed
THRU A 1:1 BALUN with 150' of M17/28-RG058 MIL - 0 - 17 12515
TELEDYNE tHERMATICS COAX. Basically breaking every rule in the book
for ease of set up / immunity to surrounding obstacles. It worked
GREAT. Try playing with the lenght of coax. You may NEVER find the
magic combo of wire lenght : coax lenght, so you may have to keep some
jumpers to use on certain bands. I know, I know... but give the
laziest man the hardest job, and he'll show you the easiest way to do
it.

Hi John, check out the Yaesu FT-847. Mucho bang for the buck!!
check out THIS site below. (I sent the wrong one before!!)
http://www.uksmg.org/ft847.htm

Good Luck!!!

73, Mark

John wrote:

Hi all,
Getting ready to buy my next HF rig ($1000-1500 range) - and I would
appreciate the opinions of the group.

I've narrowed the contenders down to the Yaesu 920, Icom 746 or Kenwood
570DG - basically the middle class rigs from the 'big 3'...

Operating: I do a LOT of SWL'ing - when transmitting I always use QRP (so
don't care about 200 watts out or not), and LOVE to snag DX while QRP so the
receiver and quality QRM filtering is all important to me.

"Best bang for the buck" rig for me? Here or Email - thanks for your
opinion - it's really appreciated...

1060. FS: Frequency Counter Kit $20

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-21 13:49:45 UTC
From: Dan Tayloe <dtayloe@home.com>
Message-ID: <3B59887A.CED43234@home.com>
Source record: 56863

Our club is offering an inexpensive frequency counter kit for sale.

The stock counter is good to over 75 MHz, and with a minor parts substitution (a 74AC00), is typically good to over 150 MHz with a rf sensitivity of less than 100 mV, 10 mV at 7 MHz.

The kit is designed to fit in an Altoids mint tin which it uses as an acoustical resonator for the frequency readout.... which is in morse code. It also makes a great cw "numbers" trainer!

The kit is $20 which includes shipping. This is a very inexpensive way to pick up a nice piece of test equipment.

Further information including pictures, specifications, and ordering can be found at:

http://www.extremezone.com/~nk7m/cwafc.htm

and on Bob Hightower's website:

http://www.extremezone.com/~nk7m/

Bob is handling this. His email address is: nk7m@extremezone.com

A Quote:.."Would there be any reason not to publicly post serial numbers of stolen equipment, once it has been reported to police? I'm thinking that it would be nice to have a searchable index for potential buyers to check, and I suspect most hams would be willing to check up on a suspicious sale if there were an easy way to do it.Joe Bramblett, KD5NRH joebramblett@drunkenbard.com..."
REALLY Bad idea. I believe the negatives would outweigh the positives...For example, "Most People" would, after paying $500 or whatever of their hard earned money at a hamfest or off the 'net for a rig, would go & "check" the famous ser# page & if the rig they just got was listed.......If so, it would be time for most of them to pop off or remove that ser #. Not to mention all the Theives, sellers & others that would also now be able to check to see if they need to remove the # too....

1066. Re: Icom 706 and D104?

I use a D-104/TUG9 on my IC706MKIIG most of the time. When I ABC between the hand mic, the D104 and a Shure 444 the D-104 always wins in the clarity and naturalness arean, the HM-103 hand mic is next and the Shure 444 is last as it is too basy. I did borrow an SM-6 and no one could tell the difference between the SM-6 and the HM-103 that came with the radio.

It is very easy to crimp an 8 position modular plug on the small cable provided with the T-UG9 stand. The D-104 by itself will not work well. It does need the amplifier in the T-UG9 stand to provide the impedance conversion from hi to lo. I normally run the output control on the stand at about 10 degrees from minimum.

I've always heard that anything with a removed or defaced serial
number was automatically considered "stolen". You don't even have to
bother checking.

O.K. Thanks for the reply, I apologize for taking so long to follow up
on this post but I have out of country.
When you say wire them in series does this mean I need to solder
bridges on them like the old battery or do I just need to use the
wires from the new battery packs? How do I need to connect the wires
together (what color to what color)

Thanks again for your help
Tim

Tim,

NEVER solder wires to a NiCad or NiMH battery! It can cause damage to
the battery, or cause it to explode. I'd suggest going to your local

Batteries Plus (or compeditor) get 6 cells with solder tabs already
SPOT WELDED to them...

73,

Keith

Tim,

NEVER solder wires to any kind of a cell !! It can cause damage, or
it can explode. Better yet, go to your local Batteries Plus (or
compeditor) and get NiMH cells with tabs already SPOT WELDED to them,

and solder to those. I did, and it works like a champ.

From: "Tracy L. Brooks" <rescue@wilkes.net>
Message-ID: <9jcphn$cos2$1@news3.infoave.net>
Source record: 56881

Hi all,

I have a 16 channel Motorola GP300, model # P93YPC20C2AA.
I can program 16 channels in the RSS and program it to the radio without a problem. I can even read the 16 channels from RSS.

BUT...

When I try to use the 16 channels, they are not there. I've only got something like 4 or 5 different ones. It's really screwed up. The order is kindof like this. 1,2,4,5,6,5,6,2,5,6,2,5,6,2,5,6. (I don't know it they are in that order but it seems to repeat channels 2, 5, and 6.) Any clues?

Like I said before, if you read the radio through RSS it shows all 16 channels as unique.

Is there a fix or is it better off in the great wasteland of dead 2-ways?

Thanks,

Tracy L. Brooks

I have an Icom IC-575H 6/10m Transceiver for sale. The radio is in excellent condition with manual. This particular model is the high-powered, 100w version and contains every optional accessory, including ALL filters, TCXO, UT-36 voice sythesizer, tone-squelch unit, carrying handle, etc. Aligned by Icom factory technician and more sensitive than most six meter radios currently available.

$900 shipped.

Hi...

CQ and QST both had flattering things to say about this radio....I'd like to
hear some anecdotal remarks comparing the receive performance of the Jupiter vs.
similarily priced rigs, ie. the 746. Actually, I'm really curious to hear if the Jupiter approaches (using that word carefully, here...hi) the 756pro. No, not as many IF filter choices, no, not quite as sensitive, but with real world day to day use-----is there a LOT of difference?? Thanks in advance...

Doug n0hqn

Doug....
Well, my 756pro is not much differant then my 'ol Heathkit HW101.
The pro does everything better, but in real world day to day use....not a
LOT of differance.
It depends on your yardstick.
I think you should look at the reviews on www.eham.com ... you will get a
good feel for what owner's think of each rig.

That's not what he said... but reputable manufacturers won't repair
items without serial numbers. Going back to my Radar Detector
example, see:

http://www.valentine1.com/service/

And I quote:

"We will not repair any Valentine One that has an unreadable serial number."

But given my experience with the Kenwood web page and their adventure
in selling ham rigs in truck stops without licensing info, I don't
think they fall into the latter category.

Wrong. It's no urban legend, it's the law. Here is an excerpt from the
California Penal Code, most other state have the same or similar statutes:

CPC Section:

537e. (a) Any person who knowingly buys, sells, receives, disposes
of, conceals, or has in his or her possession any personal property
from which the manufacturer's serial number, identification number,
electronic serial number, or any other distinguishing number or
identification mark has been removed, defaced, covered, altered, or
destroyed, is guilty of a public offense, punishable as follows:
(1) If the value of the property does not exceed four hundred
dollars ($400), by imprisonment in a county jail not exceeding six
months.
(2) If the value of the property exceeds four hundred dollars
($400), by imprisonment in a county jail not exceeding one year.
(3) If the property is an integrated computer chip or panel of a
value of four hundred dollars ($400) or more, by imprisonment in the
state prison for 16 months, or 2 or 3 years or by imprisonment in a
county jail not exceeding one year.
For purposes of this subdivision, "personal property" includes,
but is not limited to, the following:
(1) Any television, radio, recorder, phonograph, telephone, piano,
or any other musical instrument or sound equipment.
(2) Any washing machine, sewing machine, vacuum cleaner, or other
household appliance or furnishings.
(3) Any typewriter, adding machine, dictaphone, or any other
office equipment or furnishings.
(4) Any computer, printed circuit, integrated chip or panel, or
other part of a computer.
(5) Any tool or similar device, including any technical or
scientific equipment.
(6) Any bicycle, exercise equipment, or any other entertainment or

recreational equipment.

*** (7) Any electrical or mechanical equipment, contrivance, material,
or piece of apparatus or equipment.

(8) Any clock, watch, watch case, or watch movement.
(9) Any vehicle or vessel, or any component part thereof.

*** (b) When property described in subdivision (a) comes into the
custody of a peace officer it shall become subject to the provision
of Chapter 12 (commencing with Section 1407) of Title 10 of Part 2,
relating to the disposal of stolen or embezzled property.

*** Property subject to this section shall be considered stolen or
embezzled
property for the purposes of that chapter, and prior to being
disposed of, shall have an identification mark imbedded or engraved
in, or permanently affixed to it.

When I was "on the job", every time we had reason to inspect a piece of
electronic equipment, if it did not have a serial number, it was taken into
police custody and checked against all stolen property reports in the NCIC
system.

If there were no NCIC hits, then if the person claiming to be the owner
could provide proof of legal ownership, the item would be returned. If the
proof was not provided within 90 days of seizure, the item was marked with
an identifying number by the Police Property Room officer, and it was
included for public auction at the next unclaimed property auction.

I own a 746 and for 100 watts on 6 and 2,
very intuitive user interface, twin pass band
tuning, keyer, LARGE display, built-in tuner,
and small footprint - its a superb bang for
the buck.

But...

you said you do QRP...and you want the BEST receiver?

Get a K2 from Elecraft. Less than $1000 built, less
than $600 in kit, and look at the receiver specs and
more than 2000 sold. Its 1 click away from being a
cult the performance is so awesome!

http://www.elecraft.com

Many folks have sold their Ten-Tec Omni 6+, FT1000s, ICOM 756Pros,
etc. after building and using a K2. Even if you thought
Crystal Diode was a country and western singer, YOU can
build one. All discrete components, gorgeous boards, and
a manual that reads easy and simple. Its even a common
choice now for weak signal fanatics in the VHF/UHF domain
for their main receiver and driver for transverters.

Stay tuned to Ten-Tec's home page - new radio coming
with a pretty hot receiver in January time frame. QRP
with IF DSP and low price ($600 approx.)

I own a 746. Good receiver and 100 watts on 6 n 2 is
very, very nice. As is built in tuner, twin pass band
tuning, large display, keyer, general coverage
receiver, APF and DSP filtering, etc. I know 2 Jupiter
users that sent them back. One guy said he thought the
firmware was too preliminary - that the control scheme
was clumsy. So maybe it gets better with time and a
firmware upgrade?

Another thought, you may already have what you need. Try Microsoft Word under Envelopes and Labels, tell it you have Avery product 8387 (Inkjet Postcards) or 5389 (Laser Postcards). You should be able to use WordArt within Word to create your own design. Add graphics, etc. This will require some experimentation and playing around, etc. If you don't already nave it, you can get the Avery Wizard software from www.avery.com for free.

Avery makes several postcard products, some containing two 4"X6" postcards per sheet, some containing four 4.25"X5.5" postcards per sheet. I don't know if they have them in colors, but you should be able to find out on the Avery web site.

I have used the postcard stock, but not to make QSLs.

Hope this helps.

There are a tremendous number of reasons why anyone with more
than two brain cells would refuse to live in California - but this
really takes the cake.

It's nice to know that they feel obligated to confiscate personal
property when no actual crime has been commited - or, for that matter,
if there hasn't even been evidence of a crime.

I worked for Icom for 11 years. Icom used to refuse service products that had the serial number removed. Then we got lots of questions as to what business it was of ours to even care where the radio came from. Many times those questions were during quite heated discussions, been there several times have had my butt chewed by the best of them over a radio :).

It simply was not worth the grief we received over that issue so products without serial numbers were always treated as NON warranty repairs. No serial number no warranty as we could not positively identify the product being referred to on the sales receipt. I am not sure how other manufacturers treat repairs.

Icom's service radio database also has a place to input serial numbers of stolen radios, in the 11 years I was there I don't think we ever caught up with one. The database would compare the serial and model number of the product being entered against the stolen radio table and would flag it if it was stolen.

For Icom I did some public speaking. One of my favorite subjects was to show just what you were talking about. I had some of the club members bring in old tube type transceivers, receivers etc. then had a few newer ones like the size of the IC-735, I would stack them if possible and about midway through the talk I would place a 706 on top and proceed to tell the group this radio did more than any of the others there. One time I was lucky and had one group bring in a 735, 575 and 275, the 706 does what all three of those radios do in one box, they were quite impressed. Yes I did tell them some of the features like, PBT, VHF high power etc, were not on the 706 but the basic radio was all three in one little box. It was fun.

Bullpucky. Since when do people have to justify why they
choose to modify their personal property? It's truly scary
that there are people like you in the world who choose to
always assume the worst, in the absence of any actual
information.

I suppose that when I removed the serial number plate from
an old rig so I could refinish the case properly means
that I stole it, eh?

If the sales receipt included the serial number as a matter of
course, this would be a reasonable approach to take. On the
other hand, I don't recall ever purchasing any electronic
equipment - including ICOMs - in which the serial
number was recorded. Did ICOM refuse to service any equipment
where the receipt did *not* include a serial number printed on it?
If not, then they certainly were acting in a tremendously
hypocritical fashion.

I suspect that this is fairly typical. My guess would be that the
actual thief would be unlikely to send the rig back to the
manufacturer, knowing that they might maintain a stolen-rig database.
And if the thief had sold the rig to some unknowing buyer for
a "great price", and the rig failed, presumably the cheapskate buyer
would be the last person to want to pay the high rates for a manufacturer's
tech bench time. :-)

Let me get this straight: You are refinishing an old rig to put
it in mint condition, and you DON'T re-install the serial tag?

More bullpuckey.

Like I said, no serial = stolen. I know it, you know it.

No, I'm refinishing an old rig so that it doesn't look like
it sat out in the rain for a year. The last time I looked,
the plate isn't an integral part of the function of the rig,
and thus there is no point in replacing it.

>More bullpuckey.
>
>Like I said, no serial = stolen. I know it, you know it.

So tell me, do you always assume that you have god-like
knowledge about everything that goes on in the world?

Unlike you, I don't assume that everything a person does
that has absolutely zero impact on anything else must be
justified to the smallest degree. Apparently you have some
sort of need to assume the worst of people. You must lead
a truly, truly empty life. How unfortunate. I hope that
someday you realize that.

Why, of course they must have been "creative." No piece of
property, in the entire history of the universe, has ever been
modified and/or altered for anything other than nefarious
purposes, according to your other postings.

The rest of us, however, live in the real world.

Well, maybe it was removed for painting. maybe I took it off because I didn't like the way it looked. Maybe the glue came off. Maybe because it's nobody's business what the serial numbers of things I own are.Who knows? Who cares? It's yours..you can do what you want with it. Except in California, where you seem to be guilty until you prove otherwise. So much for the US Constitution.

> your help. Does anyone know of a web site that I can go to and get some info on
> operating amplifiers Thanks and 73 Rob

When running SSB, I thinks it's best to tune for full smoke and then
just reduce the exciter drive. The reason being that if you retune for
the lower power level, but hit a voice peak that drives the amp beyond
this level, you will splatter. I think it's best to leave it tuned for
full power so that you are assured that even with a strong voice peak
,you will still be linear. When running CW, it's usually ok to retune,
and you can run a bit cooler. If you have loading problems on the
output, as in on "0" when fully loaded, that can be either your
antenna or dummy load is off from 50 ohms load, or you could have a
problem with switching in the tank circuit. Or maybe a bad cap in the
tank circuit. "Usually doorknob types". If you have a near perfect 50
ohm non reactive load, most transmitters are designed to have the load
control set at about the 1/3 point. Will vary on the load. You could
have SWR metering errors.
In general if the load was very low in impedance, this would cause
loading at the bottom end. "0". If the load was quite higher in
impedance than 50 ohms, it's possible to run out of load control, and
you couldn't fully load the amp even with the load control on "10". So
the antenna/dummy load should be checked for accuracy. If you still
had this problem after verifying the ant/dummy is ok, then I'd start
checking the tank circuit. Mainly the bandswitch operation #1, and
then check the loading caps. I've had a Fl-2100B, but it's been so
long, I forgot how the circuit is layed out. I'm sure you will get
other tips. BTW, normal plate is appx 2400v, so it sounds like your
tap is on the right one. "transformer". Your tubes could be a little
soft. This can cause problems trying to fully load to specs with the
"normal" appx output of about 600W. If the amp will only load to 500w,
I wouldn't sweat it too much. They won't be able to tell the
difference on the other end. These amps tend to run hot, so many times
the tubes wear pretty fast if the user tunes and operates a whole lot.
Adding fans to draw air out will help greatly on this amp. Mine used
to run quite hot when running CW even reduced power. MK

Here we have the last of my GE and other Items.

GE Master 2 UHF 40 watt repeater station in deskmate cabinet with Power supply. No duplexers. $450.00
Uniden desktop repeater. UHF on 444.425 now with 151.4 PL and cw ider installed. No duplexers. $325.00
Sinclair UHF 50 watt duplexer. Factory Ham band duplexer. $100.00
GE VHF MPA. Aegis encryption will do DES or VG as well with the correct flash program. System model with full keypad with battery and charger. $350.00
GE MPD UHF 48 channel. Nice clean radio works great. $90.00
GE PCS VHF 2 channel 136. - 153. Ham band. Good for 1 repeater and 1 simplex channels. Works great. $75.00
GE Master 2 UHF 75 watt painted handle. MC65KKG88B with UHS pre-amp. No accessories $75.00 with accessories $100.00
GE Master Exec 2 VHF with UHF rec. section. These are mobile extenders for the above UHF Master2's. They would repeat a VHF HT over the UHF radio. $20.00 each.
GE Monogram VHF 10 channel portable. 153. - 170. New battery with pocket charger. $100.00
GE MPI 2 2 channel UHF on GMRS now programmable radio's with charger and good battery. $70.00 each have 2
Motorola Mitrek VHF 110 watt with accessories. $65.00 each only 2 left.
Motorola Micor VHF 100 watt, No accessories $30.00
GE Voice guard boxes for delta and ranger 19A148909P10. $10.00 each
Master 2, 8 channel control cable $15.00 each
Master 2, Head multi channel. $5.00 each
Master 2 control head brackets $5.00 each
Master 2 control head power cable. $5.00 each
Master 2, Microphone. $5.00 each
Master 2 or delta hang-up box. $5.00 each
Master 2, Tone boards. $5.00 each
Versatone filters $5.00 each (e-mail for frequencies)
S700 waterproof control head 32 channel scan $75.00
GE MPA or MPD public safety speaker mic. $35.00
Motorola Saber speaker Mic $35.00
New VHF antennas for GE MPR, and MPS radio's $5.00 each
Shipping is over and above the prices listed.
Insurance is optional but one shipped its your I have no control hence no responsibility if you do not insure the package.
Trades are welcome but try me.
Things I am looking for:
MPS programming proms for the TQ2310
Phoenix cable for the TQ2310 (so I do not have to pull the chip)

MPA and s825 ham flash programs.
Orion factory programming cable.
S825 heads.
Dual band ham mobiles
MVS remote mount kit.
Thanks for looking
Dean
KF4WJT

Hello all,
I am searching for the schedule from the Icom IC-451E.
I have here that radio and the modulations is very soft.
So i have to get it up more.
Can anyone help me with this schedule,or just tell me how i can get it
louder??

I just looked at my "ham receipts folder" and see that the serial number *was* recorded by HRO for my last purchase (a Yaesu 8100). Ditto for an IC-W32A bought in '97. On the other hand the serial number for my HF rig was not recorded.

Ever had a radio, for instance: an ADI AT-600, an Icom IC-2AT, IC-02AT, or a R/S HTX-202/404, with a damaged case that you wanted to replace? All the above radios have their serial. numbers on the back half of the case. The new case part will not have a serial. number on it. The Icom serial. number plates are riveted on so you could remove it and transfer to the new case, but that would also invite some pointed questions from the officer as to why the serial. number plates had been changed. The other radios mentioned have their serial numbers on self-adhesive labels that would be almost impossible to remove and reinstall on the new case. And I've seen several instances where chemical cleaners, commonly available and used by many people who work on radios, that render the serial. number on the stickers unreadable.

And I'll add that, during the time I worked for the Stillwater, OK Police Dept. back in the Seventies, an illegible or missing serial. number on an item was NOT grounds for confiscation, when there was no proof of a crime. And your answer seems to imply that a citizen has to justify his actions to the police when there is no proof of a crime. Except for the Peoples Republic of California, you are presumed innocent until PROVEN guilty. It is this facet of the U.S. Constitution that has led to the successful challenging of the drug trafficking seizure laws in several recent court cases. As a former member of law enforcement, I'm extremely troubled by the current presumption of guilt by police in their treatment of the general public.

Quote:..Please explain why any legal owner of something would remove or deface the serial number. Betcha can't.
No serial = stolen...."
That is a really stupid statement. Loads of equipent throughout the years to this day have "paper stickers" or glued on plates for Ser #'s. Everyone over the age of 14 has seen an old ser# sticker "fall off" an item. It is sad to know that a state or 2 actually has laws that would let the police LEGALLY take your kid's tape recorder, your radio, TV, bicycle, blender ect, with absolutley NO reason to believe it is stolen, & sell the stuff & keep the money simply because the item may have gotten wet in 1986 & lost it's ser #, or you don't have a receipt for something you bought 12 years ago, or got from an old neighbor at their garage sale.
It's even More scary that there are people like YOU that like a law such as this, & "brand everyone", I hope you live in a state that one day lets a black fiat pull up to your door & the guys start rummaging through your hose & take what they need for the PBA auction ....

Has anyone seen an ad for or had experience with any sort of suspender or vest that will hold an HT up at shoulder level so that the antenna is above the body?? Obviously, i would use a speaker-mike.

I have seen the pack that hold the radio across the chest, but this means the antenna is blocked by the body except for the direction you are facing.

thanks. bob j wb2aiu

On the other hand, I like making $48.00 an hour without getting my hands dirty. That's pretty hard to do in most states. Also, the fact that I own several pieces of property that have more than doubled in value in the last 10 years doesn't hurt either...

Do a little research on your own states' penal code. It will have similar statutes, this is not a California exclusive...

>

Rich, you need to understand that the only time a police officer would have cause to inspect any personal property for serial numbers would be as a result of being called out for a crime or disturbance report.

If your an honest citizen, then you would never put yourself in this position. But if your a low life dope dealer that gets busted for selling out of his house, or a wife beater, or a child abuser, etc. then when the cops show up at the residence to investigate the crime, and notice a bunch of TV's, stereos, camcorders, etc. then you can bet that they will check them out.

No, there are not any "Serial Number Squads", but the law exists to both enable the police to deal with crooked pawn shops, traffickers in stolen property, etc. as well as to provide a deterrent to the "average Joe" that might think a $1000 camcorder for $100 is a good deal (even though it has missing serial numbers) ...

Source record: 56847

I know that prices are predicated upon supply and demand, but some things I just don't understand. About ten years ago I bought an Icom 229H for about $209. It's a great 2 meter FM radio and for what it does, and it does it well. I still own mine and though it has had a couple light bulbs replaced and the mic fixed, it still hums along, and resides proudly now in the shack and works local repeaters and packet stations. Now, I ran across one for sale on one of those auction web pages, and then another and then I started looking for them to see what they would bring compared to a new Icom 2100 let's say for $169 at any dealer new. The going price for the 229H is in the range of $130-$160, well used and not always with the original model of microphone. Sometimes they sell for less without a mic. Why would someone pay around 150 bucks for a ten year old radio that may have been used for field goal practice when they can get a new one with a warranty for $169?? What am I missing here?

You must have bought your 229H used, or someone mismarked
the price. The 229H sold for $300 at most discount ham radio
stores ten years ago.

I was thinking it was around $209. Bought it from Tuckers back when he was selling amateur equipment, and it was new, but in any event, when you can buy a new Icom 2 meter with just a few improvements on the older model for $169 mailorder anywhere, why are resale prices so high on the used stuff? Seems like there is a point at which you throw your hands up and say, hey for a few more dollars, I could have a warranty?

The ego factor. Some people have to win the auction regardless of price.
Others have no clue concerning an items' value in the first place. That is
why EBay is a good place to sell your stuff if you want to get top dollar
for it...

No not refuse to service, but could call you to question the validity of the receipt. Most of Icom's dealers record serial numbers on main frame (Radio) sales receipts. Most accessories do not carry a serial number as they are not generally repairable.

Naw, there are plenty of other places where that's an option, as
well. In particular, my field, Software Engineering, is very
well suited to allow you to work for companies that reside in
other states that pay very high wages, while you can live in a state
that has a much lower cost of living. Personally, I like
telecommuting. :-)

>
>Do a little research on your own states' penal code. It will have similar

Actually, after I saw the OP, I did just that. The only
reference I found to missing/defaced serial numbers was in
regards to firearms.

I understand perfectly that under the vast majority of situations,
the issue is moot. However, there are two things that I find
really disturbing; First, whenever the argument "If you're a
law-abiding citizen, you have nothing to worry about", is used,
I've seen that the issue under discussion is typically something that is
intending to trample on one of my fundemental rights. The second
issue, more relevent to this thread, is that the
police have been given the power to confiscate property, and
sell it, in the absence of any evidence of a crime. Will it help
them to convict people who deserve it, but might otherwise have
gone free? Undoubtedly. But will it also invariably end up

being abused? If the forfeiture laws that used to be so popular
are any guide - the answer is the same. Personally, I'd rather
have the bad guy go free than the innocent guy down the street
lose his stereo because the local police department wanted
to raise a few dollars from the auction.

>No, there are not any "Serial Number Squads", but the law exists to both
>enable the police to deal with crooked pawn shops, traffickers in stolen
>property, etc. as well as to provide a deterrent to the "average Joe" that
>might think a $1000 camcorder for $100 is a good deal (even though it has
>missing serial numbers) ...

Personally, I abhor any laws that assume that a person, for
whatever reason, must be a criminal because they choose to do
something completely innocuous, even though the law has the
potential to catch criminals, as well. Cosmetic modificaytion of
a piece of equipment certainly falls into that category.

Oh the usual stuff since most SN's are on real good stickers; it fell off, was not on the radio when purchased etc. Usually once you told them we would not fix it the owner got real upset about the whole affair. The policy changed so many years back it is hard to remember the excuses. sometimes would make for an exhilarating conversation though.

Maybe I'm missing something here but I understood one of the major advantages of the Jupiter was the ability to easily flash upgrade the system for free from their internet site. It was certainly quoted as a positive point in the QST review and IIRC the reviewer reported doing just that; so it seems an unlikely reason to return the product? It sounded even easier than upgrading the firmware in my PC.

:
: Wrong. It's no urban legend, it's the law. Here is an excerpt from
the
: California Penal Code, most other state have the same or similar
statutes:
:
:
: CPC Section:
:
: 537e. (a) Any person who knowingly buys, sells, receives, disposes
: of, conceals, or has in his or her possession any personal property
: from which the manufacturer's serial number, identification number,
: electronic serial number, or any other distinguishing number or
: identification mark has been removed, defaced, covered, altered, or
: destroyed, is guilty of a public offense, punishable as follows:
: (1) If the value of the property does not exceed four hundred
: dollars ($400), by imprisonment in a county jail not exceeding six
: months.
: (2) If the value of the property exceeds four hundred dollars
: ($400), by imprisonment in a county jail not exceeding one year.
: (3) If the property is an integrated computer chip or panel of a
: value of four hundred dollars ($400) or more, by imprisonment in

the
: state prison for 16 months, or 2 or 3 years or by imprisonment in a
: county jail not exceeding one year.
: For purposes of this subdivision, "personal property" includes,
: but is not limited to, the following:
: (1) Any television, radio, recorder, phonograph, telephone,
piano,
: or any other musical instrument or sound equipment.
: (2) Any washing machine, sewing machine, vacuum cleaner, or
other
: household appliance or furnishings.
: (3) Any typewriter, adding machine, dictaphone, or any other
: office equipment or furnishings.
: (4) Any computer, printed circuit, integrated chip or panel, or
: other part of a computer.
: (5) Any tool or similar device, including any technical or
: scientific equipment.
: (6) Any bicycle, exercise equipment, or any other entertainment
or
: recreational equipment.
:
: *** (7) Any electrical or mechanical equipment, contrivance,
material,
: or piece of apparatus or equipment.
:
: (8) Any clock, watch, watch case, or watch movement.
: (9) Any vehicle or vessel, or any component part thereof.
:
: *** (b) When property described in subdivision (a) comes into the
: custody of a peace officer it shall become subject to the provision
: of Chapter 12 (commencing with Section 1407) of Title 10 of Part 2,
: relating to the disposal of stolen or embezzled property.
:
: *** Property subject to this section shall be considered stolen or
: embezzled
: property for the purposes of that chapter, and prior to being
: disposed of, shall have an identification mark imbedded or engraved
: in, or permanently affixed to it.
: -----------------
:
: When I was "on the job", every time we had reason to inspect a
piece of
: electronic equipment, if it did not have a serial number, it was
taken into
: police custody and checked against all stolen property reports in
the NCIC
: system.
:
: If there were no NCIC hits, then if the person claiming to be the
owner

: could provide proof of legal ownership, the item would be returned.
If the
: proof was not provided within 90 days of seizure, the item was
marked with
: an identifying number by the Police Property Room officer, and it
was
: included for public auction at the next unclaimed property auction.

I'll bet you don't stop at stop signs, too, because they
impinge on your personal freedom.

HRO wrote the serial numbers on the receipts, and as far
as I can tell, always has as a matter of course.

I bought a Garmin GPS 12 which did have a serial number sticker
that looked like it was going to come off -- I retuned it the
next day for one with a s/n sticker that was properly affixed.

Hi Phil,
The crystal you need is part number L77-0485-05. Price from Kenwood is
$23.03. It is an 8.8315MHZ unit and is the same crystal used in the TS-820.
It should be available from Pacific Coast Parts or East Coast Transistor who
are the Kenwood parts distributors. You can get their contact information
from the www.kenwood.com website.

No! that would be blasphemy! If the serial number sticker
falls off, you HAVE to THROW IT AWAY and buy a new one.
OR I'M TELLING!!

Don't kid yourselves. The only reason manufacturers put serial
numbers on is so that retailers can refuse service and get you
to buy something new.

I have even had to "put" serial numbers on equipment that I
homebrewed to avoid trouble.

Now if authorities don't know the difference between the
original and one put on by a scratch awl... I'll tell you what
else, you could burn your house down with all the receipts
you have to keep for ten years.

I'm not going to say you are wrong, Gary, because I do not know what Tucker's price was back then. I am familiar with what the rig was going for in the Delaware Valley's ham stores. They did make the 25 watt 229, which I'm sure sold for considerably less than $300.

Now that we have national and international internet communications, it is getting easier to sell older gear at a good price. There was a time when all we had for prospective customers were the locals on the repeaters, maybe a club and possibly an amateur equipment shop's bulletin board. While fifty or sixty dollars may not seem like a lot to many of us, it can make the difference between having a piece of amateur radio gear or doing without in some instances.

Still, I do feel that there are lots of inactive amateurs cruising eBay that have not stayed current with pricing and are buying on impulse. It's the only thing that I can think of that could explain this bizarre behavior.

My first Icom IC-706 cost me around $1,300 some years ago. Who would have guessed that the latest version would sell for less than $800?

Put the 5K down on a house of your own.

Do not run 500 watts into an attic antenna in an apartment. You will be lighting up all kinds of cheap electronic crap. Nothing anymore is made to resist electronic interference. Especially troublesome will be stereos and cordless and corded phones.

Phil

> 73 de W6DKN

It can also be from too eager bidding. Many times you will see stuff
listed for a decent reserve, but many will start bidding on it early
and the price gets pumped up if some that bid lose their senses. I
wait until the very last minute to bid. And I only bid if the price is
decent. I don't buy much off e-bay, but I did buy a vintage gibson
geetar off there about 5 months ago. The seller posted a startup
minimum bid, and I waited until about 5 min before closing. There were
no other bids. Now if I had been itchy and bid early, it would likely
have attracted attention, and the price would have gotten pumped up.
Once an item gets into a bidding frenzy, I'm gone. As far as the
original question, I'm with him, I'd buy the new radio any day over a
10 year old one unless there is some special reason to get the old
one. The new ones do more in general and it's not "pre-beat" for you.

Maufacturers need to identify equipment under warranty. So, they
only need serial numbers to remain in place until the warranty
period expires.

This is a good way to win, but I'd recommend timing it even closer than that. I've placed bids with 10-15 seconds left and won every time. You need to be right on top of the timing, but it works.

1. Micor Mobile, no xtals, no cans, wires for controller, on Ham band, good condition
Price: $50

2. Motorola repeater in a 6' cabinet, now on 442mhz, 300w output from a PA Tube, no cans
Excellent condition. Pick up only. Price: $125

3. Micor mobile on ham band 447.325, PL 127.3, 100w, no controller, no cans, bad recvr.
Price: $50

4. MSY Motorola repeater, 450-470mhz split, will not do ham, no cans, not tested as is.
Price $50

5. RCA 700 full repeater w/multi pl deck, 4 cans, on 447.325mhz now, 4' cabinet, 30w tube PA
Price: $150

6. RCA 500 4' cabinet, solid state mobile mounted 450-470mhz will not do ham, multi PL deck, no cans
Price: $50

7. 2 complete sets of 4 can band pass band reject duplexers now on 447.325mhz
Price: $100 each

We are in Las Vegas and, as you can see, some of this stuff is pretty big so shipping is most
likely out of the questions for these prices. As you can see all this totals up to $575. If you
want to make arrangements to pick up, and take all as a package, we will get rid of it for $400

Reply to n7rcm@pobox.com with questions or more info.

That is correct, the VE's have to accomodate you. You will likely have
to get hold of them ahead of time, so thay can prepare for your testing,
but they must accomodate.

Now the thing I was wondering about is what were the circumstances that
you did not know that the test was already done using Farnsworth? This
method has been pretty standard for quite some time now. There has been
a discussion on the rrap newsgroup about this, and I was curious.

Personally, I prefer to stay in this world as long as
possible, so that I can continue in the struggle against
people who lack common sense. ;-)

You can't equate a cosmetic modification to a piece
of equipment to something like obeying stop signs.

>HRO wrote the serial numbers on the receipts, and as far
>as I can tell, always has as a matter of course.

Apparently not consistently. The receipt for the
FT-8500 I bought from them several years ago doesn't
include one. (The DE store.)

Doesn't have to work for me. Only has to work for the judge or
jury. If you can convince them that missing serial number means
nothing at all you're a pretty slick talker. Most folks know
better.

I've only served on one jury in my life, but I was impressed by
the common sense shown by folks when the situation becomes real
as opposed to hypothetical discussions like we've been having.
Your arguments would be tossed out in a heartbeat.

Well, while you are out making cosmetic modifications, take all
those pesky VIN tags off your cars, too.

No one is talking about a 40 year old collins, when the rules were
different and society was a little more civilized. I'm talking about
a modern, current HT. Not a heathkit with a stick-on tag, although
all my heathkits still have their stick on tags.

On this point, I have to agree with you. This is especially true of the gun
laws, especially those here in CA.

> The second issue, more relevent to this thread, is that the

> are any guide - the answer is the same.

The key point your making here here is the application of these statutes in cases where there was no prior crime having been committed. In every case I have personal knowledge of where the serial number statute was enforced, it was a secondary charge that was a result of the person having comitted a prior crime which caused the courts to issue a search/arrest warrant in the first place.

Does the possibility exist for any law to be abused? Certainly, but these laws dealing with forfeiture of properly are most always secondary filings against persons who have committed major crimes in the first place. As for the serial number statutes, the only times I saw it applied were when a raid was done on a dope house or gang building. It was very common to go into these places and find whole rooms stacked to the ceiling with stolen electronics which had been traded for drugs.

> Personally, I'd rather have the bad guy go free than the innocent guy down >the street lose his stereo because the local police department wanted

I agree here. But "the innocent guy down the street" would never have a problem with his lack of a serial number on his stereo unless he decides to take up dealing drugs or fencing stolen property.

Agreed. The reason I originally entered into this thread was to counter the original post that erronously advised that serial number laws were an "urban myth" ... Again, I have no knowledge that this CA law has ever been applied to anyone as a primary or only criminal charge.

1188. Kenwood TS-2000 and Kenwood TH-D7AG KISS mode TNCs

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-23 17:21:51 UTC
From: WH <whrudey@hotmail.com>
Message-ID: <3b5c600c$1_5@goliath.newsgroups.com>
Source record: 56792

Hi All,

Has anyone successfully used the KISS mode feature of the built in TNC's of the Kenwood TS-2000 or the THD7AG radios?

I am about to purchase both of these radios and I would like to use them in a KISS mode configuration to allow the host computers connected to them to use host software which requires KISS support.

Kenwood tech-support indicated that the TNC's are pretty basic but they are supposed to support KISS mode. However, in a contradictory statement, they indicated that it does support KISS but does not support binary transfers. A standard KISS mode TNC should support binary data due to the data escaping mechanism in the KISS protocol spec.

Any advice/comments would be hugely appreciated!

I have a Mirage BD-35 2m/70cm (144/440) amplifier that I would like to trade for a 6 meter amplifier. The 6m amplifier must be able to accept 5 - 10 watts in. The output power is not too important, but it should be at least 35 watts or more.

The Mirage amp has not been used by me and I can not verify it's function, but I was told that it is in complete working condition and so it is guarenteed not DOA. This amp retails for $135. Check out Mirage's website on it: http://www.mirageamp.com/mirageamp/products.php?prodid=BD-35

Sure - why not?

Obviously it would be a dumb thing to do, especially if the car gets
stolen and chopped, but should it be illegal to do so? SHould your
car be sold at auction if you did?

Well, the laptop that I'm looking at right now (Dell Latitude
has a stick-on tag. Not to mention my Elecraft K2 with the
self-applied tag. :-) If I still owned any commercially-made
amateur gear, I wouldn't be surprised if most of them used
paper labels, as well.

I suppose, but at least it has the potential to do what you want as
against others where you are stuck with what you buy.
Still not quite sure which way I'll go, but I like the idea of perhaps
being able to overcome the shortcomings of whatever I buy rather than
having to sell it and try something else.

Anyway, the search for the ultimate tool continues and everyone's
comments are appreciated by me and the others who I am sure are
following these threads.

Thanks Ed--but it worked fine on FD. Intermittent problem did not surface.
Had the problem before and after FD. I don't think it is supply related or
antenna related, because I have other rigs sharing. I have even swapped
coax jumpers. I looked in the radio and all seems sound. Solder to the
connector looks and feels solid.

Seems to me that we need to keep in mind that, so far, no one has come out with the "universal radio" containing all necessary hardware and "assembled" into a particular configuration by software/firmware to perform certain functions in certain ways. That is a very poor attempt at stating the notion of a "software defined radio."

I think that the ultimate receiver will be one that places a high-speed AD converter virtually at the antenna input terminals and then proceeds to deal with the incoming signals solely in software until hardware is required to present the output to a human or another device.

So far, the AD converter has made it to the front of about a 40 KHz second or third IF conversion with conventional circuitry and devices doing all the up-front work in hardware - business as usual.

Any of the current radios, including the now defunct Kachina 505DSP, are ultimately limited by what they can be configured to do by their hardware design and capabilities. With our present technology there is a limit to what features and functions can be added to a specific hardware design with a firmware change.

So, it is a little on the wishful thinking side to expect the Jupiter or Pegasus or any other such rigs to be upwardly upgradeable on a semi-indefinite basis. True, there is a lot that can be added and changed ("improved") in the firmware, but there are limits placed there by the associated hardware. Eventually, the basic radio will require replacement in order to obtain the "latest" features and performance capabilities.

Another aspect of software/firmware upgradability concerns the longevity of the model design and even that of the manufacturer. I am sure that by now everyone has heard that Kachina has abandoned their amateur radio products, including the hundreds of 505DSP models that were sold to a large extent on the promise of firmware upgradability to provide the essential features and functions that were missing from the initial release. It didn't happen while the radio was in production and now it won't happen at all. Three years (introduced at Dayton 97) or so is a pretty short lifetime for an upgradable system . . .

Hopefully, we will see TenTec in the ham radio business for a long time to come. But even they can only do so much given a specific hardware configuration and set of capabilities. Even the Jupiter can be upgraded only so far . . .

But, just wait until we can afford AD converters that operate at a few hundred MHz to 24 or 32 bits of resolution cheap enough to put into consumer-grade electronics!

1202. Re: You don't have to test with Farnsworth (Was: Sure Fire Way To Learn Code?)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-24 01:35:33 UTC
From: "George, W5YR" <w5yr@att.net>
Message-ID: <3B5CD0D5.C46469F2@att.net>
Source record: 56706

As a former professional code instructor and a (mainly) CW operator for about 56 years now, I observe that the principal difference between a 5 wpm code test given "straight" and one using "Farnsworth" spacing involves (a) how one learned the code and (b) what one is attempting to gain with the test.

The main point to a straight 5-wpm test is that the individual characters are slow enough to allow a mental translation - counting of code elements - and a table lookup to decipher what is being sent. This is appropriate to one who has probably learned the code in that fashion only to the point of character recognition - through the translate and look-up mode - for the sole purpose of passing a test. This person probably has no intention of ever using CW as a means to communicate. And,in fact, this person will find an early and potent barrier to progress much above the 5-wpm level. These are the poor unfortunates who "have to relearn the code" in order to make any progress.

On the other hand, the Farnsworth approach favors the person who has learned the rhythm and sound of the characters to the point of more or less automatically associating the incoming sounds with their identity as alphanumeric characters. This is the person who has learned the code in order to become proficient with it and progress beyond a 5-wpm level. This is the person who will later on find operation at 25-30 wpm both natural and comfortable.

I applaud the ARRL and other VECs for choosing the Farnsworth approach as the standard since it clearly promotes better learning and preparation for the test, and it prepares the individual for a amateur career using CW.

In the years that I taught CW for the military, I was allowed the exceptional privilege of using my own teaching methods as opposed to the standard military approach of mindless drill, drill, and more drill. I passed classes in half or less the allotted time, and upon subsequent testing in later phases of their military training, they showed greater retention than other students in training.

The cornerstone of my approach was to instill the rhythm and sound of the code characters using every one of the human senses that I could. The only area where I feel that I failed was that I could never invoke any aroma to the characters!

It worked . . . and the key was that each character was introduced and taught and initially practiced in what is now called the Farnsworth method. To me, it was simply the only way to ensure that the rhythm of the character was being maintained and learned and not some association with a

lookup table. At the time, I had never heard of the Farnsworth method, but I am glad that it has achieved some recognition. I can attest that it works!

Don't recall anyone asking for the 'ultimate radio', I think the subject
was 'best bang for the buck".

Can't really argue with any of the below, but I would like something to
use while I wait for the 'ultimate radio', my hair has been grey for
some time so I can't wait too much longer. Although I have been tempted
by some professional receivers; they are only part of the solution.

However I do have a PK-232MBX; and despite the manufacturers demise I
understand support is still available, so products do get support that
outlives their creators.

It is an interesting discussion - more interesting than many I hear on
my radio.

I have to agree with Dave Edwards - and I doubt that the guy on the
other end has any idea if I'm using a second hand HW101 or the latest
$10,000 rig.

The general point at issue is the lack of any identifiable numbering or markings on commonly stolen items. The CA law doesn't prevent you from making your own mark on the item, i.e. SSN or DL number in lieu of a lost or damaged factory serial number tag. In fact, a lot of PD's have programs where you can either take in your valuables for marking, or they will loan you an engraving tool so you can do it yourself. (Vehicle VIN numbers are a different issue, you must go through the DMV to deal with that issue)

It's only in cases where the identifying numbers or markings (factory or otherwise) have been removed or defaced with intent to prevent tracing of ownership that enforcement of the statute takes place.

Remember this little thing from Criminal Law 101 - It takes both Act and Intent to constitute a crime? Juris Prudence in CA - or any other state for that matter - requires two elements to coexist before a person can be convicted of a crime.

You must be able to show the court that the person committed the act itself, as well as be able to prove the person's intent to commit the crime, before any prosecution and/or conviction can occur. You could possibly be detained and questioned solely on the act itself and the circumstances whereby it was discovered, but no DA in town will file for prosecution unless they feel confident they can prove the act was committed with criminal intent.

Greetings all, I have a Kenwood TS50 and a Kenwood SM220 monitor with
the panadaptor. I was wondering if anyone has accessed the correct IF in
the TS50 and successfully hooked it up to the SM220.
Thanks in advance
William F. Hagen

1210. NEED Icom IC-211 parts

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-24 05:57:57 UTC
From: FJose <eb5agv@ctv.es>
Message-ID: <3B5D0E65.8D8DF934@ctv.es>
Source record: 56714

Hello!

I am restoring my second IC-211 (yes, you can call me mad ;-)) and
in the mail there is a third unit (now you are sure I am mad :-)).

This unit (my second one) is almost working now, but it is missing
the synthesizer upper metal cover. I know lots of IC-211s have death
due to the custom LSI chip in the synthesizer unit so I wonder if
somebody could help me selling the cover or the complete damaged
module. I would consider also a parts unit. Please, e-mail directly
as I lose some of the group messages.

Thanks for your help!

JOSE

Provided, of course, that someone who's willing to pay more than you doesn't actually bid what they're willing to pay (as EBay suggests). I have beaten a couple of last-second bidders that way. And since they are last-second bidders, they don't have a chance to rebid to try and beat me.

Actually, from my experience, different areas (Computers, Ham Radio, Books, clothing, etc) seem to have different bidding flavors. The Ham Radio, and to a slightly lesser extent, the Computer area, brims with cutthroat last-minute/last-second bidding. Books and Clothing, much less so. It also varies with the popularity of the particular item.

If you're looking for something in particular, it pays to do a bit of research. One probably underappreciated feature of EBay is the ability to search completed auctions. It only gives you the last month's worth of items, but if you item you're looking for occurs much, you can quickly get an idea of what the item typically goes for. E.g. I recently decided to get one of those Palm folding keyboards. After losing a couple of auctions, I went and checked the completed auctions. While the winning prices varied a bit (a few people got some real bargains on this item), it became obvious that the typical winning price was higher than what I had been willing to pay. I adjusted my bidding upwards a bit and managed to win one earlier today (at a price in the low range of the typical winning prices, to boot).

If an item has a fair bit of supply, it also helps to load up your watch list with other auctions for the same item. That way if you're outbid, you can evaluate whether it's better to increase your bid on the current auction, or to switch to one of the other auctions in the watch list. As a matter of fact, I'm trying to get myself in the habit of throwing auctions in the watch list first and then *later* selecting an auction and bidding. More than once I've bid on an auction and then as I've waded through picking up more auctions, I've found one that's a better deal (lower fixed shipping, in better shape, etc). There you sit, muttering "Somebody *please* outbid me on this first auction, so I can switch to this other one". Better to collect a bunch, evaluate them, and then select one for bidding on.

That can happen. The geetar I bought was a 2nd of that type for me.
The first was a 59 that I bought about 15 years ago. I sold it, and
regretted it ever since. So I decided to find another one. I found a
60 model that is exactly like the one I had before. Being I had
already made up my mind to buy one, I was ready to cough up the cash
if needed, but I think I got a fairly good deal.
But I know about that "gonna get it at any price" mindset. For me it
was worth it as I got a real clean specimen that is in better shape
than the first one I had. But I paid almost three times as much for
the 2nd one. But thats fairly normal these days with older gibsons.
The prices have gone though the roof. The bad part is now I'm having
trouble with cubital tunnel syndrome and can hardly play the dang
thing for too long before the hand pain sets in. About my luck...It's
sitting at this stupid puter and radio desk for with my elbows on the
table all the time that is causing me problems. I may have to have
surgery if this stuff doesn't clear up. If the nerve dies I'm up the
creek. Will cause permanent damage. Really is the pits. Also have had
two broke fingers on my fretting hand that act up. I've spent the last
25 years playing geetar, and about the time I get halfway decent I
become a cripple...:(Typical luck for me... MK

Source record: 56718

Prices have come down. Imagine that. A lot of it has to do with the dollar-to-yen ratio between here and Japan. But while an equivalent 2-meter rig may cost less today than one did 10 years ago, look at HF rigs!

I purchased a Kenwood TS-530SP in 1984 for $639.95 at HRO.
Today, its equivalent -- the TS-570D -- sells for $1,099.95 at the same store.

Sure, the 570 has more features than the 530 did. But that's not the point. The 570 is the current manifestation in the family line -- 520, 530, 440, 570. And I guarantee you the current lineup of 2 meter radios (which cost less than their predecessors) have more features -- i.e. more than twice the number of memories, extended receive, etc.

BTW, I still have my IC-229H in my car. It's been through hell -- it lived to call for help when I totaled a car in 1992 -- but still chuggin' along without a problem. And it was a feature-packed radio for its time, or even by today's standards -- tone encode & decode built-in, extended receive, even autodialer memories in the microphone -- and one feature I don't even see on my 3-year-old IC-2000H -- an attenuator! Helps when you're foxhunting.

I purchased an Icom 735 in about the same year for around $1100. Nowadays, the 746 runs about $1200-1300, while the 706miig is about $900. Seems to me, prices have stayed about the same.

Of course, every rig has what the marketers call, I believe, a "delta," the price range it will cover, from when it is introduced until when it is discontinued. You may have gotten the 530 later in its delta... I believe the 430s where the mainstream rigs for Kenwood around 1984.

You might like to read the "TEN TEC TOUR" article on www.eHam.net that has some insight into the Jupiter's differences. Both the Pegasus and the Jupiter have 1 feature that I am having trouble living without... Right now you have to tune from one end of a band to the other to see what is going on. The Ten Tecs have a graph that shows the entire band .. End to End ... and all the activity is represented by "spikes" on that graph! You can see the whole band at a glance and click on each spike to monitor it's respective signal.
This is cutting edge technology! Johnny W4XKE

1230. Help with 2 meter mobile setup

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-24 20:05:03 UTC
From: kl465@yahoo.com
Message-ID: <81e10905.0107241205.64844ab1@posting.google.com>
Source record: 56734

I seem to be having a bit of a problem with my mobile 2 meter setup that someone hopefully can help me with. I thank in advance anyone who might be able to give me some advice.

Today, I was testing my mobile 2 meter setup. This consists of an Icom IC-W32A transceiver, a Mirage B-34-G VHF amplifier (5 Watts in gives approximately 35 Watts out), and a Comet M-24M 2m/70cm dual band "cellular style" mag mount antenna. I drove out to a spot approximately 4 or 5 miles away from a local repeater. I figured that I should be able to transmit to the repeater fairly well from this spot since I have heard other operators reach the repeater from their mobile stations without any problems from this vicinity (and from much farther away as well). Using a scanner tuned to the repeater output frequency so I could monitor my transmissions, I started out by testing the IC-W32A connected directly to my Comet mag mount antenna. With the radio set on the "high" power output of 5W, my on-air test was barely audible on the repeater as it was full of white noise and could not be understood by anyone listening to the repeater. I then connected my Yaesu YS-500 SWR/power meter between the radio and the antenna and measured the forward power to be approximately 4.5 W and an SWR of about 1.75:1--these readings did not seem too bad to me. Next, I added my Mirage B-34-G VHF amplifier to the setup. After running another on-air test through the repeater using the amplifier, my transmission did not sound any better (actually, I think there may have even been a bit more white noise and crackling with the amplifier in-line than without it). I connected my Yaesu YS-500 SWR/power meter between the output of the amplifier and the antenna. I measured forward power to be approximately 30 W and an SWR of approximately 2.25:1. Obviously, the addition of the amplifier did not help my system at all.

Would anyone have any ideas as to what might be causing these problems with my system? Like I mentioned before, I know that others can easily reach the repeater from their mobile rigs from the area at which I conducted my transmission tests. It seems that since I should really be able to reach the repeater using only the 5 W output of the radio and the mag mount antenna, the problem might be with the antenna. However, could there also be a problem with the amplifier? Possibly even my radio?

I just looked up the specs for my Comet mag mount antenna, and for 2 meter operation, the antenna operates as a 3/8 wave with 1.7 dBi of gain. For 70 cm operation, the antenna operates at 1/4 + 5/8 wave and has 4.1 dBi of gain. Interestingly, it seems that, as far as SWR and output power, I get a much better SWR from my system when operating at

70 cm (frequently at or below 1.5:1) and less reflected power than at 2 meters. This leads me to believe now that maybe my antenna doesn't operate so well on 2 meters. Should I maybe try a 1/4 or 5/8 wavelength 2 meter antenna with my system?

Again, thanks in advance to anyone who may be able to offer some advice!

Just stating a few things to check first as I have seen it hapen. Are you sure that you are really going through the repeater and not using the reverse offset and transmitting on the repeater output ? Your scanner in the car will probalby be so desensed that you can not listen to your own signal through the repeater. You need to seperate them by several hundred feet or so. You might try another quick and dirty antenna by sticking about 19 inches of wire (coat hanger or any kind of stiff wire) in the coax plug on the rig or amp and seeing if you get into the repeater any beter.

You can forget about the db gain of the antennas. The numbers for the ham antennas are for the most part just made up to look good on paper. Depending on the location of where the repeater is to where you are at almost any antenna that will resonate in the band could be beter than another. In one expirment several of us did was to take all the antennas that we could find that would fit the same mount and change them while checking the receive strength of several repeaters in differant directions. No one antenna worked beter on all repeaters. Even a 40 meter whip on the car did beter on one or two repeaters.

Looking for a clean Motorola 99ch MT-1000 VHF that will cover at least
146 to 162, prefer to 174. Let me know what you have. Can trade Saber
UHF, ??? or pay cash.
Thanks,
Mike.

1233. Yaesu FT2700RH question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-24 20:51:16 UTC
From: joebramblett@drunkenbard.com
Message-ID: <78851095EE13C8B4.0E33B8FC97C70ADC.BEB8A472478BE2D4@lp.airnews.net>
Source record: 56736

I passed on my FT2700RH to my girlfriend recently, and I'd like to eliminate this issue so she can learn the controls without having to worry about the strangeness; it occasionally muffs the offset frequencies of memory channels.

It only happens to channels stored as transmit/receive pairs, and it always adds -600kHz to the transmit frequency. For example, when set up for the local 146.88 repeater, it tries to transmit on 145.68 instead of 146.28. On positive offset channels, it tries to transmit on the receive frequency. This all happens regardless of the offest switch position, and when I go in and manually reset the transmit frequency for one memory channel, all the others magically fix themselves.

Anybody seen this or have an idea of what to do about it? It only happens maybe once a week, so the radio is still quite usable, but it's annoying when it goes unnoticed until you're in traffic.

Kind of like puter hardware. The longer you can hold out, the cheaper
the price of a new rig will be. Also, I bet when the pro2 comes out,
the pro1 will take a quick price dive. May not be huge, but should
drop a bit. MK

1238. Speech Inverter (Inverseur de voix)

French au bas :

Hi, I'll explain you my problem. My city's police department crypts now her radio communications with a speech inverter system. For example, all sounds over than 1700Hz are reflexted under this sound frequency and opposite for the sounds under this frequency. I want make a little electronic system to decrypt this transmissions. It's for this reason that I need your help to know what kind of electronic piece I need... Thanks. If you may send me a plan or an exact procedure who to do it. Thanks!

M. Heppell

Please send me your answer to mheppell@sympatico.ca

Bonjour, je vous expose mon probl�me. La police de ma ville crypte maintenant ses communications radio avec un syst�me d'inversion de la voix. C'est � dire que, par exemple, tous les sons plus aigus que 1700Hz sont invers�s vers le dessous de cette fr�quence de son et le contraire pour les sons plus graves. �a donne un genre de charabia au lieu de la parole normale. Je veux d�crypter ou r�inverser pour pouvoir d�chiffrer ces transmissions. C'est l�gal au Canada seulement, il faut trouver comment les d�coder. C'est pourquoi je fais appel � vous pour trouver quel pi�ce �lectronique peut faire ce travail. Comme �a, je pourrais aller l'acheter et la brancher sur mon balayeur d'onde au lieu d'acheter au magasin un appareil qui fait ce travail et qui co�te plus de 150$ (750 francs). Merci d'avance!

M. Heppell

Svp envoyez-moi vos r�ponses au mheppell@sympatico.ca .

Is that a real-time, on-going band activity display; or, is it obtained by
the receiver "sweeping" the band and storing the signal levels vs frequency
on the display?

The sweeping and store approach is hardly cutting edge . . . <:}

But, you are right - after using the IC-756PRO with its real-time
SpectrumScope for nearly a year now, it is hard to do without it!

Source record: 56746

Someone here asked if the latest atomic clocks will work in a basement. Well, I put one of mine downstairs on a table in the middle of my basement and it's been working fine for the past 5 days. I bought the unit at Sam's Club for $23. It displays 12/24 hour time (hours and minutes with a flashing colon), month, date, weekday, indoor and remote (via a wireless outdoor-able transmitter) temperature. Optionally the indoor temp display can be changed to real-time seconds or the year.

These units are by far the least expensive you can buy. I've seen units advertised on the web that do less for over $50.

Hope this helps someone.

Bob M. WA1MIK

Bob,

Any chance I could make some sort of a deal with you to pick me up one of these units and ship it to me? I would be very happy to prepay for it if necessary. We have no Sam's Club here (although we DO have a Wally World in Seoul)... I may not be able to get WWVB here, but there is likely a similar station in Japan (JJY?) and I could use it when I got home too. The temp sensor alone makes it almost worth the money. :)

The Pro II will not be around till end of year. Improvements are not that
big.

Price will drop on the Pro and has already started. AES is now selling the
Pro for 2399

From what i see for improvements
I'll buy the reg Pro after price drops a little more.

Steve

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

FYI...

The Pro II will not be around till end of year. Improvements are not that
big.

Price will drop on the Pro and has already started. AES is now selling
the
Pro for 2399

From what i see for improvements
I'll buy the reg Pro after price drops a little more.

It would be great if they made one of these clocks to for the 10mhz and
15mhz WWV signals, like the old Heathkit clock. You can just about receive
these signals anywhere.

These clocks are exclusively for North America, in that it will ONLY receive WWVB on 60KHz, and an owner can only set the time zone to one of the four used in the continental US. So for a lot of money, all you'd end up with is an indoor/outdoor thermometer.

There are other sources for clocks, but they may not be as inexpensive. I only know about the ones that work in the US. There are a couple of time signal transmitters in Europe, so there must be some clocks around that will work in other places in the world.

I have no idea how much it would cost to ship one out of the country, not to mention any customs problems. Given all of this, is it still worth it?

"Cutting-Edge Technology?"

The ICOM 746 has had that same feature since it came out in 1998. And its sweep range is variable -- from 0.5 to 25 kHz. Yes, it's the "sweep & store" kind of band scope, not like that in the 756 -- but it's very useful for checking out the band or seeing what's going on nearby.

Once you sell it there will be NO warranty. Icom warranty
is to the original purchaser and is NOT transferable.
Thus you are offering a radio with NO WARRANTY left
not one with "10months left" Since your "firm" asking
price is well above the street price for a new one I
suspect you will may actually get to enjoy the remaining
warranty.

1) I won't be in Korea forever..
2) Having it set for a US time zone is no big deal either, as I have a clock that I keep on Pacific time, and this could replace that one.
3) My address is an APO address, and as such is a US address. There would need to be a customs tag on it, but only as a formality. There is no problem with me getting most anything here.
Let me know if there is a possibility to do this. TIA

Those are Canadian dollars, right? And $3400 Canadian translates to $2,213 in American currency. With AES now selling the Pro for $2395, new, with full warranty, that could be a tough sell on the used rig.

I am trying to figure out how or if a Communications Specialists TE-32 tone encoder can be hooked up to a Kenwood TR-7930. I have tried CSI but the only hookup they have for this radio is for one of their smaller tone boards. So does anyone have any clues as to whether or not I can hook up the TE-32 to my rig? Yes, I realize that there is/was an optional tone board for the kenwood (and I could buy a new radio:-) but it is way too limited for what I want to use it for. Any info is appreciated, thanks!!!!

I owned a 530SP and used it until replaced by my 570D. I got the 570D when it first came out and I think it was a bit closer to $1295. I know prices have come down, and the G version has been out for awhile. The 530SP was a great radio and needed tube replacement only once that I recall. I think that the 430 came out a little later--1985/6. My 530SP wqas set up to just pull a wire to enable WARC.

Very good comments in the thread. I appreciate the responses.

Hello all,
Lower reserve than before!!!!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1257657582

This auction is for ONE Milcom 900 Mhz linear Amp.
Model #P15-05LI-C1
Power in= 150mW
Power out= 150Watts

This is the mother of all amps. Milcom has designed a great pre-amp, so you only have to drive it w/ 500 mW. As you can see in pic #1 this was on 935Mhz, so it should work well in the 900 ham band. I think this unit was last used for some kind of linking. Milcom made this for Uniden.

Let me know if you have any questions and thanks for looking.

Adam / kc7ljq

I would wait till the final testing is done and the receiver numbers are published. Secondly you will avoid the inevitable debugging process. Besides the changes to the PRO are only cosmetic and don't seem to be a major upgrade.

The first thing is that there EBS is totally useless and should be turned off. It interferes with the tuning of the AMP, and causes splatter. You can hear the EBS artifacts on most who use this EBS on their amps.The only other thing wrong with these AMPS is the 4cx1600B tube. Its availability is marginal. Secondly the close spacing of the electrolytics in the power supply module is not really good. They use 85 degree C rated caps which have short life with heat exhaustion in such a small space.The next thing is that they dont have filament voltage regulation. Which no other amps has, but is a oversight theses days for a new amp design. In the bigger AMP the DX 3, i dont like air spaced variables for such power, it really should be a vacuum variables. Besides such extra power is of marginal benefit since most who can afford such devices are running much much more than this. This thing is a toy, 10logpower1/power2. The power supply for such a amp should be a resonant choke supply. If you going to buy a amp of such high power the Henry 8K is better, likewise the Creative electronic amps. Its a pity they dont make a dual 4cx800 amp like the Alpha 91 because the tubes can be got for a good price. The excuse they used when i enquired was they cant get perfectly matched tubes, they dont seem to have heard about about cathode resistor equalisers. But the main main reason is that it interferes with their control board operation. Other than that the construction is superb and is equal and in most cases better than most other Amps including the Alpha. The Acom gets my vote for the best Amp. One thing i will also add about tubes. Just remember what has happened to the price of 8874s, 8875s and any other oddball tube prices. Amps like that Dentron MLA2500 and Alpha 76,78 etc series are not worth much because of tube prices. I would also add that Svetlana is in financial trouble and who knows what the supply of all these oddball tubes will be like. No big deal for a homebrewer but you cant buy Eimac equivalents of these tubes. Its a darn shame they dont have a Eimac Tube in their range.

Yes i realise this fact. Thats why i was saying a WWV version would be nice especially 10mhz and 15 mhz. My Heath can receive these signals anywhere better than the low frequency signal.

Well, a LOT of people care, , , ,
If you want a good reliable connection.
First of all, you are wrong.
It is NOT intended to "seal" a connection.

When done properly, the solder forms an intermatallic bond with the
metal component lead or land, and the solder. This is what makes a
reliable solder joint.

Ron C.

1278. 2 meter 1/4 wavelength antenna recommendations

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-25 18:02:24 UTC
From: kl465@yahoo.com
Message-ID: <81e10905.0107251002.63e82baf@posting.google.com>
Source record: 56632
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

First, I'd like to thank those who responded to my post titled "Help with 2 meter mobile setup". I tried my Icom IC-W32A again today from the same location, and with the rubber duck antenna, I was able to hit the repeater easily at only 500 mW (yesterday, with my mag mount, I wasn't able to hit the repeater at 5 W or even 35 W). This leads to my conclusion that the problem lies in the mag mount antenna--probably an internal break in the coax. Instead of repairing that inexpensive mag mount antenna, I think I'd like to step up to something a little nicer.

I've been looking at the Larsen NMO series antennas, and I'm thinking about getting a Larsen NMO mag mount and a Larsen 144-148 MHz (single-band) 1/4 wavelength antenna (specifically, the NMOQ-B antenna). I was curious if anyone has had any experience with the Larsen NMO antenna series, particularly their single-band 2 meter 1/4 waves. Any input or opinions on the Larsen NMO single-band 2 meter 1/4 waves would be appreciated.

The other thing I like about the NMO series is that, if I'd like, I can purchase an NMO 144/440 dual band antenna. I noticed that most of Larsen's 144/440 antennas are described as being "center loaded". What exactly does the term "center loaded" mean, and should I stay away from "center loaded" antennas or are they as good as a non-"center loaded" antenna? Again, any information or advice would be appreciated.

Thanks in advance for anyone who may be able to share some information!

You could build one for under $10, if you so desired...

http://www.csotbs.org/kc8rkq/coathanger.html

Make sure to hit both parts one and two, important changes were made in
the second iteration of the antenna, which brought it more into where
you'd need it to transmit.

What in the world is an intermatallic or intermetallic bond?

> metal component lead or land, and the solder. This is what makes a
> reliable solder joint.

Take your irrelevent "component" talk elsewhere. This thread was
about splicing wires, hence Bill's original concern about solder
being a weak metal.

The connection is made by the secure mechanical connection BEFORE
soldering. The solder exists merely to stop the corrosion and other
problems which would ruin the mechanical connection.

You can verify this by mechanically disassembling such a soldered
connection. The original contact areas will be solder-free, because
solder does not permeate the gas-tight connection made when things
are mechanically secure.

Texas Instruments DSP Development Board:

The SW6x100 is a high performance, low cost daughterboard designed to work with any of the Texas Instruments 6x DSP Development Kits. It provides the components needed for rapidly prototyping a wide range of RF/IF applications. The daughterboard plugs in to any of the Texas Instruments 6x DSKs and provides a wideband analog interface for RF/IF product development. The SW6x100 comes with software drivers, example source code written in C, and an example project that uses the DSP/BIOS real time operating system to help you jumpstart your project.

Developers working with software defined radios may be interested:

It is relatively easy to do. Simply get an audio mixer hybrid device
(pair of coupled transformers). Feed the scrambled audio into one port,
and a 1700 MHz carrier into the other. Amplify recovered, descrambled
audio at the output port. Many years ago, when these were the cheapest
and simplest scrambling means available, we discovered how easy they
were to defeat, and moved on to more complex analog "rolling-code" type
scramblers. Of course nowdays, most voice encryption is digital, and
difficult to decrypt without a very sophistocated computer. But for
police work, only privacy, not true security is needed, so DES mode
encryption works just fine for 99% of applications.

Having both the Heathkit and the 60khz clocks, I have to say the newer ones work FAR better than the Heathkit as far as reliablility of the signal. More often than not, the Heath will not sync without an external antenna. The Radio Shack 60khz one I have is hung on my basement wall, and reliable as can be.
Sure wish someone would make a nice LED station clock that syncs to WWV. I think a lot would sell. The LCD jobs are functional, but junk!
The analog WWV movements for twenty bucks are great! I refurbished 7 quartz wall clocks with the movement already.

The biggest addition is the "on the fly" choice of either narrow or wide filter slopes. Also, the noise blanker is variable (but if it works like the current Icom NB designs, this feature is mute). Also rumored are better third order IMD numbers, and the voice recorder is a one touch front panel button rec/play, and will be able to transmit off-air recordings.

Since these features are mostly firmware, hopefully current Pro owners may be able to obtain an updated e-prom ???

In any event, even without these "new features" it's still the best HF rig I have ever used...

Source record: 56550

Even with an outside 15MHz antenna, my Heath clock is "out of sync" probably 50% of the time. Now, all that means is that it hasn't gotten a good signal to sync with in the past 24 hours, but it's still usually accurate to a fraction of a second. It does get very hot, it uses a lot of power, and is very unforgiving about the slightest power glitch. I have mine running on my computer system's UPS, along with my VCR.

I wonder if people who live in Colorado can even receive WWV with the internal antenna on the Heath clock?!?!

I agree, an LED clock would be nicer than the LCD units that we now have, since no illumination is necessary. However, look how much we paid for our Heath clocks (I hate to even think about it), and we still had to BUILD it, compared to the ones we can buy today. Remember, the quality went in because you made it yourself. By the way, I retuned my Heath clock's receiver and that made a big improvement in sensitivity. Heath had a procedure for doing this that I was fortunate enough to get from them a long time ago. They should have put this in the manual, however.

Hello to the group:
I have been working on an old Icom IC 22S here. I have been making progress but now need the schematic to complete work on it. I have the manual for it but it is missing the schematic. Does anyone know of a source for this or could copy it for me? and email? or whatever..

Thanks Jack

This is a follow up to my recent posting requesting for help with my linear, Henry 2KL-4, I would first like to thank all of the kind people who have thrown suggestions at me, I have followed most of them through.
Well here are my findings as of tonight (Tuesday)
I located a dry joint and re-soldered it now I get the following

80Mtrs 400W 50grid .380 Plate Stable
40Mtrs 800W 160 Grid .560 Plate Stable
20Mtrs 400W and drops to 150W UNSTABLE
15Mtrs 600W 110 Grid .520 Plate Stable
10Mtrs 600W 170 Grid .66 Plate Stable

Now these are the results, the High voltage remains constant. All above tests in to a Bird Dummy load and power read a Bird wattmeter. The SWR between the TX and the Linear increases on 20Mtrs as the power drops. The exciter output is 100W constant key down.

So Low output and unstable on 20Mtrs Any thoughts???
I do notice the right hand tube glowing a slightly brighter orange than the left one.

I have schematics should anyone need them, I have them zipped

I thank you very much for your constructive suggestions

Best 73's
Martyn

Larson makes pretty good stuff. If you get the NMO mount, you can run
just about anything they make I think. Even 10m. "I have a 30 mhz NMO
base coil" They aren't cheap, but overall they think they make the
best VHF/UHF mobile antennas. They also use a special "kulrod" plating
which I actually think does help a bit on losses over some other
whips. I'm not sure about the center loading as they don't need
loading, but I assume they are talking about the phasing coil in the
middle.?? This is for 440 I bet as it likely acts as a collinear on
that band. MK

1305. FS/ IC-38A 220 MHz FM Transceiver - or trade

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-26 05:58:00 UTC

IC-38A 220 MHz FM Transceiver

I bought this radio at AES, Cleveland, as a trade-in about five years ago. I never used it for mobile and by don't think it was used as a mobile at all. I never had a base antenna so I used a mobile antenna on a piece of steel. I am offering the radio.

The IC-38A has virtually all the accessories supplied, including the box and the manual. My house is a nonsmoking area!

This item is sold AS IS. Ground shipping will be $9.95 and will be paid by buyer.

$275.00 (ASK if you are interested!) Negotiable
If you are interested I have the 220 mmo magnetic antenna.

> information!

OK, I've used both types of Larsen NMO antennas. and, as others have stated, Larsen makes a top-quality antenna. The "center loaded" refers to a loading coil about 2" long about half way up the radiator. This has the effect of 1) physically reducing the overall length of the radiator, and 2) making the antenna resonant on the 70cm band.. At 2 meter frequencies, the coil looks like part of the radiator, making it effectively 5/8 wave. At 70 cm, the coil becomes a "stopsign" to RF, making the upper section electrically invisible. This is a very simplified explanation, and I'm sure others out there could explain this with greater technical accuracy, but it's close enough for government work.

There are other NMO mount antennas out there that work as well as a Larsen, but when you buy a Larsen antenna, you are buying quality and years of

experience in antenna design.

1307. FS: Yaesu FT-847 HF/VHF/UHF Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-26 06:06:39 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <PrO77.408823$p33.8354409@news1.sttls1.wa.home.com>
Source record: 56559

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

Specifications link:
http://www.yaesu.com/amateur/ft847tx.html

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

Rubber duck antennas,
technically described as "dielectrically coated normal mode helix"
antennas are of very small bandwidth.
Most comercially available rubber helixes resonate outside the band
for which they are beeing sold to innocent customers.

I checked quite a lot of them.

Hello,

I recently bought a Yaesu FT-50 transceiver. The Guy who sold it could not find the antenna that goes with the unit, I'm now looking for a replacement.
So I'm looking for a good performing dual-band antenna for this HT. I want an antenna with the best performance while keeping the size reasonable (length < 15 inches ?).

What should I buy ?
Where should I place my (international) order ?

Thanks Markus

Get yourself a 3/4-inch hole saw and mount it permanently. I started with Larsen mag-mounts and they were OK antennas, but there's just no comparison to having that direct groundplane connection! Ever since I made this discovery, I've been drilling (while tears rolled down my face) holes in my cars now for about 10 years. Four cars in all. No more worrying about slamming doors on cables, no cables hanging inside the car (I do a real professional job, routing cables under carpets, moulding, etc.), and no worries about water entering the car. And, to my surprise, I have traded each car in and NO ONE has ever even COMMENTED on the antenna mount, nor has it affected my trade-in value AT ALL! (I leave the NMO base on the car -- it's better than leaving a hole, and I guess everyone just assumes it's a cell phone antenna base! Besides, a new base and cable only costs about 20 bucks.)

I just recently took off the 5/8-wave Larsen NMO whip from my trunk-mounted base, because I got a new job and park in a parking deck, and I was tired of hearing it go BANG BANG BANG as I drove through the deck! I screwed on a Comet 1/4-wave NMO antenna in its place and now the antenna doesn't even clear the roof of my car. It doesn't perform as well either, but I guarantee it performs better with a direct contact to its ground plane than if it were a mag mount!

My two cents ... but try it, take the time and do it right, and you'll never look back to sliding magnets and those exasperating cables.

Sound like your Heath needs a tuneup. Mine is great i am very happy with it. The tolerances of the components get worst with age. It just a pity somebody does not make a modern version. You might try adding a cheap 1 transistor preamp etc. Its amazing nobody has built this feature into a HF rig, but then again we have GPS units that can do the same function. Nobody has marketed a stripped out GPS unit just with time receive. That would be simpler to those that hate shortwave.

Was wondering if others had the problem with the HTX-242 2m mobile. The back-lighting for the display went out. Is this some type of light bulb that illuminates the display or what? The volume and squelch knobs are still illuminated though.... I thought possibly someone here has had experience with opening these radios up. Any modifications for this radio are welcome if you are aware of any too. The radio otherwise works fine and the display works fine, it is just that it is not backlit.

Since this is on the ham newsgroups, I guess I will ask this here. Would it be illegal to use a speech inverter on the ham bands? Does it fall under encrypted transmissions or those that are not allowed under FCC rules? Just a thought.....

thanks!

Good work Martyn. Although the power seems a bit low, but then I don't know if its tuned up all the way or if the drive is enough. Thats another subject.

As for 20meters. You have something wrong in the 20 meter input circuit. Check for cold solder connection. Burnt coil and/or capacitor (mica's). Perhaps a bad cap that is burnt inside. Replace them all just out of General Principle. RF Parts in California is a good source.

Ryan,

I've had similar problems with Kenwood 2m FM mobiles. It seems most of the modern rigs use a little incandescent light bulb behind the LCD for illumination. Similar bulbs have been used for years in HF rigs as well, for meter and VFO dial lighting. I've managed to snag usable replacements from junked mobile CB radios. There are a zillion different shapes and sizes, and I always manage to find one that will fit and work. Try this if you can't get the part from Radio Shack (you HAVE tried them, haven't you?).

73,
Dean, K5DH

TCARC Hamfest 2001 Scheduled for Saturday, August 4, 2001

ITHACA, NY The Tompkins County Amateur Radio Club announces the Finger

Lakes HAM-IN (hamfest and fly-in) at Tompkins County Airport (KITH), 3
miles NE of Ithaca on Route 13, on Saturday August 4, 2001.

Ham radio seminars TBA.

Vendor setup starts at 6 AM (inquire for Friday night setup time).
Doors open to the public at 7 AM Saturday morning.
Hamfest closes at 2 PM Saturday afternoon.
Large hangar for indoor vendors and displays.
Drive-in setup.
Paved outdoor flea market and parking.
Aviation displays - fly in and show your plane for free!
Breakfast and lunch served by Boy Scouts.
Admission: $5.00 at the door, $4 in advance until 7/15/2001.
Indoor tables: $10.00.
Outdoor space $2.00 each.
Under 18 free.
ARRL sanctioned. VE exams, as always walk-ins welcome at tests.
Talk-in on 146.970- AF2A repeater.

More info, including a PDF format flyer, is available on the club
website at
http://www.compcenter.com/~tcarc/

For more info contact Richard Spingarn 607-387-5251 or <a
href=mailto:richard@eagleprint.com>email richard@eagleprint.com.

I second that. I learned a long time ago, if you're going to
wreck your paint job anyway with a mag mount, you might
as well quit smashing your coax and use a permanent NMO
mount and get the power to the antenna. Remember to run
some sealer or touch-up paint around after you install the mount.
This will keep your roof from rusting away. Also, the large
rectangular mag mount that Larsen makes is probably the
best out there for temporary use of small to medium sized
antennas.

The "NMO" is the Motorola part number prefix where the mount
originated in the 60's. Most antenna manufacturers now make
knock-offs of the original 1/4 wave NMO kit and most all types
of VHF/UHF antennas are also available in NMO for little
difference in price.

The 1/4 wave spike is almost indestructible although you have to
replace it at around $5 when the rubber rots or it will leak water
past the rod into the contact area. Most after market gain
type antennas have better sealing arrangements. The Larsen
gain antennas are excellent in performance and quality. Their
5/8 is legendary, and they make a black tef coated series
that looks great. They never break, they just get stolen.

news:961fa007.0107260449.5617a864@posting.google.com...
: Get yourself a 3/4-inch hole saw and mount it permanently. I
started
: with Larsen mag-mounts and they were OK antennas, but there's just
no
: comparison to having that direct groundplane connection! Ever since
I
: made this discovery, I've been drilling (while tears rolled down my
: face) holes in my cars now for about 10 years. Four cars in all. No
: more worrying about slamming doors on cables, no cables hanging
inside
: the car (I do a real professional job, routing cables under
carpets,
: moulding, etc.), and no worries about water entering the car. And,
to
: my surprise, I have traded each car in and NO ONE has ever even
: COMMENTED on the antenna mount, nor has it affected my trade-in

value
: AT ALL! (I leave the NMO base on the car -- it's better than
leaving a
: hole, and I guess everyone just assumes it's a cell phone antenna
: base! Besides, a new base and cable only costs about 20 bucks.)
:
: I just recently took off the 5/8-wave Larsen NMO whip from my
: trunk-mounted base, because I got a new job and park in a parking
: deck, and I was tired of hearing it go BANG BANG BANG as I drove
: through the deck! I screwed on a Comet 1/4-wave NMO antenna in its
: place and now the antenna doesn't even clear the roof of my car. It
: doesn't perform as well either, but I guarantee it performs better
: with a direct contact to its ground plane than if it were a mag
mount!
:
: My two cents ... but try it, take the time and do it right, and
you'll
: never look back to sliding magnets and those exasperating cables.

I assume you're referring to Pierpont & Brummer's "An Investigation Of 2-Meter HT Antenna Performance" (p. 198), a very interesting and well-done comparative test. If so, you've reached a different conclusion than they did. They show a half wave HT antenna to be about 4 dB better than a quarter wave. (See Figs. 12 and 13, and Table 1, ant. 5 vs. ant. 6.) This agrees with my experience when using an HT in remote locations. The half wave antennas I've seen (AEA Hot Rod and knockoffs) do put a lot of strain on the HT connector, although MFJ has one that's somewhat springy, and there are quarter wave whips that are a lot lighter. So there are times when the lowered performance from a quarter wave is worth the tradeoffs. But the half wave antennas are definitely better from a performance standpoint.

FT: Computer gear for HF Rig / equipment

I have the following computer gear available for trade or sale on a
"newer" HF rig and equipment.
Specifically interested in the below units but open for other
suggestions

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse +
Keyboard,
Windows 2000 Professional. Tower case.
More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra
Wide SCSI Card,
AGP Video, Mouse + Keyboard, Windows 2000 Professional.
More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse +
Keyboard,
Windows 2000 Professional.
More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional.
More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color
frame buffer,
On-board fast SCSI controller, On-board 10-100 base T Ethernet,
On-board sound,
additional fast SCSI controller, additional 10-100 base T Ethernet
controller, Mouse + Keyboard.
Excellent webserver, file server and strong Unix operating system.
Machine is running Sun

Solaris (preferred) or any flavor of Linux ported for the Sparc
platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color
frame buffer,
On-board fast SCSI controller, On-board 10-100 base T Ethernet,
On-board Sound,
additional fast SCSI controller, additional 10-100 base T Ethernet
controller, Mouse + Keyboard.
Excellent webserver, file server and strong Unix operating system.
Machine is running Sun
Solaris (preferred) or any flavor of Linux ported for the Sparc
platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent
condition and recently removed
from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack,
Monitor out jack, Video in jack,
Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x
600), International power supply,
LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5
x 9.25 x 5 inches),
Custom padded case. This unit is in excellent condition and includes
all the original equipment
(cables + books).

If you see something you like, please let me know. I am open to trades
or sales on any of the
machines. Willing to trade multiple machines for the right gear.
Response via Email is preferred.

Sales always welcome ...

Thank you!

And maybe Nope!

It depends what mode of transmission.

On SSB, if you used a speech inverter, you would simply transmit on the
'wrong' sideband (not illegal in the UK), and could easily be resolved.
You would also appear to be about 3kHz off frequency.

On FM, you would, of course, sound inverted.

On AM, you would also sound inverted, but could be resolved by taking
the signal as SSB, and tuning to one of the sidebands.

Ian.

1343. FS/FA: AUL Signal Generator, 50 kHz to 90MHz, AM/FM/CW

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-26 21:04:03 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0107261304.39196b75@posting.google.com>
Source record: 56593

FA: AUL Signal Generator, 0.05 to 90MHz, AM/FM/CW

See photos and bid at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1620922189

You will be bidding on an AUL Instruments, Inc. SG-1144/U Signal Generator. Auction ends on Tuesday, Jul-31-01 13:34:09 PDT.

This is a good signal generator, completely functional and ready to go to work for you. It's a nice unit, covering from less than 50 KHz to 90 MHz or more, providing CW (sine) output and AM or FM modulated output, with output-level ranges from 0.3 microvolt to 1 volt RMS, with digital frequency display and two analog meters, for Modulation and RF Output.

It is in great condition, and has been tested, and works fine. It came with military surplus documents that show a condition-code of B, which means: serviceable and issuable without qualification. It ALSO included an inspection report that says NO FAULTS FOUND.

Everything is intact, and in very good used operating condition. There is no physical damage that I can see, except for minor signs of normal wear and tear.
I tried almost all of the settings of all of the controls, and everything I tried worked as expected. I did not notice any noisiness in any of the controls. I did not rigorously check the calibration (but it looked very, very close), did not test with external modulation, did not check the rear auxiliary output, and did not try running it on 230 volts. I also did not test the 100-Watt reverse power protection feature of the output.

The winning bidder will have a 10-DAY MONEY-BACK RIGHT-OF-RETURN if DOA.

The reserve price is only $99.00! (Or, "Buy It Now", for only $149 plus shipping.)

NOTE!!

(I have four more of these that are almost identical, for sale for
only $149 each plus shipping costs. Email me for photos, questions, or
a shipping quote, at tomg@fullnet.com. And, check my website for
many, many other great used test equipment bargains, at:
http://www.fullnet.com/u/tomg/gooteesu.htm)

Functional Description, AUL SG-1144/U Signal Generator:

50 kHz to 90 MHz Coverage, in Five Frequency Ranges
Digital Frequency Display, 4 digits, with "Display Test" button
Coarse and Fine Tuning Controls
Analog RF Output Meter: RMS Volts and dBm
Output Levels from 0.3 microVolt to 1 Volt, -120 to +10 dBm, in
Fourteen Ranges (maximum output: about 3.4 volts p-p)
Variable Output Level Control
Analog Modulation Meter: AM Percent and FM Khz Peak
AM Modulation: 400 Hz, 1 kHz, and External
FM Modulation: 150 Hz, 400 Hz, 1 Khz, and External
FM Meter Range Switch: 10 KHz or 75 KHz full scale
Variable Modulation Level Control
Overmodulation Indicated by Flashing Frequency Display
External Modulation Input, BNC, 600 Ohms
RF Output, BNC, 50 Ohms
Output has Reverse Power Protection, 100 Watt Max.
Auxiliary Output, BNC, on Rear Panel
Permanently-Attached Power Cord, Three-Prong, with Cord-Wrap Storage
Operates on 115V/230V, Selectable On Rear Panel
1 Amp Slo-Blo Fuse, Accessible on Rear Panel

See photos and bid at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1620922189

Thanks, everybody.

Best regards,

Tom

>haven't you?).

If it's a colored light, the bulb will likely have some sort of rubber
cover on it that you may want to peel off to put on the new bulb.
Other than that, open it up and look at the bulb, then check a few Rat
Shacks until you find a small 12V bulb the same size and shape. IIRC,
they'll be about $1.50 per package, but I can't remember if it's
singles or 2-packs. Solder it in, trim the excess leads, slip the
bulb condom back on if needed, and you're all set.

1345. Icom 02AT problem

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-26 21:40:39 UTC
From: bernardr@daldesign.com
Message-ID: <e0066c1e.0107261340.5cef09af@posting.google.com>
Source record: 56596

I just repaired an IC02AT, that had two traces that corroded away on
the front-panel board. This I have fixed by soldering a very thin
copper wire across the gaps. The buttons now work.
But now the display is missing one digit (10's of MHz)
I am stumped.
Can anyone suggest anything?
Thanks

ps it has been modded- not by me

No brand that I can see. They're made in China. Sam's Club just buys a bunch and sells them. I think you need to be a member to purchase things at Sam's. Perhaps you know someone who is.

As for the analog clock movements, I've seen them at www.klockit.com You can find other atomic clock stuff at www.atomictime.com

I'm already buying one of these $23 units for another person and mailing it to her. Shall I buy two? My luck - they'll be out of them when I go there Saturday...

You should have seen how poorly it worked BEFORE I got the tune-up procedure
and tweaked things.

Actually, in all fairness, my one remaining problem is that the outdoor
dipole antenna is going between my house and garage roof peaks, and the
direction just happens to be in line with east/west, so Colorado is really
off the end of the antenna. This is about 90 degrees off of where it should
be aimed. One of these days I need to get very friendly with my neighbors
and run the antenna between our houses. This will make the antenna point a
lot closer to north/south, which will let the dipole actually "point" to
Colorado.

Yes, GPS and WWVB work much better, but I love the red glow from the LEDs on
top of the television set !

LCD has a contact strip that is very sensitive to placement.
It may have "walked" when the cover was off. You may
have to do a little trial and error with the unit powered up
and open to insure proper alignment.

From memory....
(Caution I'm over 50!)
You need to take the top and bottom covers off.
then drop the front panel,
it exposes the battery on the display board.
Soldering is required to replace it.

1356. Re: WWVB Clocks work in basements

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-27 00:53:10 UTC
From: pkirley.nospam@mail.neonramp.com
Message-ID: <tm1ermp0daik95@corp.supernews.com>
Source record: 56509

I bought two WWVB clocks at the Sioux City ARRL Convention last month. Both were made in China and run on AA batteries. The dealer had three types available:
(1) a wall clock with large numerals;
(2) a desk clock about 3" wide by 6" high; and
(3) a "travel" clock about 3" wide by 1" high.

I bought clocks (2) and (3) for about $30 each. Neither of them have provision for external antennas. I particularly wanted (3) because it CAN be set to GMT; I use it in my near-basement shack in Omaha (which I must admit is only 500 miles from WWVB). Both clocks seem to be working very well so far.

The dealer (with whom I have NO connection):

Good working DJ580 with single battery. Has standard drop-in charger (not a rapid charger). Has some wear on the keys. Battery could stand to be rebuilt.
Covers Air band, 140-170, 400-470, and 800-999 Mhz no gaps. $145 and I'll cover shipping via priority mail within the US. Includes a very good copy of
the manual. Service manual is available for free from Alinco online.

Roy,

I was unable to find the paper you were referring to, it seems to be
very interesting and pertinent to my quest. Reading through the ARRL
Antenna Handbook I could not find such information. Do you knoq where I
could obtain a copy ?

It seems that a good case can be made for a 35cm whip (1/2 wave on
70cm). This gives a 1/3 wave on 2m, which is an odd fraction...

This was in the _ARRL Antenna Compendium_, Vol. 4. It's available from
the ARRL and various book dealers.

A 1/2 wave on 70 cm is about 1/6, not 1/3, wave on 2 m (35 cm/2 m ~
1/6). If you could handle the matching difficulties, you'd have a so-so
antenna on 2 m.

Hello!

Here you have a compendium of four articles I have written about a
Kenwood TS-930S repair. Hope you enjoy them the same I enjoyed
working on that rig :-)!

As usual, comments welcomed!

Regards,

JOSE

Subject: [Kenwood] Another TS-930S repair (I)

Hello!

Some of you probably remember about my TS-930S restoration notes (back
in
October 2000). If you are interested, they are on-line at:

http://www.geocities.com/eb5agv/ts930s.htm

Well, I managed to get another 930S in unworking condition (yes, it
seems
addictive!). It arrived here today, in good shape except for an slightly
bent bottom cover at the front feet supports (due to the large weight of
the unit and the transport from England to Spain, although packaging
work
was fine). I have just spent a couple hours with it and I have got
interesting results so far...

First, the rig is a plain 930S: no tuner nor extra filters. It is an
'early' version (this means it has a S/N lower than 0310xxxx). It is
very
close (S/N 0308xxxx) and has some improvements made in 0370xxxx series,
but
it is mainly 'early'. As depicted by the seller, all you got when
connecting it was a constant whistle from the speaker, nothing at the
display and a lighted S-meter. Disconnecting J1 from the DIGITAL BOARD,
I
checked the input voltages to that board and were just right as it was
the
main 28VDC voltage. I noticed that the power wires going to the POWER
AMPLIFIER were disconnected but, as this does not interfere with RX
operating, I left them that way.

Typical faults with these rigs are bad vias at the DIGITAL BOARD so I took
my spare one (dated 1991; I got it with my other 930S and was checked) and
substituted it... and it worked!!!. I got the display working and rig
received at all bands. Every control did what it was expected to do.
Fine!!! (I need to work on the unworking DIGITAL BOARD and try to fix it;
having an spare is really interesting with these rigs)

But then there were the disconnected wires... hmmm... perhaps previous
owner thought the failure was at the POWER AMPLIFIER and just disconnected
them. Well, let's try it... they were a dead short!. So there was a failure
somewhere in the power amplifier assembly. After removing about 20 screws,
I got to the POWER BOARD (where the final transistors are located) to find
somebody had been 'playing' around: Q2 and D2 were just missing (!). Final
transistors looked original jobs but they had some suspicious marks in the
soldering work :-(... immediately I pictured a bad final transistor pair.
They are MRF422 and, I guess, a matched pair will run for about $70-$100
:-(

But Q3, which works along Q2, was also resoldered, so I suspected about it.
Checking the finals with the DVM I found that the junctions seemed to be
fine :-) :-)... I checked other components which were located between VCC
and GND... and, you guessed it, Q3 was shorted!. Removing it, I got high
impedance reading on the DVM between VCC and GND. So it seems failure is
located at Q2/Q3 stage. BTW, they are MRF485 transistors. I need to locate
a matched pair and, probably, will get the transmitter working (I will
check surrounding components, just in case)

So it seems I can get another 930S back to life with some work and not too
much money ;-). I will keep you informed about my progresses.

Of course, any hint will be more than welcomed.

Regards from a happy camper!

JOSE

Subject: [Kenwood] Another TS-930S repair (II)

Hello!

I did it :-) :-)!!!. I have got the Digital Unit working :-)!!!. In fact, I
have the rig, without the power output module, receiving at 21.200MHz at
this moment, with the 'original' (1983 vintage) Digital Unit.

In order to fix it, first I have redone all the vias in the board, using a
thin tinned wire and some patience. But, as usual, it did not work first
time. So I have thought about checking the microprocessor for operation.
Armed with my Tektronix 475 oscilloscope, I have checked a basic thing, the
CPU oscillator. And it was dead!. So I have checked for VCC. And it was
missing. But the 7805 and 7812 regulators had right outputs... then I have
jumpered the power from another VCC pin at a close IC and... it worked!!!.
So the fault should be just in one point.

So I have got out the Digital Unit board and have followed the traces from
the microcontroller pin 40 (VCC). All was fine, including several vias,
until a cold soldering right at the voltage regulator (BTW, all the unit
really seems a poor soldering job). Once fixed I have put back the board
and the 930S has come back to life :-)!. Every function seems to work as
expected. Hooray!!!

Now I just need to get a couple 2SC1969s transistors and the 'mysterous' D2
diode to start troubleshooting the output stage. BTW, I plan to do a simple
mod at the power supply, to have the fan always connected, as I did in my
other 930S. It is too hot in the usual configuration.

Best regards,

JOSE

Subject: [Kenwood] Another TS-930S repair (III)

Hello!

Well, I have had few time to work on the 930S last days but I have been
able to do a couple things:

First, I fitted an AM filter I won some months ago at eBay and had unused
on its original box... I bought it for an R-5000 I was going to acquire but
seller never answered my last messages (I wonder why!) so the filter sat
unused. Well, it seemed so easy to fit it that it could not be true. And,
yes, once fitted, AM WIDE position just did not work :-(!. Could the AM

filter be bad?. If so, after about five months, I could do nothing... But
checking the rig I found that moving the filter a bit AM came to life!.
Contacts at the connectors were just fine (really clean). I rechecked with
the standard 'no filter' plugin and it worked fine regardless of pressing
and moving it. So the failure was not at the PCB but in the filter. I
resoldered all the filter connections just in case. But nothing happened.
If the failure was inside the filter cage I could do nothing as it was
embedded in a kind of hard plastic material... Then a bulb lighted over my
head... perhaps... if... could it be?... YES!!!. One resistor just under
the filter had slightly longer than needed legs so when the filter was put
in, it shorted one of the filter solder pads. I pushed the resistor on the
PCB and all worked fine :-)!. So there is a lesson here: never trust things
are always built right at the factory just because the rig has been working
for years.

Then, just yesterday, I found a local supplier for the 2SC1969 transistors
(intended to replace the damaged MRF485 drivers). They were about $3.10
each and I bought four. So now i just need the varistor type STV-3H (D2 in
the schematics) to give the power amp a try. I wonder if somebody could
suggest a way to check the PA without D2.

Another thing I checked was this 930S against my 930SAT receiving same
signal from same antenna (typical A-B check). Although the 930SAT showed
lots more S-meter deflection, signals, both faint and strong, sounded just
the same in both rigs. So it seems S-meter is not well calibrated in at
least one of my 930S. I will check this with my HP-8640B signal generator
to calibrate both same way.

And just another thing I have just recalled: my unit is S/N 0308xxxx BUT
the power supply section is just the same as my other unit. And this is
curious, as in the service manual it says changes were made from 0310xxxx.
Is there anybody with a similar vintage unit who could confirm this?. It is
relatively easy: just removing four screws in the power supply fan cage,
from rear panel, you can look inside: if there are just resistors, it is
'old' type. But if there are three zeners, it is 'new' type. Of course,
there are more internal changes, but this is the easiest to look at.

Once there, I changed the wiring of the power supply fan to connect it
permanently to the 9VDC line. That way it runs permanently but at
reduced
speed (and so noise :-)). It keeps the power supply from being too hot
to
touch to be just warm. I know this won't be enough cooling if used in
RTTY
or other TX demanding modes, but by now I use them just in SSB and this
has
worked fine on my other 930S for months. I plan to add a 7812 regulator
and
a tiny switch to be able to select LOW and HIGH fan speeds, if ever
needed.
There is plenty of room in the fan cage.

All in all, I am very glad with my 'new' 930S!

Regards,

JOSE

Subject: [Kenwood] Another TS-930S repair (IV)

Hello!

With some delay (one month and a half!), here you have the last episode
of
my 930S repair saga.

Summing up, I had my 930S fixed on receiving but needed some work on the
transmitter. Somebody had been there before me and there were both
missing
and damaged components: drivers (originally MRF485) were bad (in fact
one
was just missing and the other was shorted). Also, a varistor diode (D2,
STV-3H), associated to one driver, was missing. So first thing I needed
was
to locate appropiate substitutes for them. It seems that the ubiquitous
2SC1969 was a good replacement for the drivers and I was able to locate
them locally. But the STV-3H was not available at usual sites (as RF
Parts,
Farnell, ...). There is one possible substitute (SV03YS) which is
documented for the 940S but it is exactly same circuit than in the 930S
so
it should work. But it was also out of stock in several distributors...
until I located it in UK. So I ordered some of them (just in case). They
arrived last week so I had everything to attempt PA repair :-)

I should say that I had never dealt before with a transistorized PA in
such
condition (missing components and having to substitute them with other
types). But I like challenges... So I replaced them. I was wondering
which

was the cause for the drivers to die. Power supply was good on this rig when I got it. So I looked in detail to the circuit and measured in some points for resistance while checking with the schematics. That way I was fortunate enough to locate a shorted protection diode (D5, a 18V/3W zener).
I don't know if the zener failure damaged the transistors or if it was the
other way but I had located an unsuspected fault!. Of course, I did not have any 18V/3W zener handy, so I put a 20V/2W unit temporarily, as the original part was listed but out of stock at Farnell until next month. Hope
the replacement will work fine (any hint on this will be more than welcomed!)

Once all the components were soldered on the PCB, I put the circuit back to
its heatsink, cleaning old silicone thermal grease and aplying new one. BTW, old one was in really bad shape (too few and too hard). I wonder if this contributed to the demise of the PA...

Then I connected the PA temporarily to the rig, laying on the heatsink. I
applied power to the rig... no smoke ;-). So I put CAR and MIC GAIN to minimum and USB mode in 14.175. Then pressed SEND... still no smoke :-)!.
And the finals got a bit warm. Fine, there was some RF generating there!. A
fast look to the service manual showed I needed to lift L7 and put an amperimeter to adjust driver bias. I did it to find it was far from the standard 70mA (close to 150mA). But with VR2 I got it to the standard 70mA.
Manual says it 'could take 20 seconds to stabilyze'. Well, 20 seconds not... a full minute and counting!. As the manual asks for 70 +/- 10 mA, I
left it at about 65mA, as it seemed to slowly rise. Then I reconnected L7
and put the amperimeter on the 28V PA power supply line, to set the final
bias. It was very close to the 1.3A the manual specified so with an slight
VR1 movement it was right on place. Fine!!!

Now it came the real test: 10A setting (to calibrate the rig amperimeter).
Cranking up CAR control, I got 10A on the Fluke 77-II (yes, I know it is its maximum) but the rig meter showed about 11A. Following the manual instructions I got it right by adjusting VR17 on the signal unit. The rig
was putting a solid 120W measured with my Bird 43 on a dummy load :-)!!!

There is also a 2A calibration I did; well, my 930S said it was about
1.5A
so I changed the VR17 setting a bit to get a little closer without
disturbing too much the 10A setting.

So far, so good. Really good for my first solid state PA refurbishing
:-)!

I put the PA back on its operating position on the rig and checked
again.
It worked fine. Then I thought about checking the fan operation. I put
the
rig on CW and adjusted CAR for 50W output. PA got warm. And warmer. And
still warmer. And the fan was stopped!. I almost got a burnt on my
fingers
and the fan still was stopped. So I put the rig on receiving. Mr.
Trouble
comes back!

Opening the fan cage I quickly realized my fault: fan cable was clipped
by
the fan support against the heatsink... once this was fixed, I tried
again... and when I could not keep the finger on the hottest PA point
(just
over the finals), it started to rotate. Well, at least it works exactly
the
same as in my other 930, although I think it starts a bit late.

This is the current status of my restoration work. I will do some
checkings
with the rig and will also try to do some contacts today. If all is
fine, I
will put the covers and will add it to the operating position, just over
the 930SAT. It will be a nice looking shack corner :-)!

Regards and sorry for this long post!

yes that is the article,,
page 204
Conclusion 9.
"None of the telescoping antennas proved markedly superior in their extended configuration, in fact all gave similar results"

In his recommendations No4.

"an excellent low cost antenna, compact antenna is a simple 1/4 wave whip. Addition of 4 radials will produce performance also as good as the best telescoping whips 1/2 wave and 5/8wave"

I doubt very much if 4db is important on a FM circuit or whether it would be even measurable on most HTs signal meters. Not that i would want to discard 4 db if i can get for free. But walking round with a 4ft whip on a HT is just not practical

I've ordered a Larsen NMO 1/4 wave 2 meter antenna and a Larsen NMO mag mount base which I'm going to use for my mobile rig. I know that magnetic mounts, particularly the coax, are prone to problems since the coax not only gets bent at the point where it feeds into the vehicle, but also gets "sandwiched" between the body of the vehicle and the door.

I was wondering if any has any tips or tricks that might help decrease the chances of damaging the coax when using a mag mount (in case it matters, I drive an Explorer). I know that using a standard roof mount would be best, but I'm going to stick to a mag mount since I can't bring myself to drilling a hole in the roof. Anyway, any suggestions would be greatly appreciated!

I know you said "mag mount" but... I've been really happy with the Diamond K400CNMO, a hatchmount, on my '97 Explorer. It clamps nicely onto the rear door, has good protection of the finish (the exterior in this area is plastic anyway). I have two and think they work great.

The cable routes in easily and does not get crimped by the door frame. They are unobtrusive when the antenna is removed and survive carwashes.

1379. Bids for ham gear on eBay...are people crazy?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-27 15:24:12 UTC
From: kl465@yahoo.com
Message-ID: <81e10905.0107270724.50556a1b@posting.google.com>
Source record: 56534

Like many hams, I enjoy browsing eBay for ham gear and other electronic items. What I've noticed, and I'm sure that many others have noticed this as well, is that many bidders are ripping themselves off by place ridiculously high bids on equipment that is readily available at any amateur radio dealer. I'll often see auctions for mobile rigs close with the winning bid being only 20 or even 10 dollars less than the item could be purchased for, brand new, from a reputable dealer. I know that for the most part, dealers are honest and sell equipment that works fine, but why take the gamble when for only a little more it could be purchased brand new from a dealer (which would also give a fresh warranty).

There have also been times when I have seen gear sell for prices that are equal to or even greater than what they could be bought for brand new from a dealer--in some cases, MUCH more. The other week I saw a Kenwood TM-261A 2 meter mobile transciever sell for $250.09 (don't believe me? go to http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1256353349 . this link should be good until mid-August 2001). This radio is readily available can be bought from any reputable amateur radio dealer for around $170.

My question is this--why do people pay these kinds prices for the gear on eBay? For me, it's a mystery as to why someone would bid for an item on eBay when they could purchase it brand new for only 15 or 20 dollars more, let alone those who pay much more than the current going price. Don't these ignorant individuals research prices before placing a bid?

Please don't see this as a bashing of eBay and those who use it--I really like eBay and have bought many items through eBay, but mostly only stuff that isn't available new anymore. It seems that these days, you can't get a good deal on equipment that can be purchased new elsewhere, since there seem to be so many individuals who bid at (or above) the current retail price.

This isn't by any means an important topic of discussion, but I find it interesting and just wondered if anyone else had any thoughts on this issue.

Some have also suggested that the rising prices one sees at local
Hamfests/rallies is due to people discovering they can get more money by
selling the item on E-bay. So they jack up the price at the local Hamfest.
You tell the guy he's asking too much and he will tell you he can get more
for it on E-bay, so no deal!

Keep the Mag mount in your emergency "ready kit" and drill the
hole and use a permanent mount. Mag mounts are great for
temporary mounts, but it just doesn't make sense in the long run.
The first time they get knocked off and bust a window or ding
your hood, you will wish you had overcome your anxiety and
punched the hole. Mag mounts will also collect dirt around them
and have to be removed for washing. When left in place for a
while they will creep and scratch your paint. I've seen guys
actually put duct tape on their roof to try to stop it. Believe me,
I understand your anxiety. I had a customer demand that I drill
a hole in the back of his truck cab to feed the coax in from his
MAG MOUNT!!! Just silly.

It does take some planning and investigation to find the right
way to feed the coax so it won't get snagged , and to make
sure the hole won't interfere with roof contours or lighting.
And you have to be careful how you handle the headliner.
But the initial pain is worth it to be able to permanently
mount your radio gear and have it when you want it and
to be able to drive around looking like a supervisor instead
of some delivery gofer with a hokey contraption on the roof.

IN My experience on Ebay, A measurable number (20-30%) of those "too good to be true" prices end up actually being "DeadBeat" bidders. You end up getting no payment, no responce from the bidder, or multiple e-mail excuses for 3 weeks untill you give up on the buyer.
I have also, however, seen people buy a used HT for $20 less than a Brand new sealed one, just because the guy "threw in a used speakermike or a used case!
People get caught up in the bidding wars. Anyone who ever went to a Casino & Hit, say, $100 on a slot machine & said to himself, "I'LL play another $20 & walk away with $80"....& then at 80 coins re-thought & said, "OK...I'll get up at $70"....ect.....Knows what these bidders are doing when they get their Ebay e-mail that says "You have been outbid..."

It's Barnum's Law (a sucker is born every minute). The only downside it that the ill-informed tend to raise the bar, so to speak, so that the rest of us must pay more elsewhere. I don't have a problem with eBay - I don't use it and doubt I ever will. I don't know whay anyone would (oh, yeah - Barnum's Law).

It's too bad there is not a good registry of "reasonable appraised prices" hooked into Ebay - something like the Edmunds data for used cars. Hey, opportunity is knocking, I think.

In my own case, I looked at ebay just after I bought a brand new FT-50. Sure enough, there were FT-50's there that were going for 25-50 dollars more than I paid.

If people want to pay more than retail, its their right, I guess.

You might want to track down one of those little screw on caps for
when you're going through a carwash. If you can't find them, a soda
bottle cap should work for the PL259 mounts, ar an NMO-PL259 adapter
should be water resistant enough to keep the wash water out of an NMO.

> Amateur Radio Is Fun!!! Ask me!

Most of those type have the bulbs mounted in the front faceplate. They
are usually bulbs with a colored plastic cover that goes over them. The
bulbs are usually mounted direct on the circuit boards with very short
leads. Pretty easy in most cases. If the bulbs are colored, I'd have
radio shack order you some replacements that have the same shell on
them. Also as one said, if it's still under warranty I guess you could
let them do it, but the radio would be tied up a while. If you have a
dimmer , running the lights at a lower level will make them last a lot
longer. This was a problem on many of the yeasu's "omniglow" lighting. I
have a 2500m that had all 4 bulbs burned out. Probably because it was
run on full bright all the time. MK

1389. BEWARE - Defective IC756PRO units

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-27 18:57:42 UTC
From: Bob Raymond <braymond@iea.com>
Message-ID: <GQi87.12173$Up.358057@sea-read.news.verio.net>
Source record: 56543

Anyone contemplating the purchase of a new IC756PRO should be made aware of a problem with the ATU, antenna tuning unit.
At least some of these rigs experience a problem that ICOM calls "hunting on SSB".

The antenna tuner works fine on all modes except SSB, where after tuning for a flat SWR, the SWR immediately starts climbing when transmitting on SSB. This is apparently due to the unit's inability to properly detect the SWR in the SSB mode, resulting in the tuner constantly trying to correct the SWR.

ICOM denies this being an across the board problem, but I would check this out as soon as your *brand new* unit arrives!
After complaining LOUDLY to my dealer, they agreed to foot the shipping charges back to ICOM for warranty service.

Bear in mind that the price varies depending on where you buy it. Recently I've started buying some new kit from the US cheaper than I can get second hand here in the UK. Many manufacturers seem to do US$ to GBP conversion at 1 to 1 when setting their retail prices for the UK. Great consumer campaign running for some time now against what we see as "Rip off Britain". We hope for some success soon, but even after an average drop of 10% in new car prices, British buyer still pays around 30% more that even mainland Europe.

I know you've already spent money on the mag mount, but I don't think you are going to like it as a everyday thing. I don't like drilling my vehicles either and have been successful with glass mount antennas. Have even moved them from one car to another with a remount kit. You might try one.

Explorers are known for their inability to keep the shiny side up and the
rubber side down.

> The NMO seems sealed - only the contact points are exposed, unlike the

A couple of the NMOs I've seen out there weren't well sealed around the
center conductor. Hard to say if they came that way, or if it happened
during use. The heat in TX screws up a lot of things.

I sure don't understand it. My guess is that a lot of people have no idea what the item should be worth. This extends beyond amateur radio (I remember an old Hallicrafters S-20R - asking minimum bid was $200!! I had one as a kid and wouldn't pay 200 cents, let alone 200 dollars). I've seen a Hammond B-3 (worth perhaps $3500, maybe $4500 with Leslie in excellent condition) going for $12,000. Parts for them are becomming scarce since they stopped production around 1970. At that point, I'd be looking for the new Hammonds with midi and alleged perfect reproduction of the 'old' sound for maybe $18,000. It wouldn't surprise me to see one of the old tube Hammonds (30 to 40 years old) going for more than the new ones. So it appears that more than just amateur radio is being affected. Oh ... just a year ago, the 133 MHz upgrades to the OLD Pentium 66 were going for over $100! If you want to bid, bid - but only bid what you want to pay. Let someone else pay twice (or three times) what it is worth!

I think you are seeing bidders who don't do their homework. Perhaps they got a good deal on some non-HAM item previously and assume the bid is a good value on this item.

I have seen folks who have the perception that some places such as SAM's or Wal-Mart are cheaper which is often the case but in some instances they aren't.

On a similar topic, accessories on items - not just HAM items will often have a high markup because the retailer knows the customer is likely to "bundle" his purchase with the needed accessories without pricing them. I discovered this while researching a purchase for a miniDV camera recently.

Purchasing the accessories from another vendor, often one who didn't stock the camera I wanted yielded a better deal.

Thank goodness the internet allows us to look around without wasting gasoline - just electrons.

Hi,

I have a theory that a certain portion of the bidders grab a case of beer and don't start bidding untill they have polished off at least half of it. The next morning they wake up and find out what they have won :)

If you had the time it would be interesting to see if there is a seasonal variance in prices. Stuff in a number of categories has gone up quite a bit reciently. Who knows why ....

In some cases I'm fairly sure that people simply find the auction sites easier to use than going to a dealer site. The same thing applies to real auctions. I can remember a *lot* of times people would buy stuff at auction that they could have gotten for 10 or 20% less brand new on the other side of town. It can be an addiction just like gambling. Some people are more caught up in it than others.

It can be fun to watch though ...

Does your Explorer have a roof rack? If so, it's easy to make an "antenna mounting bar" to fit across the rails on the rack. Then simply route the coax into the truck via the rear hatch door opening. Bring it in at the top space between the hatch and the car body, then run it behind the big rubber weather strip.At this point you can either do it the right way and run it behind the inner roof panel or side panels, or (not very professional, but) you can just lay it loosely on the carpet and bring it to the rig(s).

I have made a few of these rack mounts for Explorers and Blazers, they are really strong, and work much better electrically than a mag mount - and they don't scratch up the paint. I can email you a pic of the rack mount I designed for my Blazer if you are interested.

Your post has certainly met with a more salutary reception than one I made several months ago. At that time, however, my message suggested that, from the seller's perspective, eBay is a great place to go if one is primarily motivated by greed. (Note that I am saying that if I'm greedy, I should definitely sell an item on eBay, *not* that all eBay sellers are greedy.) I was roundly lambasted by nearly every reply I received. Here, you are approaching the situation from the buyer's viewpoint, which, as you have correctly pointed out, can be a dizzying environment of wildly escalated prices. What could it be? A bit of that "irrational exuberance" Alan Greenspan warned us about?

Humm, my PRO does not have this problem, and has never been back to ICOM, or a dealer for update.
This problem is NOT common to ALL PROs, I know several guys with these units, and none of them have had this problem.
That is not to say that the problem doesn't exist. But, it is NOT common to ALL units.

Back in the mid-sixties, CQ magazine ran a couple of articles on "speech inverters". That was a time when you'd often see DSB transmitters or converters (DSB of course being specifically double sideband with a suppressed carrier). Since virtually no one was using a synchronous detector, the common means of receiving DSB was to use an SSB receiver and use it's filter to hack off the unwanted sideband. But older receivers were still common, and their IF filters left a lot to be desired when receiving SSB.

So CQ ran an article (and then a followup showing a way of doing the same thing with a different circuit) that was nothing more than a balanced modulator and an audio oscillator. It inverted the audio, and then you fed that into the DSB transmitter. The result put the lowest audio frequencies at the far points from the suppressed carrier, rather than right at that point. So you didn't need such a sharp IF filter to get rid of the unneeeded sideband.

Normal DSBsc

highest LSB USB highest
audio----------|-----------audio
|
Suppressed
carrier

inverted audio DSBsc:

lowest LSB USB lowest
audio----------|-----------audio
|
suppressed
carrier

In the first case, the resinserted carrier has to be exactly where the suppressed carrier is or else the two sidebands will translate to audio at different frequencies. Filtering out the unneeded sideband in the receiver allows for some variation of the beat frequency (the same way one can mistune an SSB signal with the only result being an odd sounding voice).

But if your filter isn't really great, as was the case in those old receivers, you couldn't knock out the unneeded sideband right at the carrier point.

With the inverted audio, you'd place the bfo at the "lowest audio" point, and the flaky filter would just let some other signal through (which could be annoying, but could be mentally tuned out unlike the sidebands beating together). Any of the unwanted sideband that did pass through the filter would translate to audio at a higher frequency, where it would be well away from the frequencies of the wanted sideband.

An interesting concept, and one that never got much coverage because the assumption was that you'd use a good SSB receiver to knock out the unwanted sideband.

Hi Steve,

We're doing some development on this unit to allow for PSK-31 and RTTY split screen and SSTV. Seems like a good unit for those modes and DSP.

The SSTV modes are very crisp, and the PSK-31 and RTTY will receive without the use of an external computer.

Runs on AA batteries for portable operation.

Actually some people have more money than sense,$300
won the bid on a swan250c.I've got two with accessories I'd sell for that
price,then buy a brand new 6mtr all mode for a little more :-)

Subj: Radio Microphones for Harmonica, 7-27-2001

I'm a blues harmonica player interested in some of the old mics you radio and ham guys might have laying around the shops or in boneyard collections, working or nonworking. Especially the Astatic JP-30, 31 (Classic Retro Bullet "Spokesman"), Astatic D-104, Astatic 30, (biscuits), Astatic DN 50, Astatic 600 (too cool!), Turner 22X, 22D (Buck Rogers), Shure 520 (Green Bullet), Shure 7A, American (Saltshakers), Webster-Chicago (Wire recorder mics), etc.
The base would not be used so the head is the important part, the more retro the better. The 1 piece with stand models and "CB" styles are not desireable for harp mics. Please have a look around and let me know what you find.

Im new to ham and I have no idea what kind of setup to get. Im going to have My technician with code license and would like to work the local repeaters etc. Im looking for a used rig and not wanting to spend more than 700 dollars total.

Also what kind of atenna setup is needed if I have lots of local repeaters, but also want to communicate long distances. I don't want something too intrusive to my backyard environment. Thank You for your help.

Stuart

Congratulations Stuart...

By passing the code, you have defeated the barrier that keeps many from the joys of HF.

I assume you hope to be upgrading to General and perhaps even Extra in the not too distant future, so would want something with HF capability as well. In your used price range, near the top of it, you might consider one of the all band compacts, such as the Icom 706 Mk 2 G or maybe the Yaesu FT-100. Both will do 160-6 meters on HF, and also 2 meters and 440 as well.

Otherwise, you might consider two separate rigs, one for HF and a dual band mobile for 2 meters and 440. I think you could probably find something decent for HF for under $500 and a vhf/uhf mobile for around $200.00. I would stick with something with solid state finals, no tubes.

ON the other hand, if the $700 budget is for vhf/uhf only, you can buy almost anything you like. I would check out the Kenwood line, particularly the TM-V7A

If you are close to repeaters and on an upper floor, you may be able to get by with a mobile type antenna on a mag mount, and place it on a metal surface, such as an air conditioner case.

For an HF antenna, check out the G5RV for multiband use.

73 adn welcome to ham radio

Hello Stuart... and congratulations! For a great VHF-UHF radio, consider the new TEN TEC 526 Multi-Mode 6M / 2M digital. You can get one brand new from the factory for less than $700 and they have a special offer right now. Go to their web site... http//tentec.com and click on "Amateur / Short Wave" and you'll see it at the top of their page! Great new rig!!! It's all digital and capable of 2M SSB, FM, etc.
Also for some photos and insight into the Ten Tec factory, go to www.eHam.net and click on "Ten Tec Tour" with an added pursuasion to "Buy American." Wish you many happy returns! Respectfully, Johnny W4XKE

1436. Icom IC-22U Accessory Jack

I've acquired an IC-22U. It has a jack on the back marked "ACC". A quick check of the net hasn't turned up any information about it, except I found a photo of the inside of a repeater that uses the 22U and has a cable connected to it.

Anybody know what functions are on the jack? Is it useful for packet?

Thanks.

Gerry kg4nbb

PS: followups that include my email would be appreciated -- I don't get here as often as I used to. TNX.

Hi,

The most interesting point is that it takes two to three crazy people to make a high bid. Generally the seller goes a bit nuts with hype and then two or more bidders go at it.

The most amazing single thing I have seen was on a Dutch auction for some Tek test pods. Everything was going on nice and orderly with about eight bidders on the twenty pods. The price had gone up from about $20 to about $90 and the bidders each had a couple of pods. At the last minute of the auction in comes a guy with a bid for the entire block of 20 at $800 each. If he had gone for 19 out of the 20 he would have had them for 10% of what he paid. Not a very well thought out approach since he had a feedback rating up in the 100's.

Sometimes I wonder if the really weird prices you see are a result of two people trying a monster bid at the last minute snipe attack. As long as they are competing against normal rational people it works pretty well. If the Tek pod auction had been a normal auction the guy would have had the bunch of them for $90. I suspect that relatively few people are nuts enough to try the monster bid so they don't run into each other very often. Of course you don't see $1250 for a Teletype model 33 very often either ...

Sure beats watching TV ....

For US$700 you should be able to buy TWO vhf/uhf mobiles -- brand-new.

An Icom 706/2g HF/VHF/UHF mobile goes for about $950. If you were considering $700, I might try & wait for the additional $250 and get a radio where you can do all HF modes & bands as well. Of course, if you don't want to upgrade right now, then stick with a v/uhf mobile. It will serve you well for 10+ years. (It should be noted that the Icom 706 can do all modes on the vhf & uhf bands, rather than the "FM only" v/uhf mobiles today)

If there are a lot of repeaters there, a magnet mount antenna on top of a file cabinet or the refrigerator will do the trick for FM work - not much of an antenna is necessary. Of course you can buy outdoor pole-mounted v/uhf antennas too, which would probably work better but not noticeably so. HF is a different story.

Actually, slight technicality aside, the poster is correct in that amateur radio equipment need not be type accepted.

Commercially made amateur radio equipment must be type accepted.

However, as an licensed amateur, we are free to build and operate our own, non-type accepted equipment. The only requirement, is that the equipment we purchase and/or build, is operated within the confines of the rules and technical requirements.

The exception to building equipment is if we, as an amateur radio operator, start to mass produce and sell radios for the use in the hobby, we then become a manufacturer, and therefore must have type acceptance for that "product".

Now, to be honest, I do not know at what point/quantity is considered to be "manufacturing", but I suspect that if somebody built more than a handful of radios, specifically to market and sell, the FCC would probably take interest. Offering kits, as is commonly done, is not a violation of this rule, as you are not manufacturing the device.

The bottom line is, we, Amateur Radio Operators, are not required to use Type Accepted Equipment.

I've seen this happen before. Now understand, I am NOT saying this is what has happened here, I am just saying that this has happened on other auctions.
What happens is the seller is not happy with the price that he is getting so he goes to his other sign in name and makes a high bid on his own stuff. Sells it to himself and posts positive feedback to the buyer and seller which is himself.
Later, the items come up for auction again with a slightly different description and a higher start price with a different seller id.
Again, I am not saying this has happened here, just that it has happened in the past.

This is as good as it gets. A real beauty in all ways. If you ever
wanted
a really nice Collins 75S-3 you just found it. Has filters for AM 4.5kc,
SSB 2.1kc, CW 250Hz.

Hi !

I have a Kenwood TM-742a and have a problem with the 144 MHz Unit: a componment is burning. I think it's a fuse. The location is near the negative power cord.

Look at the picture at : http://www.perriard.com/742.jpg

Please help me if it's possible, I'm verry happy with this radio.

Thanks in advance and verry best 73's from Geneva / Switzerland.

Sebastien, HB9ICC

1446. Full set of RCA vacuum tube databooks

Hello,

I was given a full set of the RCA vacuum tube databooks that date back to
1940. I really have no need for them and I am considering selling them.
The only problem is I don't know what they are worth.

Does anyone have an idea of their value??

Paul

yes i agree they always tell us to use filters. well its dam hard to set
up a filter for FA when they usr FS. so if your going to use auction
then please use FA so we can get rid of the unwanted garbage.

I have a HyGain 10/15/20m 5 element beam and Mosley 40m 2 element
beam that I would like to trade for manpower. Here's my situation.
This system is still up at my old QTH. I need to get it down, as we have

moved to a new QTH. The system is located in Orlando, Fl. I want
to install the tower at my new QTH for 160m vertical use. But I'm not
interested in the beams or rotator system to go with them. I'm willing
to
give the beam's and rotator system to anyone who has the equipment
and time to take the tower down. It's 85ft of Rohn 25g tower.

Anyone in the area that's interested can contact me at:
gwt@mpinet.net

Hello Robert: I saw the ad on TV about these metal decal type range boosters. I think they are just a add on ground plane that may actual increase the field strength some. It would be neat to do some field strength testing.

And I believe that it might even add some field strength advantage to a small FRS 460 MHz radio. Maybe some aluminum foil, made in a few shapes, tried in a few places around the hand held unit? Worth a try I would think.

Then again I could see a company trying to sell such a item that only gives a dB or oe less field strength advantage, and possibility stretching the truth.

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

I'm Mike, W9RAT.
At The Auction Block, we believe in member appreciation, not ridiculous fees! We currently have auctions from dolls to camping gear! All auctions are FREE through 7/30/01. If you join this weekend, I'll give you a $5.00 credit in your auction account for becoming a member. To redeem the credit:

(1) Go to our site at: http://www.theauctionblock.tv/ and click on register (Main page, top menu).
(2) Complete the registration form. You will receive an email with a temp password.
(3) Return to the site, and confirm/change your password.
(4) Then send email to: WL7CJU@SKYENET.NET telling me your username.

At The Auction Block, $5.00 = 5 auctions! ($5.00 credit redeemable only at The Auction Block as auction credit, not cash. Email must be sent prior to midnight, July 29, 2001). Hope to see you this weekend!
Thanks, Mike. The Auction Block, $0 Commission & Free Classifieds.

The commercially manufactured amateur radio transceiver WHICH has a receiver that operates above 30 MHz must be Type Certified under FCC Part 15 rules.

The transmitter section only needs to be technically compliant with FCC Part 97 rules. The very same rules any United States amateur radio operator must be compliant with for home brew equipment.

The receiver is tested by a testing lab. The transmitter section is tested with in the manufacturers own house and papers certifying the compliance with Part 97 rules are sent along with the FCC Part 15 testing lab information.

NO made for Amateur Radio HF transmitter nor receiver that operates below 30 MHZ is tested for anything by a testing lab for certification period, again it only needs data from the manufacturer showing the device meets FCC Part 97 technical requirements. Made for Amateur Radio HF Amplifiers must be Type Accepted to show they do not operate between 24 and 28 MHz. I think the commercially made Amateur HF Amplifier can not have even 1dB gain in that range, but don't have Part 97 in front of me.

If you own a SGC , SEA or Icom marine HF transceiver it does carry a Type Acceptance as it is designed to operate under FCC Part 80 rules.

Have a look at your made for Amateur Radio Only HF transceivers, none generally will show any Type Certification nor an FCC ID number as they do not require that. The manufacturer does tell the FCC how many products it imports in a monthly report.

Spent 11 years at Icom, the above is how we handled products and is where my information is from.

Is your 2-meter transmit working? If not, you may have blown the
Toshiba final amplifier module. About $80 U.S. if you replace it
yourself.

Dick - W6CCD

If this rig is like the IC22S I have (and I think that's likely),
unless someone has done mods to it, there are no wires to the acc socket
on the back. Icom left that open for whatever use one might put it to. On
mine I added some wires to go to an external box (using diodes and
individual switches) that allowed me to access more than the 23 channels
on the selector switch. Also, the 22S, without mods, did not go below 146
MHz. Basically you're looking at a rig that's in the neighborhood of 18
to 20 years old which might not be worth it to mod for packet.

fine, ok then what are the rules about selling stuff that you build.
say you build yourself a 3000 a7 amplifier and you decide to sell it.
is it legal for you to sell it to anyone you choose or do the rules
stipulate that you must sell it to only licensed amateurs?

I used to have one of those, but has been a few light years ago. I bet
that plug is for the remote freq controller. They sold an option that
would let you run an external "mechanical counter" like the one that is
on the radio for remote freq control. I bet thats what the plug is for.
There may be other options also, but I forgot em... MK

I believe for amplifiers the FCC rules stipulate that a licenced
amateur can build ONE device per year for personal use. You ARE
allowed to sell it to someone else. There is no restriction on who you
sell to. THEY are responsible for operating it in a legal manner.

I do not know how radios are handled.

Hi all. I picked up a GE "Searcher 2 plus 2" scanner today.

It's a relatively large AM/FM portable radio, with a 6 channel VHF/UHF scanner built in.
No crystals, no synthesizer, but each channel is tuneable.

It's pretty neat, but is only scanning channels 3-4. The rest act like they're turned off.

Anyone have a schematic for this beast? It would be fun to get it working again.

Thanks.

John KB5AG

While there is no good registry of "reasonable appraised prices", you can check any of the sites below to get a good idea of what radios are selling for on places other than eBay. I generally check a couple of these when I am buying or selling a radio locally.

http://classifieds.qth.com/classifieds/
http://www.2wayradioauction.com/index.html
http://www.dxer.org/ham_sw.html
http://www.amradiotrader.com/
http://www.bro.net./barc/swap/
http://www.eham.net/classifieds/
http://www.k1dwu.net/hamtrader/
http://hamgallery.com/cgi-bin/classifieds/classifieds.cgi
http://quality-enterprises.com/tcrg/OnlineFest/index.htm
http://www.arrl.org/RadiosOnline/
http://www.hky.com/~sanfordb/swapshop.html
http://www.hamswap.com/
http://www.ring.com/trading/hamradio.htm
http://www.kacweb.com/cgibin/viewradioad.cgi
There are a lot more sites you can check out, but these are the ones I have bookmarked.

If you want to check to see the going prices for radios on eBay check out:

http://www.aade.com/hampedia/prices.htm

This one will help you spot when prices are getting out of line even for eBay or for spotting whether or not you will be better off waiting for a different auction for a similar radio.

I'll be that person meant the price was 950 after the 250 rebate.

I just bought one at AES for 899 after the in store rebate. Buy the tuner and the extension kit and there is no shipping charge and no sales tax.

I think they have changed it now to be "certified in the FCC database". I don't think they use "type acceptance" anymore. I know they don't for rf amps. But yes, all new radios or amps that exceed the "one per year" rule, and are sold to the public in the US must be certified. You will notice this in ad's where the radio is shown but they say sales pending due to fcc certification or whatever. But once a ham owns a radio, he can do whatever he wants with it. Also a ham can make anything he/she wants, but if they sell more than one a year to other hams, they have to go though the certification. I'm fairly sure anyway...Don't take this as gospel...:/ MK

Hi,

I agree that there can be some weird scams going on with eBay. The sell it to your buddy and then he sells it back to you deal is about as old as auctions. Certainly with something that is a one of a kind I can see how the process would work. I'm not as sure it works as well when you are dealing with stuff that there's a large supply of. I have several items here that if the price keeps going up, well they're for sale. I suspect that a lot of people look at it like that.

I would *never* rule out insurance scams or something similar. It would take both the buyer and seller to make it work though. Seems like there are easier ways to make (or steal) money.

It's a jumper made to open up if the radio is hooked up backwards (power wise). Make sure the diode beside it is not shorted and jumper the trace with a piece of wire.

Where in Part 97 does it say that anything other than an external power amp operating below 144 Mhz needs to be certified or type accepted? Please give us the reference. The ARRL's FCC Rule Book specifically states on page 4-39 that external RF power amps are the only amateur equipment requiring type acceptance.

All VHF and above receivers require compliance with part 15 rules so your HT probably does have a certification.

Hi Dick,

No, it's not the final amplifier. The 742 does not ignite any more.
The component which burned is directly in series with the electric
cable (negative), beside the diode of protection for the inversions of
polarity.
Thanks for your help.

I think if you look closely at the ads, with the disclaimer about waiting for FCC approval, you will notice that the equipment is either a receiver or a transceiver. In that case the FCC has to check for conformance with the restriction on cell phone monitoring etc. An amateur receiver can be manufactured under Part 15, which can require the type acceptance. In fact I remember seeing a Part 15 sticker on my Icom IC-706MKIIG when I first opened up the box. Hummmm.....

Exactly - it contains a VHF receiver so it's certified to Part 15.
That does not mean however that all commercially manufactured amateur
equipment requires type acceptance. If all amateur equipment required
type acceptance or FCC certification it would be included in Part 97,
the amateur rules.

That is because the receiver operates above 30 MHz it has to be
tested.

They do not test the transmitter, the manufacturer tests it and only
needs to comply with the FCC Part 97 rules.

Many FCC examiners who only use the equipment database for
identification had little to no idea the product actually transmits.
Look at the grant for the IC-706 it says nothing about it transmitting
the grant calls the IC-706 a receiver.

What really is the issue is most of these products can scan more than
two frequencies so Part 15 comes into play. Most of your VHF and above
amateur equipment is Granted as a scanning receiver.

I fielded many telephone calls from the FCC on that issue when I
worked for Icom..

Have someone here look at the back of their IC-735 HF only radio.
There is no certification number for the IC-735.

Have a look at this page. http://www.fcc.gov/oet/fccid/ Under Grantee
Code type in the first three letters of your equipment's FCC ID
number, for Icom it is AFJ. If you type AFJ in you will receive back
at a minimum 10 items at a time, all the equipment Icom has submitted
for FCC Type Acceptance; Certification or Approval since it began

selling into the US.

If you type in AFJ under Grantee Code and IC-706 under Equipment product Code then you will get back 6 - FCC GRANT OF EQUIPMENT AUTHORIZATION for the IC-706 series.

Gary KF7XV

As an update, I would like to clarify this problem a bit:

This problem seems to occur only when using voice modulation in SSB. It does not occur when using modes such as SSTV or PSK31 on SSB where the carrier level remains fairly steady. Oddly enough, there is no problem when operating CW, even at 30 WPM or more...???

Anyone else experience this with their IC756PRO?

W7RJR

P.S. I understand not all units experience this problem. Would be interested in learning serial numbers of those with and without the problem.

An amplifier built by an amateur for their personal use may be sold, but only
to another amateur, and only one per year.

Exactly otherwise you would have X-force and Davemade amps all over the
place with the manufacturer saying well they are for ham use It is up to the
end -user to use it correctly.. Nah Sorry I don't work that way fellas ..

It's just a short cut perhaps to say 14, 317,150 Hertz. Most rigs drop the last zero and tune 10 hertz at a time.

Very common interference...it's the 4th harmonic of color reference xtal in all color TVs. It has another annoying harmonic that you'll hear too, at 28.636. The fundamental frequency is 3.579545 MHz. That puts the harmonic frequency at 14.318.18. If you're listening in USB, 14.317.18 will give you a 1 kHz tone in your speaker.

Here I can hear harmonics all the way to 2 meters. Using a 2 meter handheld and dfer, I walked down the alley and pretty well had the house in question surrounded. The signal I hear is coming from that house it seems, but it could be a coax leak or something. I didn't think that cable used anything close to that frequency, but again, perhaps a harmonic of some other frequency.

I have 3 units of Tektronix scopes. The model is 5101N.

Unit A) Comes with a 5A23N Amplifier plug in. The scope has a dent on the top cover.

Unit B) Comes with 2 5A20N Differential Amp plug in and a 5A23N Amp plug in.

Unit C) Comes with 5A20N AND A 5B10N Time Base Amp plug-ins.

All units have not been tested and I would like to sell the complete lot to one buyer.

I am asking $100 for all 3 plus shipping.

Mike

Thanks for the learned response. The tone is ever present, day and night. I presume the TV isn't on continuously, but would it be something in the 'instant on' circuitry that would just keep on humming? Does it present a hazard to the homeowner, i.e., might it burn his house down if gone uncorrected.

Serial 02121 - never noticed anything wrong since getting the PRO last September.

The tuner in the IC-765 was prone to hunt on SSB but only if it was not adjusted properly. I never experienced the problem but have read of it in the Icom Service FAQ. Two pots require adjustment to properly "damp" the feedback system to prevent the hunting. Perhaps the PRO uses a similar scheme . . .

I suggest that you post this on the Icom reflector for comment.

Check your service manual for the adjustment procedure for the blanker.
Mine (756PRO) is a little aggressive but hasn't been enough problem to
warrant going into the radio.

1531. BEWARE - Copper Electronics

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-30 00:04:27 UTC
From: Jake@world.net
Message-ID: <3B64A48B.CE86E60E@world.net>
Source record: 56486

I purchased a 10 meter Mirage 2950. Copper said it worked on 15 & 10 meters. When I received the rig and installed it in my vehicle I was surprised to find the radio worked on "11" & 10 meters. After several telephone calls and emails to Copper Electronics they refused to do anything about this radio situation. In fact they told me ALL sales are final and refused to take back the radio and refund my funds.

Now it's time to undo what ever they did to the radio and put it back on the ham bands.

That was Copper Electronics 3315 Gilmore Industrial Blvd. Louisville KY 40213

This is just a friendly piece of "BEWARE" information.

Why not find the source of the noise !
It will make all your ham'ing more fun. Blankers will take some of it out,
but cause distortion. You have one of the best radios out there, if there
is too much noise for it to handle.

FIND THE SOURCE of the NOISE.

You know why they replace them? I can think of several reasons. The biggest is that the manufacturer along with MSHA require the harness to be replaced after ANY fall. Thanks, but I'll trust my life to only a NEW harness. You don't know what a used one has been through.

Anyone for Russian Roulette?

Many TVs do keep some of their circuits running even when they appear to be off. Same for VCR's that have tuners, and as someone else mentioned, computer monitors, which many people never turn off.

Hi,

There is no debate about bad things happening in the world, they do. The objective is to keep those bad things from happening to you while you live a normal life and not one that is dominated by fear and anger.

As I read the listing it does not mention anything about new in the box or un-used. I would assume that the cards are > year old used pulls. With no box, cables, or doc's that's about all they could be. The specific mention of no warranty or guarantee also is a good clue. If it was new there would be a manufacturer's warranty. He does not mention testing them.

I'd say you got what he advertised as selling. You need to read the listings very carefully both for what is there and what is not there. Anybody can copy a big block of text on the spec's of a card, ignore that stuff. What you want to know is if it's new and if there is any kind of warranty. If not don't pay more for it than you would a dead card.

Looks like he sold about 240 pieces in his last two weeks in business. Of that about 10 to 15 turned out to be junk. That's about 3X better than the return rate at CompUSA or 5X better than Best Buy on new in the box stuff. They take them back as returns, he didn't. As far as I can tell the guy got thrown out based on his lack response. I know of no other way to go "not a registered user" in three days after a sale. Possibly if you had left feedback he would have been dumped faster.

I have purchased defective merchandise from just about every kind of sales channel there is. Sometimes they take it back sometimes they don't. I'm still looking for a book I bought back in 1973. I'm sure it will get here one of these days. I ordered it from a ham radio store in Chicago. I'll have to admit, I've bought things in stores since then.

That said the guy is obviously a jerk and he's no longer able to repeat what he did to you. In roughly 500 purchases on eBay I have yet to run into the problem you did. I do have the same sort of thing going on with a paintball store down the street though. Gotta watch those stores.

Bob

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

Specifications link:
http://www.yaesu.com/amateur/ft847tx.html

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

After 32 auctions on ebay, as both a seller and a buyer, I'm convinced that eBay is just not worth it. I have been intentionally misled seven times (items that were not even close to the description, pieces or parts missing, not working, etc), had problems getting my items four times (long delays in shipping, items damaged, etc), have been robbed three times (money sent, no item), and so forth. In fact, I've only been completely satisfied with four of the auctions (the items were everything I expected).

Now, please understand that I'm not a picky person. I understand that these items are used and are not going to be in perfect condition. But I do expect the seller to be honest with the description and to fully disclose any obvious damage, missing pieces, or anything else that differs from what a person might reasonably expect. And I certainly expect an item to show up if I pay for it.

In the end, eBay should not allow sellers to use false names (screen names). Each seller should be required to place their full name, full address (not a post office box), and a telephone number, on each auction page. People representing themselves as companies should be required to show that they have a license to do business in the state they reside in before being allowed to use company identification on eBay. All this alone would cut down the sleaze on eBay dramatically.

Based on my experience as a seller, it is far too easy to rip people off on eBay. People can use any name they desire, provide a false address (a hotel is popular), and not a sole could ever find that person. If the buyers post too much negative feedback, simply sign up with a new screen name and you're right back in business ripping people off. This could go on forever (and it is going on right now on eBay) and eBay will not do a thing to stop it.

I'm posting this for my computer underpriveleged buddy John Soine, WB7WQK. He's looking to sell the below listed rigs, or trade a combination of the following for a 756 or 756 Pro. Here's the list:

Icom 751, just brought back from Icom (he lives within driving distance to them) ALL updates, repairs, and alignments done. With SM6 Mic, Manual, and built in PS35 Power supply. $650.00 O.B.O.

Kenwood TS930S/AT w/CW Filter, MC60 Mic., Matching Speaker w/filters, original double boxes. Needs power supply repaired, cosmetically a solid 9. $550.00 O.B.O.

Alinco DX70TH 6-160 meter, 100 watts out all bands, Mic, Manual, Box. Has matching EDX2 HF Autotuner. $700.00 O.B.O. for the pair.

Please contact John directly @ 360-428-5995

This is typical of what I would expect from Copper. They are a big time CB dealer and major endorser of illegal mods and freeband operation.

The 2950 is designed and targeted for freebander operation, it is just sold as a "10 meter" radio to skirt the FCC regulations. If they actually delivered a 2950 working on 11 meters, and not just the mod sheet to put it on 11 meters, I would get in touch with Riley Holingsworth rholling@fcc.gov). I'll bet he would be interested in your issues with Copper...

_____

Quite right, which is why I'd never buy something "critical" from a seller with few or no feedback listings. It's the old thing of knowing something about who you are dealing with. I've bought a couple dozen items there, some in the $200-300 range and been satisfied on every one. I've never sold anything yet.

Having eBay require "real" names and addresses would mean eBay would have to somehow verify them. That'll never happen; they don't have the resources to do it.

If the "first sign of trouble" is an accident, then someone has not been
looking for trouble like they should; i.e. inspecting the safety belt
and lanyard before each use. This kind of equipment is designed so that
defects are readily apparent, but you do have to take a moment and look
for them.

First is the Mirage B-55-G. This is new in the box. I got it about a
year ago
and just never used it. It is 1-10 watts in for 50+ watts out. Will
operate FM/SSB and CW.
Has a built in GaAsFET preamp. I am asking $85.00 shipped. It cost me
~$100.00 new.

The second is an RFC 4-32. 440Mhz, 200mWatts to 5 watts in for 20+
watts output.
Will operate FM/SSB and CW. Has built in GaAsFET preamp. It comes with
the manual
and is very clean. I am asking $65.00 shipped.

Please email direct as this is going to a few of the news groups.

Thanks in advance, John w1hzh

I didn't know this was still kicking around. Check the rules
out by reading them. Also, note the difference between
"type acceptance" (commercial) and "type approval" (part 15)
for manufactured rigs and amps. "FCC certification" hasn't
been required since the 80's.

Then note FTC fair trade laws regarding discrimination.
It is not required to have a license to buy transceivers.

The laws regarding amps in recent years, is how FCC is
trying to close up ham radio as a loophole. Also beware,
getting a license for your ham radio doesn't cover illegal 11 m
operation. Along with the license is FCC inspections of
your station and equipment for compliance and signal purity.
So the whole thing falls to the licensee, or operator (if
unlicensed bootlegger). It's like a blanket search warrant,
but you can refuse, but then you lose your license and wind
up on charges for refusing a lawful inspection. The FCC
doesn't work like regular laws either. Here's how it goes.
when the FCC decides you have broken the law, they issue
a "Notice of Apparent Liability" which is basically a fine of
several thousand dollars. If you want to fight it, it comes out
of your pocket for the legal expenses to get a federal judge
to hear your case. Guilty unless you find a way to prove
yourself innocent. A lot of Hams have their radio shack out
back, separate from their house.

"Type Acceptance" applies only if the equipment is to be commercially
manufactured and distributed. Any licensed amateur can homebrew radio
equipment as long as the equipment meets spurious harmonics and/or output
standards.

EBAY does not really care about you and me. They only care about their investors and stock price. And, their stock has risen sharply during this past year. Rising stock prices, happy investors; that equates to EBAY management that everything is just fine and no changes are necessary. Don't expect to see any changes that would make them have to work or lose money! They don't listen to the ripped off buyers who complain on their Trust and Safety Board. EBAY does not care!!! Stock goes up = Happy owners.

And it would be so simple to verify buyers and sellers and obtain valid identification. Sort of like PayPal does to ID it's depositors. At this time EBAY is a haven for fraud. Their only compitition is YAHOO, and they are not very good either.

I do look at EBAY feedback and if I want an item, I e-mail the seller and ask for ahome phone number to discuss the offered item. If a person won't give me a number, they won't get my bid.

EBAY needs to police itself and clean up the opportunity for fraud and get rid of people on its system. I'll get off my soapbox now! 73's

I take offense to being refered to as sleaze. I do not openly share my address and phone number for 2 main reasons - I hate junkmail/telemarketers and because of my profession, I do not want my address and phone number to be easily found (no, it's NOT a criminal profession! :)). Hell, on my ham license, I don't even have my address. It's a PO Box about 30 miles from where I live. I only get mail from it every few weeks because it belongs to a ham radio club and they were nice enough to allow me to use it, again because of my profession. So, just because we're using screennames doesn't mean you can't find us on Ebay. Ebay has all our real info and in the case of legal action, I am sure they'd be more than willing to give it up.

FT: Computer gear for HF Rig / equipment

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment. Specifically interested in the below units but open for other suggestions. I am workable, will put money into it if your gear is worth more.

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. Tower case.More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T

Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment (cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!

1575. Kenwood TS-570 MARS/CAP mod

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-30 19:59:29 UTC
From: sbertsch@postbox.acs.ohio-state.edu
Message-ID: <9k4eb1ms1@layla.net.ohio-state.edu>
Source record: 56379

I have a question about the MARS/CAP mod for the TS-570 (removing R41 on the control board). Does this open up transmit on all frequencies?

Now, before a Radio Cop has a knee jerk: I only ask because there has been talk of re-aligning 40 meters with the region 1 allocation, and ARRL is now proposing a new band around 5MHz. We have gained and lost frequencies before, and I'd rather buy a radio that would not become obsolete.

Thanks,
Steve N8KWV

Get the little Maldol/Comet 3" rubber duck. MH-210? Just a bit down from the bigger antennas but looks real nice on the FT-50, is very rugged and won't poke you in the eye. I have used one for years on my FT-50 and bought another for my VX-5. As with most HT antennas, you usually can hear more than you can transmit to.

No. :-)
The wavelength at 186,232 kHz is in the LSB of the
picture carrier of TV Ch9.
It'd be a *Real Tough* calling freq.

Bob,

Greetings. There are some tricks for decoupling
RF from power lines. You can create a choke without
touching the power line itself. However, no one
here has discussed RF Exposure. That is probably
the greater issue. You need to do an exposure
survey. Get the ARRL book or borrow mine.

One thing that is somewhat interesting to do is to click on the feedback section of the high bidders in high priced auctions. You cant see everthing that they have bought, but you can see everything that they have received feedback on.

Some of the buying patterns appear to me to be unreal. It always seemed to me that it was reasonable to see someone pay an unusually high price fro something unique, but often you see it done for just ordinary stuff.

And how did ebay become an addiction?? Some of these guys buy several things a week, although a lot of them are for petty cash 10-15 dollar items.

I has happened in the past, and it will happen again that some of these guys will end up in the hoosgow--even ebay in their financial reports has said that they expect regulatory agencies to take actions against them.

I agree that an increase in the public nature of the process would help make the market more viable, but it might not help prices. Until then its clearly caveat emptor

and apparently also seller beware if you're not a member of the regulars.

1582. Question about cutting new mobile antennas

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-30 22:50:39 UTC
From: kl465@yahoo.com
Message-ID: <81e10905.0107301450.564d0181@posting.google.com>
Source record: 56386
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I just received my new Larsen NMO 1/4 wave 2 meter antenna and NMO magnetic mount. A pamphlet was included with the antenna giving the lengths that the antenna should be cut to based on operating frequency. My question is this: is the specified rod length the actual length of the rod when it is taken out of the mount, or is the specified rod lengh the length of the rod when it is mounted? About an inch of the rod goes into the rod mount, so I'm just curious if the specified length refers to the length of the rod when it is removed from the mount or the length of the rod after it has been mounted in the mount. Also, this may be a stupid question, but does the little "ball" at the top of the antenna count as part of the length of the antenna?

Also, the pamphlet gives lengths for a number of frequencies, including 140 MHz, 145 MHz, and 150 MHz. Since I plan on working the whole 2 meter band (and not just one specific frequency/repeater), would be best to cut the antenna to the 145 MHz length (this is 18 5/8 inches)--the length that corresponds to a frequency in the middle of the 2 meter band?

Thanks in advance to anyone who may have some advice!

well i think its measured from the very tip including the ball to the top
of the mount and if you cut the antenna for 146.500 your SWR will be fine
thru out the entire 2 meter band after all you will only be operating from
145-148 on FM anyways
also dont just wack off the given amount always cut less than it tells you
then check the SWR cause nothing is a given and you can always cut more
off but its damn hard to add more once its cut off

I don't have the info infront of me, but the total sticking out of the mount should be around 19 inches. Cut it to where you have about 20 inches sitckingout of the mount and measuer the SWR from the bottom of the band to the top. If the SWR minimum is toward the low end of the band as it should be, cut some off. Maybe 1/2 inche at a time. As you get near where you want the swr cut off only aobut 1/4 inche at a time. When the swr is lowest around 146 mhz or so then stop. YOu may be able to makes a fine adjustment by sliding the rod up an down in the mount a slight ammount.

the 1750 meter transverter kit is no longer available, and the parts
list given does not describe adequately the parts, specifically those
labeled U1, U2, U3 etc.
Maybe Jparker can update the parts list for someone that wants to still
build the kit, apparently the circuit board is still available.

Iambic as in alternating. If you hold both the dot and dash paddle, you will get alternating dots and dashes. If you want to send a Q, you hold the dash paddle and just tap the dot side to insert the dit.

I think the keyer is iambic, not the paddles, but you do need the proper type of paddle to use one, so I guess in a sense you could call it an iambic paddle although it is just a paddle that has identical paddles on each side that are independent of each other. I think all it means is the ability to squeeze both paddles at the same time to make letters, and the dot/dash memory. So with an iambic you can make a "C" either by side swiping back and forth 4 quick swipes, or you can squeeze both together while leading the dash just a tiny bit in pretty much one motion. I use an iambic keyer and paddle, but I actually side swipe more than I "squeeze" letters. I never was that crazy about the squeeze method for some reason, but I do mix it in sometimes with the swiping. Most all the new radios have the keyers built in, so you just need a paddle. I use a bencher. MK

Hi,

I'm looking for some of the following Icom HT accessories for my growing number of IC-2SAT's...

BP-84 pack in good or repairable condition
BP-85 pack in good or repairable condition
BC-72 rapid charger in working condition (needn't be great looking)
BC-74 wall charger
BA-12 charge adaptors for the SAT series internal batteries.

I don't need any of this to look new, just be functional, or repairable in the case of the battery packs. Please e-mail me with info on anything you might have for sale.

Thanks muchly in advance

the measurement that is given on the cutting chart is the total length of
the stinger from ball to end
cut it a bit long so you will have some trimming length

From the photos I've found on the net, the IC22U appears to have more in common with the IC24 series than it's predecessors in the IC22 series. It uses three decimal switches to set frequency, so it's not limited to the same frequency range as the 22S.

When I get a chance I'll open it up to see if there are any connections to the ACC jack.

That seems likely. I suppose if that's the case, one could buy/build a remote control head for the radio. Not as sophisticated as today's units, but not a bad idea.

Thanks.

>Someone please explain what makes paddles "iambic" ?

According to my dictionary, iambic goes back to Greek poetry.

"Iambic" pertains to, consists of, or employs iambs.

An iamb is a prosodic foot of two syllables, a short followed by a long in quantitive meter.

Example:
come live / with me / and be / my love

So, if you have two paddles, and one produces a short tone, and the other a long tone, they're iambic.

While I agree with you concerning addresses, the same is not true for names. Ebay already requires sellers to give a credit card, which has their real name on it. Sadly, eBay never compares this with their database of existing users (old sellers). Doing so, with a rule that sellers cannot use fake names, would have an positive effect on the dishonest behavior.

The 1/4 wave spike is very broad in its tuning and has
roughly a 10 MHz bandwidth. Cut the rod to 19" until
you have a chance to check the SWR if you are a
perfectionist. Beware that many CB type SWR bridges
and PL-259's can introduce more mismatch that you
might find with the chart cut 1/4 wave spike anyway.

If it is difficult for you to find a Bird or similar instrument,
You can simply cut the whip to 18 5/8" just like the
chart says and forget it. You will want a Bird though
(or whatever) for gain type antennas, because they
have a much narrower bandwidth. Motorola 1/4 wave
antenna rods are pre cut (except for low-band) and
ordered for different band segments.

Log Windows 3.07.34.01 released!

Update adds support for voice packet spots and parallel port devices under Windows NT, Windows 2000 and Windows XP, MARS and 11 Meter Support!

Muscle Shoals, Alabama. July 30, 2001: Creative Services Software announced that version 3.07.34.01 of the popular logging program Log Windows has been released. The release includes fixes for the M2 Rotor, 1.2 GHZ support for Kenwood's new TS-2000, 32 bit calls to allow voice packet spots and parallel port devices access under Windows NT, Windows 2000 and Windows XP, and frequency support for both MARS and 11 meters.

"Putting MARS and 11 meter support in will allow those users to log nets and log contacts with their friends", said Rick Ruhl, W4PC, "This is the first version that we have released that will only install under Windows 95 or greater. We'll still have 3.07.34 available for those running Windows 3.1, but that is our last release under 16 bit Windows"

The product retails for $69.95 and upgrades from release 3.06.15 or earlier is $40.00. Those who have purchased version 3.06.50 or greater will get this upgrade free. It also appears on the Digital Trio CD. It is available from dealers around the world, as well as direct from CSS.

Log Windows is owned by SCO, Inc and is maintained by Creative Services Software.

Creative Services Software is at http://www.cssincorp.com

The Log Windows homepage is at http://www.logwindows.com

Windows, Windows 95, Windows 98, Windows Me, Windows NT and Windows 2000 are Registered Trademarks of Microsoft Corporation.

1616. Re: Iambic paddles question?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-31 17:49:40 UTC

Source record: 56320

Some paddles can make contact on only one side at a time. Some can do both sides at a time. These were originally refered to as "Squeeze paddles". Except for some antiques at flea markets you probably won't see the old "single lever" paddles much.

Keyers then deal with the dot dash completion and insertion. On the keyers I have used, you can hold down the Dah, and hit the Dit and it will insert the dit between the Dahs. Some advertise this as "dot insertion" instead of using the term Iambic.

1617. Cellwave - Phelps Dodge PD-526 Duplexer REDUCED

Newsgroup: rec.radio.amateur.equipment
Date: 2001-07-31 18:31:29 UTC
From: ligosa@aol.com
Message-ID: <20010731143129.29022.00003485@ng-ch1.aol.com>
Source record: 56321

Cellwave - Phelps Dodge PD-526 Duplexer REDUCED

was $375

I Will take $300 + shipping

These RFS units use a total of six pass-reject dual-notch resonators with three resonators per channel as the normal arrangement. They are suitable for many applications other than duplexing and their dual-notch circuitry provides a pseudo band pass characteristic for high Tx-Rx isolation. These units are available with reversible mounting brackets to allow flush rack mounting with connections in the rear.
Product Specifications
Frequency Band 380 MHz - 512 MHz
Application UHF
Type Base Station
Frequency Spacing-MHz 3
Tx to Rx Isolation - dB 100
Insertion Loss- dB 1.0
Frequency Range - MHz 406-470
Tx/Rx Bandwidth - MHz 0.025
Connector Type n-female
Rack Mount Yes
Mounting Standard
Frequency Spacing, Min. - MHz 3
Tx Bandwidth - MHz 0.025
Rx Bandwidth - MHz 0.025
Continuous Power Input, Max. - Watts 250
Insertion Loss, Tx - Ant. - dB 1.0
Insertion Loss, Rx - Ant. - dB 1.0
TX Noise Suppression at Rx Frequency - dB 100
Rx Isolation at Tx Frequency - dB 100
VSWR, Max. (50 ohms) 1.3:1
Connectors - Ant. Port N-female
Connectors - Tx Port N-female
Connectors - Rx Port N-female
Temperature Range - °C -30 to +60
Height - in. (mm) 5-1/4(133)
Width - in. (mm) 19(483)
Depth - in. (mm) 14(356)
Mounts in 19" (483mm) EIA Rack (Yes/No) Yes
Weight - lbs. (kg) 23(10.5)

Features/Benefits
• High isolation

Minimizes interference.
• Temperature compensated
Assures consistent performance across temperature and power range.
• Low insertion loss
Maximizes effective radiated power.

Message-ID: <6207-3B67016E-71@storefull-135.iap.bryant.webtv.net>
Source record: 56322

I got a real good deal on this mic at a ham fest and now I'd like to change it over to use with my Ten Tec gear. The present cord has a modular plug on each end that looks like a telephone plug. I plan to remove the jack from the circuit board, locate the appropriate nodes.... (PTT, COM, MIC) and attach a standard cord with a 4 pin plug on the business end.
I don't know where the pre amp board is drawing it's power from, ... apparently from one of the wires in the existing cord. Anyone have a diagram for a 550T? Thanks, Johnny W4XKE

Hello Dwight,

I've had the opposite experience. Never had a bad transaction on eBay,
and I've been both a buyer and seller for several years now. I should
note that I've only done low-value items (under $100). Most of the
items have been ham radio related.
>
> In the end, eBay should not allow sellers to use false names (screen

I partly agree. eBay should require that all users post valid email
addresses. Also, changing usernames should be prohibited UNLESS the
old username's feedback is retained. No more "sunglasses".
>

The trick is to look carefully at the seller's feedback. But eBay can
do more to prevent this sort of thing.

news:20010730194200.25858.00001890@ng-cf1.news.cs.com...
> Someone please explain what makes paddles "iambic" ?

As previously pointed out, the term 'Iambic' refers to the keyer and not the paddles.

Keyers come in two flavors: Iambic and Ultimatic.

Iambic keying has been described as sending alternate dots and dashes as long as both key paddles are held closed.

In Ultimatic keying, if the dot lever is held closed after the dash lever is held closed, a continuous string of dots will be send.

On the other hand, if the dash lever is held closed after the dot lever is held closed, a continuous string of dashes will be send.

In other words the last closed lever has priority.

Some operators prefer one over the other. Some letters are easiest sent using Iambic keying while others are easiest sent using Ultimatic keying.

In either case, the some dual lever mechanism is used.

And of course if only one lever is closed with either Iambic or Ultimatic keyers, only dots or dashes will be sent.

I used to know the model number of it, but forgot. Seems like maybe
EX-???? or something like that. It had the same exact rotary
thumbwheels/pushbuttons as the radio, but on a remote plastic case that
ran on a cord to the rig. The 22U is actually a good radio if it's still
working right. It has 5 helical resonators inside and has a tight
receiver, with low intermod numbers. For it's time, it was very good.
Just not fancy. And it can be modded for MARS coverage also, but it's a
PIA cuz you have to switch manually between transmit and receive. MK

Try going back and looking at the paper that came with the
antenna. I think you will find a diagram that shows where to do
the measuring for the correct length.

From Alan, W4NCQ.

No e-prom upgrade.

Maybe somebody would like some facts:

From: "Aaron Camp" <aaron_camp@icom.co.jp>

Thank you for your mail, and thank you for your interest in ICOM products.

The new IC-756PRO2 is a completely new product, despite the similar
appearance to the 756PRO.

The following improvements have been made.
1. Sharp and soft IF filter shape are
independently selectable for SSB
and CW

2. Improved 3rd IMD characteristics
and wide dynamic range

3. One-touch record/play switch on the
front panel

4. Digital voice memory with external
control capability

5. Extended 1/4 tuning step function
and BPF function for SSB-D mode

6. Variable level setting noise blanker

7. SSB/CW synchronous tuning

8. 4.9-inch color TFT LCD with new color settings

The 756PRO2 cannot be upgraded to the new type.

Finally, no definite dates for export have been made yet, so we suggest that
you stay in touch with your dealer or keep an eye on the Internet for
release dates.

Again, thank you for your mail.

Best Regards,
ICOM Support Center

1631. FS: Vectronics HFT1500 antenna tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 01:21:59 UTC
From: JIM RUNGE <k6jr@arrl.net>
Message-ID: <KNI97.1480$LI5.438645@nntp1.onemain.com>
Source record: 56334
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

For Sale: Vectronics HFT1500 antenna tuner, one month old, only used once to make sure it works. I am moving and will not be able to use it. Like new in plastic with manual and box. $290
I can be reached at 760-323-4464 or k6jr@arrl.net 73 Jim K6JR

1632. FS: MFJ 986 antenna tuner

Newsgroup: rec.radio.amateur.equipment

1634. SWR meter for 6m/2m/70cm?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 01:36:01 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20010731213601.02028.00000892@mb-mf.aol.com>
Source record: 56337

Can anyone recommend a decent SWR meter that will work 6m - 70cm and costs $100 or less? The minmum power would have to be at least 50 watts. If anyone has any suggestions, please email me direct.

1635. Buyer Beware

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 01:51:49 UTC
From: Brian <KG4IJR@atmc.net>
Message-ID: <9k7nl8$228$1@news3.infoave.net>
Source record: 56338

A while back on this newsgroup, I responded to the following ad:

From: <Hit365@webtv.net>
Newsgroups: rec.radio.amateur.equipment
Sent: Thursday, June 28, 2001 10:09 PM
Subject: F/S FREQUENCY COUNTER

> F/S TF-1000 FREQUENCY COUNTER
> WITH CLOCK MINT....
> BLACK & GOLD 6- DIGIT COUNTER
> LOOKING FOR $ 25.00 PLUS S/H
>
> FOR ALL BASE RADIO..PLUG IN WALL..
>
>
>

I was interested in the counter, so I responded to the ad. I did look up the seller's email address on deja.com first, but for some reason, it did not return any messages, either good or bad. I contacted him about buying it, and subsequently sent him a money order for $32.00 for the counter plus shipping.

Two days after I mailed the money order, I was dismayed to see another person post a notice for "buyer beware" on this person in rec.radio.swap. I looked up the email address in deja.com again, but this time, there were a number of returns on older newsgroup messages concerning this individual. However, I hoped for the best.

When I received the frequency counter in the mail, I was more than mildly upset with what I received. I first opened it in the post office and gave it a casual lookover. I noticed that there was a stain on the top of the unit that resembled bird droppings. No big deal, a little rubbing alcohol will usually take care of that. Then I noticed that the buttons on the back, used for setting the
time and 12/24 hour option were out of alignment; rather pushed in and hard to access. I looked over the box to see if it were damaged in any way; at the time, I was still willing to concede that he was basically honest and the unit may have been damaged during transit. Taking it outside into the sunlight, I could see that the digital display was way out of alignment, with the bottom half of the numbers were so far out of alignment as to be not visible.

A short while later, I had the opportunity to remove the bottom cover by unscrewing the four phillips screws holding it in place, to see how great the damage was to the internals of the unit. I was found the circuit board was not even attached -- it was held in place not by the mounting screws, but a couple of pieces of mildewed black T-shirt. This was the reason the LEDs were not aligned.

I never even plugged the frequency counter into the wall to see if it worked. I had no confidence that, even if it should work without going up in smoke, it would not display a frequency congruent to the real frequency being transmitted, nor that it would not short out the finals on my transmitter.

The frequency counter was advertised as being in "mint" condition. Far from being in mint condition, it was not even usable. I was afraid to plug it in or leave it plugged in unattended even if it did survive the "smoke test".

I contacted him about the condition of the equipment he sent me; he was extremely apologetic and offered to send me the money back right away. I replied and told him the freq counter was boxed up and ready to ship on receipt of the money. A week went by with no money in sight. I emailed him again, and he said he wanted the freq counter back before I sent the money.

By now, you can guess how gullible I am. I sent the freq counter back, and he is not willing to refund the money. I am out about $40.00 ($25 plus shipping two ways plus the cost for a money order). He has my money and the freq counter. It seems I am not going to get my money back, so I'll take it as a lesson learned; he is now on my blocked senders list and in my delete file for the newsgroups. I don't even want to hear any response to this message, should he have one. He hasn't told me the truth in any part of this deal so far, and I have no reason to believe he should start now.

If anyone out there decides to deal with Dominic Troisi, email address hit365 @ webtv.net, be cautioned -- this is the treatment I got. See deja.com for more details of other people who have dealt with him.

Brian

1636. To cut or not to cut...

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 02:04:38 UTC
From: kl465@yahoo.com
Message-ID: <81e10905.0107311804.102eda0e@posting.google.com>
Source record: 56339
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I just received a new Larsen 1/4 wave 2 meter antenna and was playing around with it today. As it comes from Larsen, the whip is approximately 21.5 inches long. Testing the antenna at 21.5 inches (this is without trimming the whip to tune it), I got an SWR of 1.35:1 at 144 MHz, 1.25:1 at 146 MHz, and 1.5:1 at 148 MHz. To me, these SWR readings are very acceptable (particularly in the 146 MHz region where I will be spending most of my time) and so I'm kinda thinking about just leaving the whip as is without trimming it. I can't think of any problems that might arise by not trimming the antenna, but I thought I'd just check to see if anyone might have some caveats or insight on an aspect of the un-trimmed antenna that I might have overlooked. From what I understand, 1/4 wave whips have a fairly decent bandwidth, so in a way I'm not too surprised that I had such low SWR readings without trimming the antenna.

Thanks in advance for any advice!

1637. FS: 51J SERIES CABINETS!

>suggestions, please email me direct.

A couple:

mfj 860 cross needle, 1.8-60 mhz, $44.95
mfj 862 cross needle, 2, 220, 440, $54.95
Together, about $100
I like the cross needle meter on my mfj989c tuner; it's about as accurate as my
Bird 43, so I'd imagine mfj's separate meters are okay.

You could also get the mfj 874 Grandmaster, 1.8 to 525 mhz, but that's a little
more money, $169

After doing some research, I found the Diamond SX-600, which does the same as the MFJ874 for the same price ($159 at Texas Towers). I think I'll spend a couple extra dollars and pick one of them up.

My personal opinion - "Don't fix it if it ain't broken!" :)

Those SWR measurments are fine and you're not going to get any noticable
improvements in your tx or rx signals by flattening out the SWR's.

1642. Re: 756 Pro - Buy now or wait?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 03:19:30 UTC
From: Ed Cregger <nm2k@arrl.net>
Message-ID: <tmet4djrhfok10@corp.supernews.com>
Source record: 56346
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

So I ask you, or anyone else, where is the new technology
that wasn't available when the original 756 Pro was
introduced?

What? There isn't any?

Then why didn't they put the new rig's features in the
original? Do you mean they are doing this just to get you
people that just have to have the latest thing to buy the
new rig?

But what about the resale value of the original Pro? What
about the people that own the originals and who spent nearly
$3000 on a radio that is now obsolete, for no reason? You
say Icom doesn't give a damn about these people? Apparently
not. Gee, guess who usually buys the latest Icom equipment?
Duh!

I can understand updating a radio if some new technology
becomes available, but what they are doing is just a game to
milk the assholes with the I-gotta-have-the-latest mindset.
Icom can kiss my ass.

Fool me once, shame on you. Fool me twice, shame on me.

This marketing strategy works on teenagers and very young
adults. A year or two seems like an eternity to them. But, I
ask you, how many teenagers and young adults have the
disposable income to participate in this type of buying?
Most of the buyers are middle-aged teenagers. Oops, I think
I may have answered my own question. <G>

Well said Ed....I am still poking along with the new TS450S / AT I bought back in Aug-1995......so far I haven't needed DSP or any of the other 'great and powerful innovations' that have come down the hf rig pike since.

I wouldn't mind having a TS870 but it is only because it has an arched s-meter and I really hate the horizontal meter in the 450. I suppose though I can live without it and pocket the $2000+ savings....

From: Scott <hml59@yahoo.com>
Message-ID: <3B67A10A.48EEC1EA@yahoo.com>
Source record: 56249

Hello there,
I would like to know how does PT2500A works..
From the spec sheet, looks like excellent one with chimney, cage fan,
1500W output, but it did not last long..
Even B&W took PT2500A model from Viewstar and some enhancement(?), I was
told that, there were still arc problem on bandswitch and more..

Is it wortth to take used PT2500A? B&W model is better than Viewstar?
Or what amp which used 2 x 3-500Z is a wise choice??

Thanks in advance for your opinion..

From: ai928@FreeNet.Carleton.CA
Message-ID: <9k7t9h$7dk$1@freenet9.carleton.ca>
Source record: 56250

Hi.

I have an old ALINCO ALR-206T that I am using with
a power supply as a base station.

If I turn off the ALINCO's power switch for more
than a few seconds (but keep the power supply on),
then turn it back on, the frequency is reset to
0.000 and the memory is gone.

I have a user's manual and a schematic, but these
do not seem to indicate any obvious battery to
replace for memory retention. Also, I did not
see one when I opened the case.

Has anyone else experienced this problem? Do you
know the fix? If there is a battery to replace,
exactly where is it located?

Please CC: your reply to va3pu@rac.ca (alias
for ai928@freenet.carleton.ca)

TNX ES VY 73,
Ed (VA3PU).

Icom is following the same marketing formula as some higher end
electronics manufacturers, such as those selling stereo equipment such
as Yamaha. Every 18 months or so the equipment is "updated" and those
compulsive enough to have to have the newest and greatest have to go
back and trade up.

Forget it. There is no need to always buy the latest and greatest,
whether it is stereos, software, or ham radio equipment. Figure out
how often you are willing and able to upgrade, say, every 5 years or
so, and then buy the best you can on that time schedule. Then,
regardless of what comes out in the interim, wait out your 5 years
again.

You don't buy a new car every year, do you?

well, i bought a 941E today.some bands works great!!! but in some, it just does not work whatever i !@#$@. so i opened it and guess what i found. the antenna adj cap plates were barely touching each other. if a little pressure against the knob is applied upward, it will tune great and faster on all bands. but as soon as i let pressure off the needles goes bonkers. another place to check if you are having problems tuning.
have fun,
nes KF6DR

Your SWR meter probably has a measuring uncertainty as great as
your divergencies from 1-to-1. SWR meters cause more troubles than
they cure. They don't even measure SWR. Just ignore it, erect the
antenna, switch on and call CQ.

> original?

This is not unusual. Design work is always in a state of change (even if the technology hasn't changed) as units get fielded to users and reports and comments get back to the engineers. One of the challenges in managing a design project is to get the engineers to stop making changes so you can get the thing to market. If you waited until they were satisfied that it was absolutely the best it could be, no one would ever be able to purchase one.

Even the TenTec Jupiter with it's DSP in FLASH will someday be left behind. The DSP is only a portion of the total radio. FLASH is good in that it gives them a way to fix minor bugs and implement minor changes but my experience is that it won't be long until there is a new hardware platform (RF section, etc) and you won't be seeing regular FLASH updates available for the old version hardware.

Bob, I could design a radio (I'm not an engineer) with the latest and greatest features that would be marketable for four to five years at a shot. Most likely, so could you. What they are doing is appealing to a certain personality type and it stinks.

I am not anti progress, I don't long for the days of glowing tubes and drifty signals. I'm not a Luddite by any stretch of the imagination. I AM for taking care of one's customers and respecting their finances. Not appealling to the obsessive/compulsive types among them to keep the company afloat and the rest be damned. At least the other companies keep a model in production long enough for the buyer to use it for a while and then sell it at a fair price. Icom does not do that. THAT is what I'm talking about.

It is their company and they can do as they please. This is my opinion and I'll post it frequently. No one has to read it. No one has to agree. But anyone that bought the original IC-706 (and now the Mk.II) knows where I'm coming from.

Two of the four "completely satisfied" auctions involved radio related items. And, since I mentioned that, two of the three auctions where I've been robbed (paid, no item) involved software items (software also amounted for a good number of the misled auctions also). If I ever bid again, it will not be for software.

The best auction of all was for a suntan bed. Not only did I get a good deal, but the seller and his wife delivered from a nearby state (they wanted to visit the beach). After the delivery, we all went to dinner and had a great time driving around town looking at the sites. Just plain nice people.

You seem to know more than anyone else I've talked to about it, so here's another question for you: :-)

There are two switches in the upper right. One is simplex/duplex+/duplex-. The other one (from memory) is labelled dup1/dup2. Do you know what it does?

Legit ham radio? Never. They'll always find some way to tie themselves to the CBer. If you don't believe me, take a look at the front panel of that recently much-touted RCI-2985, allegedly a new 10- and 12-meter "base" rig.

Look at the far-right hand control -- the mode switch. Hmmm, what's that last position on this "dedicated" amateur transceiver?

http://rangerusa.com/closeup2985lores.jpg

Who ya foolin' RCI? Breaker 27.185 good buddy!

ITHACA, NY The Tompkins County Amateur Radio Club announces the Finger Lakes HAM-IN (hamfest and fly-in) at Tompkins County Airport (KITH), 3 miles NE of Ithaca on Route 13, on Saturday August 4, 2001.

Vendor setup starts at 6 AM (inquire for Friday night setup time).
Doors open to the public at 7 AM Saturday morning.
Hamfest closes at 2 PM Saturday afternoon.
Large hangar for indoor vendors and displays.
Drive-in setup.
Paved outdoor flea market and parking.
Aviation displays - fly in and show your plane for free!
Breakfast and lunch served by Boy Scouts.
Admission: $5.00 at the door, $4 in advance until 7/15/2001.
Indoor tables: $10.00.
Outdoor space $2.00 each.
Under 18 free.
ARRL sanctioned. VE exams, as always walk-ins welcome at tests.
Talk-in on 146.970- AF2A repeater.

More info, including a PDF format flyer, is available on the club website at

http://www.compcenter.com/~tcarc/

For more info contact Richard Spingarn 607-387-5251 or email richard@eagleprint.com.

Enjoy 'old' classics (TS-930S, IC-751A, ...) for just a fraction of the cost of 'new' rigs. You will be happy for a long time and will not worry about losing money... and in case they fail, YOU can work on them while learning a lot by reading the Service Manuals. This is worth 1000 DSP-ized QSOs!

Just my 0.02 Euro worth, as usual.

JOSE - a 33 years old OM ;-)

Uh, maybe.....they're trying to address what they feel are shortcomings in previous offerings.

Perhaps they're actually listening to those of us who actually use their equipment, and they are REACTING
for a NICE change.

Just like in the software business, bugs are fixed, and a new version goes out. People either upgrade or they
don't. For a whole raft of different reasons.

I bought my new 756pro yesterday. And....I love it as is so far. ;-)

It's exactly what I thought it would be...and even a bit better. Just wish it was about $500 cheaper.

In the next few years as the sunpsot cycle declines they will dump these radios in the Asian markets like Indonesia. On the next cycle upswing we will all be driven of the bands by all the Indonesian FM carriers. Just as it is now happening on 10 and 12 meters. The funny thing is that if you listen on 27mhz in the Asia Pacific region you will not find these FMers there. You will all find them on 28mhz. What this indicates is that these radios have been dumped as ham radios to these pirates. If you dont believe me just try one of the Java web receivers. Well we all could argue that all ham radios can be used to transmit on the ham bands, but how many pirates can afford spending at least US$1000 and up, when the average wage is about $250 US dollars a year in these Aisian countries.

What have they done on the Pro to improve things? Nothing except fix minor design flaws and tailor the radio based on user feedback. Yes WOW they have added a recorder as if that is something new from the space program. Icom must think everybody is a sucker.

And besides, once you get addicted to SWR fiddling, you'll never be satisfied as long as there's any visible needle movement. You're getting the best performance you're likely to see, and any trimming at this point would be more just to satisfy the urge to see how low you can get it, than to improve actual performance.

That said, if you do cut, do it in tiny increments. Never more than 3/8" at a time, and I usually prefer to go in 1/8" chunks unless the whip-base joint has enough adjustment room to correct for a larger overcut.

Tell him to watch an episode of "South Park" and count how many times they say
"asshole" or "dick". It might send his tender little heart into shock. :)

I can't say as to this specific model of radio, but MOST ALL mods
to HF equipment open up the transmit on all frequencies... This is
to facilitate operations for MARS and CAP radio geeks. I would
say that your radio would be the same.

Anyone know of a source of good RFI-clean ATX-type computer power supplies?

I have a couple of home-brew type computers that have supplies that
kill everything up to 10 MHz. I'd like to get cleaner supplies
in them. The current ones are "generic/no names"

1675. F.S.: Ten-Tec SP-325 general coverage receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 17:51:14 UTC
From: dslosty@pipeline.com
Message-ID: <3b684172.1362164@news.pipeline.com>
Source record: 56278

For sale:

An excellent working Ten-Tec SP-325 receiver.

This is the military version of the RX-325 general coverage receiver.
Unlike the RX-325, the SP-325 has crystal ovens for the reference
oscillators for increased stability, plus better I.F. filtering,
including a standard 500Hz filter. It doesn't have a clock/timer
function. Overall, it's rating/performance
is quite a bit higher than the standard RX-325.

As originally supplied to the military, the SP-325 didn't have a
speaker or high level audio amp, just a 600 ohm line level audio
output. However, the previous owner added a Ten-Tec T-kit audio
amp pcb (no holes drilled) and I added a small 2 inch internal
speaker, easily reversible mods.

For a picture and specs on the standard RX-325 (specs
are slightly different on the SP-325) you can go to:
http://www.dxing.com/rx/rx325.htm

The original manual with schematics is included but I don't
have the rack mount brackets.
Asking $350 plus shipping.

Joe is right. To prove it to yourself, set a field strength meter on the hood of your car and measure the field strength at various frequencies over the band. This is the real test of antenna output, and you'll no doubt find there is almost no correlation to SWR.

Even on the HF bands, where SWR varies dramatically with a typical mobile antenna, power variation is negligible from 1:1 to 2:1.

Amazing, but true. Try it!

I just bought a Radio Shack time receiver for $15 and I have it in my
family room with the antenna part about seven feet from the floor. I
receive WWVB ok and I am about 90 miles west of Boston, MA. I suspect
the clock only syncs. at night because the first day I had it on, it
did not show a proper time until the following morning.

Hi I am thinking of buying a Kenwood TM-G707, want something that can cross band repeat. Can it?
Thanks,

I have heard that it has been approved, and although I don't
have the FCC number handy, I did go to their website to verify
it. Now, just sit back and wait for Kenwood to get production
going and distribution channels filled up. I do want one. ;-)

1680. FA: EIGHT(8) BOAT ANCHORS to SELL but PICK-up ONLY!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-01 19:27:23 UTC
From: rlucch2098@aol.com

Hi Guys;
I am selling off many of my Older BoatAnchors. I cannot keep up with them all and I don't have the time or knowledge to restore them the way I would like. I had a few Elmers who were going to help but they've become Silent Keys this year.
ALL THESE RADIOS ARE PICK-UP ONLY in the Long Island, NY area. I could get more if I ship them out but dont have the patience for that "Check is in the Mail" balony :-)
Here are a few items:
